HUMANS AS SELF-CONSTRUCTING LIVING SYSTEMS

Cambridge University Press
In this extensive inquiry into the sources of modern selfhood, Charles Taylor demonstrates just how rich and precious those resources are. The modern turn to subjectivity, with its attendant rejection of an objective order of reason, has led—it seems to many—to mere subjectivism at the mildest and to sheer nihilism at the worst. Many critics believe that the modern order has no moral backbone and has proved corrosive to all that might foster human good. Taylor rejects this view. He argues that, properly understood, our modern notion of the self provides a framework that more than compensates for the abandonment of substantive notions of

rationality. The major insight of Sources of the Self is that modern subjectivity, in all its epistemological, aesthetic, and political ramifications, has its roots in ideas of human good. After first arguing that contemporary philosophers have ignored how self and good connect, the author defines the modern identity by describing its genesis. His effort to uncover and map our moral sources leads to novel interpretations of most of the figures and movements in the modern tradition. Taylor shows that the modern turn inward is not disastrous but is in fact the result of our long efforts to define and reach the good. At the heart of this definition he finds what he calls the affirmation of ordinary life, a value which has decisively if not completely replaced an older conception of reason as connected to a hierarchy based on birth and wealth. In telling the story of a revolution whose proponents have been Augustine, Montaigne, Luther, and a host of others, Taylor's goal is in part to make sure we do not lose sight of their goal and endanger all that has been achieved. Sources of the Self provides a

decisive defense of the modern order and a sharp rebuff to its critics.

"Bad Gypsies" and "Good Roma" in Russia and Hungary Pantheon

Today the United States is a country divided along lines of gender, economic inequality, educational level, and political affiliation. Democrats typically select a different range of matters of serious public concern compared to Republicans. Many Americans describe difficulty in coming to terms with the demands placed on them in their work, communities, and personal lives and achieving satisfaction. The institutional crises that pervade our politics, economy, educational systems, and communities have inspired a contemporary crisis: a widespread inability for many to live as integrated, effective selves in the twenty-first century United States. Drawing on a wide range of historical and contemporary research, *The Lonely Quest* explores the dilemma of constructing the self in the U.S. today.

Self Comes to Mind Routledge

This collection of essays by William J. McGuire covers many of the topics that make up social psychology. Studies of the phenomenal self report how people think about themselves, which characteristics are salient in their sense of self and why. Another series of studies show how people's thought systems are organized to balance logical consistency, realistic coping, and hedonic gratification. Studies of persuasive communication show what kinds of people are most persuadable, how people can be persuaded by Socratic questioning, and how they can be immunized against persuasion. Other chapters report findings on language and thought, history and psychology, and creative techniques.

Identity Technologies Psychology Press
Relating Difficulty offers insight into the nature of difficulty in relationships across a broad range of human experience. Whether dealing with in-laws or ex-spouses, long-distance relationships or power and status in the workplace, difficulty is an all too common feature of daily life. Relating Difficulty brings the academic understanding of relational processes to the everyday problems people face at home and at work. These essays represent a groundbreaking collection of the multidisciplinary conceptual and empirical work that currently exists on the topic. Along with issues such as chronic illness and money problems, contributors investigate contexts of relational difficulty ranging from everyday gossip, the workplace and shyness to more dangerous sexual "hookups" and partner abuse. Drawing on evidence presented in the volume, editors D. Charles Kirkpatrick, Steve Duck, and Megan K. Foley explain how relational problems do not emerge solely from individuals or even from the relationship itself. Instead, they arise from triangles of connection and negotiation between relational partners, contexts, and outsiders. The volume challenges the simple notion that relating difficulty is just about problems with "difficult people" and offers some genuinely novel insights into a familiar everyday experience. This exceptional volume is essential reading for practitioners, researchers and students of relationships across a wide range of disciplines as well as anyone wanting greater understanding of relational functioning in everyday life and at work.

Constructing America A Cultural History Of Psychotherapy

The research reported in this book is unapologetically Meadian. While the work of George Herbert Mead has been of widespread significance, and his name is often cited, there are in fact few empirical studies that have sought to rigorously instantiate his ideas. This is in part because his theory is abstruse and in part because there have been so many divergent interpretations of his theory. The point of departure for the present research is a novel interpretation of Mead. Mead's core problematic, I argue, is how to explain self-reflection, and his answer to this is the theory of the social act. The present research is an attempt to instantiate this reading. This book puts to rest any glorification of postmodernist belief in the local nature of knowledge and context specificity of human cultural acts as a part of the image of fragmented human lives. Human beings are differentiated and hierarchically integrated wholes who regulate their own organization by cultural means. This conceptual deathblow to postmodernist ideologies is done here without denying the reality of context specificity. In fact, all the evidence in this book shows that each and every moment in the touring act is context bound, and hence unique. Yet there is generality operating upon—and creating—that uniqueness. The author's careful development of theoretical insights George Herbert Mead reached in his self-dialogues almost a century ago is a new step in the development of cultural psychology as a *Wissenschaft* aiming at making sense of the human conditions in its generic ways. This itself is an exploring act—one that the social sciences need very much at our present time of abundance of fragmented bits and pieces of information about "the others" that lead

us to search for our own unified selves through invention of new ways for touring.

