Ten Strategies of a World-
Class Cyber Security

Operations Center

conveys MITRE's
accumulated expertise on
enterprise-grade
computer network

defense. It covers ten key
qualities of leading Cyber
Security Operations

Centers (CSOCs), ranging
from their structure and
organization, to processes

that best enable smooth
operations, to approaches
that extract maximum
value from key CSOC
technology investments.

This book offers
perspective and context
for key decision points in
structuring a CSOC, such

as what capabilities to
offer, how to architect
large-scale data collection
and analysis, and how to

prepare the CSOC team
for agile, threat-based
response. If you manage,

work in, or are standing
up a CSOC, this book is for
you. It is also available on

Create image processing,
object detection and face
recognition apps by

leveraging the power of
machine learning and
deep learning with

OpenCV 4 and Qt 5 Key
Features Gain practical
insights into code for all

projects covered in this
book Understand modern
computer vision concepts

such as character
recognition, image

processing and

modification Learn to use
a graphics processing unit

(GPU) and its parallel

processing power for
filtering images quickly

Book Description OpenCV
and Qt have proven to be

a winning combination for
developing cross-platform
computer vision

applications. By

leveraging their power,

you can create robust
applications with both an

intuitive graphical user

interface (GUI) and high-
performance capabilities.

This book will help you
learn through a variety of

real-world projects on

image processing, face
and text recognition,

object detection, and
high-performance

computing. You'll be able

to progressively build on
your skills by working on

projects of increasing

complexity. You'll begin

by creating an image

viewer application,

building a user interface

from scratch by adding

menus, performing

actions based on key-
presses, and applying

other functions. As you

progress, the book will

guide you through using

OpenCV image processing

and modification functions

to edit an image with

filters and transformation

features. In addition to

this, you'll explore the

complex motion analysis and facial landmark detection algorithms, which you can use to build security and face detection applications. Finally, you'll learn to use pretrained deep learning models in OpenCV and GPUs to filter images quickly. By the end of this book, you will have learned how to effectively develop full-fledged computer vision applications with OpenCV and Qt. What you will learn

Create an image viewer with all the basic requirements

Construct an image editor to filter or transform images

Develop a security app to detect movement and secure homes

Build an app to detect facial landmarks and apply masks to faces

Create an app to extract text from scanned documents and photos

Train and use cascade classifiers and DL models for object detection

Build an app to measure the distance between detected objects

Implement high-speed image filters on GPU with Open Graphics Library (OpenGL)

Who this book is for

This book is for engineers and developers who are familiar with both Qt and OpenCV frameworks and are capable of creating simple

projects using them, but want to build their skills to create professional-level projects using them. Familiarity with the C++ language is a must to follow the example source codes in this book.

John Wiley & Sons This book provides a comprehensive yet accessible guide to running randomized impact evaluations of social programs. Drawing on the experience of researchers at the Abdul Latif Jameel Poverty Action Lab, which has run hundreds of such

evaluations in dozens of countries throughout the world, it offers practical insights on how to use this powerful technique, especially in resource-poor environments. This step-by-step guide explains why and when randomized evaluations are useful, in what situations they should be used, and how to prioritize different evaluation opportunities. It shows how to design and analyze studies that answer important questions while respecting the constraints of those working on and benefiting from the program being evaluated. The book gives concrete tips on issues such as improving the quality of a study despite tight budget constraints, and demonstrates how the results of randomized impact evaluations can inform policy. With its self-contained modules, this one-of-a-kind guide is easy to navigate. It also includes invaluable references and a checklist of the common pitfalls to avoid. Provides the most up-to-date guide to running randomized evaluations of social programs, especially in developing countries Offers practical tips on how to complete high-

quality studies in even the most challenging environments Self-contained modules allow for easy reference and flexible teaching and learning Comprehensive yet nontechnical The All-volunteer Force John Wiley & Sons The Republic of Korea's industrial policy has directed that nation's economy through nearly three decades of spectacular growth. But the authors of this paper maintain that this policy is showing signs of being outmoded. The time has come, the authors argue, for the Korean government to stop managing the economy's structural development and to redefine the responsibilities of business and government. Under this proposed compact, the allocation of resources would shift from the government to the private industrial and financial sectors. The transformation of the government bureaucracy from an ad hoc policy role to one of a transparent and predictable regulator is a key to the success of this undertaking. These new directions would present the government with enormous challenges. Greater competitive discipline and

regulatory oversight would be required. While dealing with the complexities of the transition, the government would have to maintain macroeconomic stability and the momentum of savings and investment. For comparison, the study examines the industrial economies of France, Germany, Japan, and the United States, which underwent similar shifts. *Technology for Success: Computer Concepts* Microsoft Press Forfatterne er selv fortalere for en frivillig hr og stiller sprgsmalet: Kan den professionelle hr vre objektiv, nar beslutninger vedrende militre forhold skal diskuteres?

This two-volume set of LNCS 12463 and LNCS 12464 constitutes - in conjunction with the volume LNAI 12465 - the refereed proceedings of the 16th International Conference on Intelligent Computing, ICIC 2020, held in Bari, Italy, in October 2020. The 162 full papers of the three

proceedings volumes were carefully reviewed and selected from 457 submissions. The ICIC theme unifies the picture of contemporary intelligent computing techniques as an integral concept that highlights the trends in advanced computational intelligence and bridges theoretical research with applications. The theme for this conference is "Advanced Intelligent Computing Methodologies and Applications." Papers related to this theme are especially solicited, addressing theories, methodologies, and applications in science and technology.
