 Isometric Engineering Drawings
 Isometric projection is a method for visually representing three-dimensional objects in two dimensions in technical and engineering drawings. It is an axonometric projection in which the three coordinate axes appear equally foreshortened and the angle

between any two of them is 120 degrees. Isometric projection - Wikipedia
 The view drawn to the exact scale is known as the Isometric View (Isometric Drawing). While that drawn using the isometric scale is known as the Isometric Projection. Isometric & Non-Isometric Lines

 Piping Isometric drawing is an isometric representation

of single pipe line in a plant. It is the most important deliverable of piping engineering department. Piping fabrication work is based on isometric drawings. Piping Isometric Drawings » The Piping Engineering World In Engineering Drawing, the 'Isometric View / Isometric Projection' and respective 'Orthographic Projection' of machine components are very important practices.

Towards drawing or interpreting the Isometric Views and Orthographic Projections, mental mapping of the various geometric shapes to their projections is very important. Isometric View | Orthographic projection - Engineering Drawing Some Isometric drawings are also called isometric projections. This type of drawing is often used by engineers and illustrators that specialize in technical

drawings. What is an Isometric Drawing? - Definition & Examples ... Isometric drawing, also called isometric projection, method of graphic representation of three-dimensional objects, used by engineers, technical illustrators, and, occasionally, architects. Isometric drawing | Britannica In an isometric drawing, the object's vertical lines are drawn vertically, and

the horizontal lines in the width and depth planes are shown at 30 degrees to the horizontal. When drawn under these guidelines, the lines parallel to these three axes are at their true (scale) lengths. Piping Symbols » The Piping Engineering World The isometric projection of solids like cube, square and rectangular prisms are

drawn directly when their edges are parallel to the three isometric axes. The isometric projection of all other types of prisms and cylinders are drawn by enclosing them in a rectangular box. This method is called Box method.