HOW SOCIAL-SYMBOLIC WORK SHAPES SELVES, ORGANIZATIONS, AND INSTITUTIONS

BRILL

A critique and excavation of sexual confession as the key ritual of twenty-first-century moving image culture, from the banal to the forbidden.

HENRY MILLER AND NARRATIVE FORM

Guilford Press

In this ground-breaking cultural history of psychotherapy, historian and psychologist Philip Cushman shows how the development of modern psychotherapy is inextricably intertwined with that of the United States and how it has changed the way Americans view events and themselves. By tracing our various definitions of the self throughout history, Cushman reveals that psychotherapy is very much a product of a particular time and place—and that it has been fundamentally complicit in creating many of the ills it seeks to assuage.

Explores the therapeutic uses and effects of writing in a post-Freudian age.

A MEMOIR

Central European University Press

Legions of self-help authors rightly urge personal development as the key to happiness, but they typically fail to focus on its most important objective: hardiness. Though that which doesn't kill us can make us stronger, as Nietzsche tells us, few authors today offer any insight into just how to springboard from

adversity to strength. It doesn't just happen automatically, and it takes practice. New scientific research suggests that resilience isn't something with which only a fortunate few of us have been born, but rather something we can all take specific action to develop. To build strength out of adversity, we need a catalyst. What we need, according to Dr. Alex Lickerman, is wisdom—wisdom that adversity has the potential to teach us. Lickerman's underlying premise is that our ability to control what happens to us in life may be limited, but we have the ability to establish a life-state to surmount the suffering life brings us. The *Undeclared Mind* distills the wisdom we need to create true resilience into nine core principles, including: --A new definition of victory and its relevance to happiness --The concept of the changing of poison into medicine --A way to view prayer as a vow we make to ourselves. --A method of setting expectations that enhances our ability to endure disappointment and minimizes the likelihood of quitting --An approach to taking personal responsibility and moral action that enhances resilience --A process to managing pain—both physical and emotional—that enables us to push through obstacles that might otherwise prevent us from attaining our goals --A method of leveraging our relationships with others that helps us manifest our strongest selves Through stories of patients who have used these principles to overcome suffering caused by unemployment, unwanted weight gain, addiction, rejection, chronic pain, retirement, illness, loss, and even death, Dr. Lickerman shows how we too can make these principles function within our own lives, enabling us to develop for ourselves the resilience we need to

achieve indestructible happiness. At its core, *The Undeclared Mind* urges us to stop hoping for easy lives and focus instead on cultivating the inner strength we need to enjoy the difficult lives we all have.

CONSTRUCTING THE SELF

Cambridge University Press

A leading neuroscientist explores with authority, with imagination, and with unparalleled mastery how the brain constructs the mind and how the brain makes that mind conscious. Antonio Damasio has spent the past thirty years researching and revealing how the brain works. Here, in his most ambitious and stunning work yet, he rejects the long-standing idea that consciousness is somehow separate from the body, and presents compelling new scientific evidence that posits an evolutionary perspective. His view entails a radical change in the way the history of the conscious mind is viewed and told, suggesting that the brain's development of a human self is a challenge to nature's indifference. This development helps to open the way for the appearance of culture, perhaps one of our most defining characteristics as thinking and self-aware beings.

Constructing the Self Routledge

This latest book by one of the world's leading protagonists in the field will be welcomed not just by psychologists but by students, academics and professionals interested in social constructionism across a wide range of subjects. *Social Construction in Context* explores the potentials of social constructionist theory when placed in diverse intellectual and practical contexts. It demonstrates the achievements of social constructionism, and what it can now offer various fields

of inquiry, both academic, professional and applied, given the proliferation of the theory across the social sciences and humanities.

Constructing and Healing the Self through Writing Cambridge Scholars Publishing

Imagining the Self, Constructing the Past celebrates the various ways in which the Middle Ages and the Renaissance are adapted, recollected, and represented in our own day and age. Most of the chapters fit broadly into one of three categories: namely, the representation of the self in medieval and early modern history and literature; the recollection and utilization of the past in the Middle Ages and the Renaissance; and the role of the medieval and the early modern in our own society. Overall, the contributions to this volume bear witness to the importance of representation to our understanding of ourselves, each other, and our shared past.

