The two volumes of the second edition of the International Handbook of Educational Change comprise a totally new, and updated collection of the most critical and cutting-edge ideas in educational change. Written by the most influential thinkers in the field, these volumes cover educational change at both the theoretical and practical levels. Like the first best selling Handbook, this one will also undoubtedly become an essential resource for people involved in all spheres of education, from classroom teachers, teacher leaders and administrators to educational researchers, curriculum developers, and university professors. No other work provides such a wide-ranging and comprehensive examination of the field of educational change.

The Age of Genius explores the eventful intertwining of outward event and inner intellectual life to tell, in all its richness and depth, the story of the 17th century in Europe. It was a time of creativity unparalleled in history before or since, from science to the arts, from philosophy to politics. Acclaimed philosopher and historian A.C. Grayling points to three primary factors that led to the rise of vernacular (popular) languages in philosophy, theology, science, and literature; the rise of the individual as a general and not merely an aristocratic type; and the invention and application of instruments and measurement in the study of the natural world. Grayling vividly reconstructs this unprecedented era and breathes new life into the major figures of the seventeenth century intelligentsia who span literature, music, science, art, and philosophy--Shakespeare, Monteverdi, Galileo, Rembrandt, Locke, Newton, Descartes, Vermeer, Hobbes, Milton, and Cervantes, among many more. During this century, a fundamentally new way of perceiving the world emerged as reason rose to prominence over tradition, and the rights of the individual took center stage in philosophy and politics, a paradigmatic shift that would define Western thought for centuries to come.

The reality of the fantastic combines a 'new philological' close study of a fifteenth-century Icelandic manuscript compilation of fifteen fornaldarsogur and riddarasogur, AM 343a 4to, with an historically-based analysis of the manuscript's various contents, demonstrating how fictions that are in many respects non-realistic can be made to yield up insights into the real-world concerns and interests of a group of fifteenth-century Icelanders. Both the methodology of this study and its conclusions should interest readers from diverse fields, including literature, history and manuscript studies. (Series:

The formation of states in early modern Europe has long been an important topic for historical analysis. Traditionally, the political and military struggles of kings and rulers were the favoured object of study for academic historians. This book highlights new historical research from Europe's northern frontier, bringing 'the people' back into the discussion of state politics, presenting alternative views of political and social relations in the Nordic countries before industrialisation. The early modern period was a time that witnessed initiatives from people from many groups formally excluded from political influence, operating outside the structures of central government, and this book returns to the subject of contentious politics and state building from below.

STEM Integration in K-12 Education examines current efforts to connect the STEM disciplines in K-12 education. This report identifies and characterizes existing approaches to integrated STEM education, both in formal and after- and out-of-school settings. The report reviews the evidence for the impact of integrated approaches on various student outcomes, and it proposes a set of priority research questions to advance the understanding of integrated STEM education. STEM Integration in K-12 Education proposes a framework to provide a common perspective and vocabulary for researchers, practitioners, and others to identify, discuss, and investigate specific integrated STEM initiatives within the K-12 education system of the United States. STEM Integration in K-12 Education makes recommendations for designers of integrated STEM experiences, assessment developers, and researchers to design and document effective integrated STEM education. This report will help to further their work and improve the chances that some forms of integrated STEM education will make a positive difference in student learning and interest and other valued outcomes.

READING INTO RACISM

Routledge

From the Introduction: We need not be surprised, then, that in the Middle Ages also there were rulers who aspired to supreme political and temporal power. The truly exceptional thing is that in medieval times there were always at least two claimants to the role, each commanding a formidable apparatus of government, and that for century after century neither was able to dominate the other completely, so that the duality persisted, was eventually rationalized in works of political theory and ultimately built into the structure of European society. This situation profoundly influenced the development of Western constitutionalism.

This book examines how feminist movements in Norway and France have politicized rape, pornography and sexual exploitation of women from the 1970s to the present. Through a cross-national comparison, it provides insights into why the fight against rape became top priority for French feminists in the 1970s; what kind of strategies the feminist movements used when politicizing sex and violence; who the opponents of the feminist mobilizations were, and who the allies were; as well as what the feminist movements achieved and what the costs of the battles were. This book provides historical context for contemporary and contentious debates about the tension between feminism and sexual freedom, about sexual liberation and abuse, and about the limits of freedom of expression. This text is relevant for students in history, sociology, health, political science, comparative politics and interdisciplinary gender studies. It is also relevant for researchers and activists who are concerned with the history of

feminism, feminist politics and sexual politics.

This revised edition offers college and university leaders an up-to-date analytical perspective for resolving basic academic issues. He discusses the limits of autonomy, the exercise of academic freedom, the desirability of open admissions, prescribed curricula and collective bargaining. He also investigates such emerging new problems as accountability, corporate interests on campus, and the right to confidentiality; expands on ways to promote equal access and specialized education without undermining the criteria for admission.

This book provides a comprehensive treatment of the role Nordic countries have played as exporters and importers of gender equality policies, and of how Europeanisation has framed the development and harmonisation of legislation and politics between the countries, with global consequences. The diverse range of contributors present the argument that the European Union increasingly exerts influence on Nordic equality policy, without undermining the recent significance of the Nordic countries' gender policy as models for countries all over the world. It demonstrates that differentiation and variation at national and regional levels in the Nordic countries, as well as in Europe in general, matter as much as integrational processes and inner adaptation to EU legislation and international laws. This book explores the limitations of the Europeanisation process and the political diversity of national and regional policies, together with the crucial ways practices in the family life and the labour market concerning gender equality depend on cultural and religious norms and group interests. Nordic Gender Equality Policy in a Europeanisation Perspective is a key text for

ENGLISH IN THE WORLD

Routledge

Economic growth and the creation of wealth have cut global poverty rates, yet vulnerability, inequality, exclusion and violence have escalated within and across societies throughout the world. Unsustainable patterns of economic production and consumption promote global warming, environmental degradation and an upsurge in natural disasters. Moreover, while we have strengthened international human rights frameworks over the past several decades, implementing and protecting these norms remains a challenge. These changes signal the emergence of a new global context for learning that has vital implications for education. Rethinking the purpose of education and the organization of learning has never been more urgent. This book is inspired by a humanistic vision of education and development, based on respect for life and human dignity, equal rights, social justice, cultural diversity, international solidarity and shared responsibility for a sustainable future. It proposes that we consider education and knowledge as global common goods, in order to reconcile the purpose and organization of education as a collective societal endeavour in a complex world.

This book investigates the forms that the aggression and violence of peasant elites could take in early modern Fennoscandia, and their role within society. The contributors highlight the social stratification, inner divisions, contradictions and conflicts of the peasant communities, but also pay attention to the elite as leaders of resistance against the authorities. With the formation of more centralised states, the elites' status and room for agency diminished, but regional and temporal variations were great in this relatively drawn-out process, and there still remained several favourable contexts for their agency. Even though the peasant elite was not a homogenous entity, the chapters in this collection present us one uniting feature – the peasant elites' tendency to assert themselves with an active and aggressive agency, even if this led to very different outcomes.

This book examines the relationship between media and medicine, considering the fundamental role of news coverage in constructing wider cultural understandings of health and disease. The authors advance the notion of 'biomediatization' and demonstrate how health knowledge is co-produced through connections between dispersed sites and forms of expertise. The chapters offer an innovative combination of media content analysis and ethnographic data on the production and circulation of health news, drawing on work with journalists, clinicians, health officials, medical researchers, marketers, and audiences. The volume provides students and scholars with unique insight into the significance and complexity of what health news does and how it is created.