Constructing Social Reality IGI Global

Constructing the Subject traces the history of psychological research methodology from the nineteenth century to the emergence of currently favored styles of research in the second quarter of the twentieth century. Kurt Danziger considers methodology to be a kind of social practice rather than simply a matter of technique. Therefore his historical analysis is primarily concerned with such topics as the development of the social structure of the research relationship between experimenters and their subjects, as well as the role of the methodology in the relationship of investigators to each other in a wider social context. The book begins with a historical discussion of introspection as a research practice and proceeds to an analysis of diverging styles of psychological investigation. There is an

extensive exploration of the role of quantification and statistics in the historical development of psychological research. The influence of the social context on research practice is illustrated by a comparison of American and German developments, especially in the field of personality research. In this analysis, psychology is treated less as a body of facts or theories than a particular set of social activities intended to produce something that counts as psychological knowledge under certain historical conditions. This perspective means that the historical analysis has important consequences for a critical understanding of psychological methodology in general.

Creative and Critical Aspects SUNY Press

Using some of the works of Michel Foucault (1926-1984) as a conversation partner, Valerie Nicolet-Anderson focuses on the manner in which Paul constructs the identity of his audience in his letter to the Romans. In particular, she analyzes how the notions of autonomy and self-agency function for both authors. In this dialogue, Valerie Nicolet-Anderson examines whether Paul can still play a relevant part in contemporary discussions around the notion of identity. The approach to Paul presents a narrative reading of Romans and displays an interdisciplinary hermeneutics which brings together New Testament exegesis and post-modern philosophy. The author constructs a dynamic picture of Paul as engaged in the shaping of the ethos of his communities through various strategies. She highlights Paul's actuality, reflecting the current use of Paul by continental philosophers and invites more interdisciplinary reflection between exegesis and philosophy.

Constructing Realities Harvard University

Press

Widely regarded as the authoritative reference in the field, this volume comprehensively reviews theory and research on the self. Leading investigators address this essential construct at multiple levels of analysis, from neural pathways to complex social and cultural dynamics. Coverage includes how individuals gain self-awareness, agency, and a sense of identity; self-related motivation and emotion; the role of the self in interpersonal behavior; and self-development across evolutionary time and the lifespan. Connections between self-processes and psychological problems are also addressed. New to This Edition *Incorporates significant theoretical and empirical advances.

*Nine entirely new chapters. *Coverage of the social and cognitive neuroscience of self-processes; self-regulation and health; self and emotion; and hypoegeic states, such as mindfulness.

Selected Proceedings from the 36th Annual Medieval and Renaissance Forum Health Communications, Inc.

In today's world, identities are no longer built solely within communities of family, neighbourhood, school and work - the media plays an important role in formulating our identities or constructions of self. This volume brings together the usually segregated areas of interpersonal and mass communication, and also incorporates work from sociology, psychology and women's studies. Each contributor examines our understanding of self both within a specific context of mediated culture and within a specific theoretical framework, such as critical theory, social constructionism and feminism.

Constructing Self-Discovery Learning Spaces Online: Scaffolding and Decision

Making Technologies Oxford University Press

This volume aims to show how southerners have faced their post and constructed a self. The essays in this volume explore the different personal narratives and strategies southern authors have employed to channel the autobiographical impulse and give artistic expression to their anxieties, traumas and revelations, as well as their relationship with the region. With the discussion of different types of memoirs, this volume reflects not only the transformation that this sub-genre has undergone since the 1990s boom but also its flexibility as a popular form of life-writing.

Relating Difficulty SAGE

As an increasing amount of information is made available online, the assumption is that people who visit Web sites will be able to strategize their learning to optimize access to this information. Constructing Self-Discovery Learning Spaces Online: Scaffolding and Decision Making Technologies raises awareness of the strategies supporting self-driven learner efficacy on a number of site types. This book reflects on existing literature about self-discovery learning and what learners need in terms of scaffolding to help them make the right decisions, assess their own level of learning, vet information strategically, collaborate with other learners, and build their own skill sets.

Essays on Southern Life-Writing John Benjamins Publishing

This essential text explores the intersectionality of the self in therapeutic practice, bringing together theoretical foundations and practical implications to provide clear guidance for students and practitioners. Bringing together a collection of insightful and experienced

clinicians, this book examines the ways in which intersectionality influences all phases of clinical and supervisory work, from outreach, assessment, and through to termination. Integrating research with clinical practice, chapters not only examine the theoretical, intersectional location of the self for the therapist, client, or supervisee, but they also consider how this social identity effects the therapeutic process and, crucially, work with clients. The book includes first-hand accounts, case studies, and reflections to demonstrate how interactions are influenced by gender,

race, and sexuality, offering practical ideas about how to work intentionally and ethically with clients. Engaging, informative, and practical, this book is essential reading for students, supervisors, family, marriage, and couple therapists, and clinical social workers who want to work confidently with a range of clients, as well as clinical professionals interested in the role of intersectionality in their work.
