These are the proceedings of Eurocrypt 2010, the 29th in the series of European conferences on the Theory and Application of Cryptographic Techniques. The conference was sponsored by the International Association for Cryptologic Research and held on the French Riviera, May 30-June 3, 2010. A total of 191 papers

were received of which 188 were retained as valid submissions. These were each assigned to at least three Program Committee members and a total of 606 review reports were produced. The printed record of the reviews and extensive online discussions that followed would be almost as voluminous as these proceedings. In the end 35 submissions were accepted with two submission pairs being merged to give 33 papers presented at the conference. The final papers in these proceedings were not subject to a second review before publication and the authors are responsible for their contents. The Program Committee, listed on the next page, deserves particular thanks for all their hard work, their outstanding expertise, and their constant commitment to all aspects of the evaluation process. These thanks are of course extended to the very many external reviewers who took the time to help out during the evaluation process. It was also a great pleasure to honor and welcome Moti Yung who gave the 2010 IACR Distinguished Lecture.

Do the antitrust laws have a place in the digital economy or are they obsolete? That is the question raised by the government's legal action against Microsoft, and it is the question this volume is designed to answer. America's antitrust laws were born out of the Industrial Revolution. Opponents of the antitrust laws argue that whatever merit the antitrust laws may have had in the past they have no place in a digital economy. Rapid innovation makes the accumulation of market power practically impossible. Markets change too quickly for antitrust actions to keep up. And antitrust remedies are inevitably regulatory and hence threaten to 'regulate business'. A different view - and, generally, the view presented in this volume - is that antitrust law can and does have an important and constructive role to play in the digital economy. The software business is new, it is complex, and it is rapidly moving. Analysis of market definition, contestability and potential competition, the role of innovation, network externalities, cost structures and marketing channels present challenges for academics, policymakers and judges alike. Evaluating consumer harm is problematic. Distinguishing between illegal conduct and brutal - but legitimate - competition is often difficult. Is antitrust analysis up to the challenge? This volume suggests that antitrust analysis 'still works'. In stark contrast to the political rhetoric that has surrounded much of the debate over the Microsoft case, the articles presented here suggest neither that Microsoft is inherently bad, nor that it deserves a de facto exemption from the antitrust laws. Instead, they offer insights - for policymakers, courts, practitioners, professors and students of antitrust policy everywhere - on how antitrust analysis can be applied to the business of making and marketing computer software.

HOLISTIC EDUCATION: ENACTING CHANGE

Springer

This book reflects the real truth about South Africa today, what people can't tell others and what can't be said. Today SA is

perceived and presented as a holy country that came from evil, which is not true since most people are suffering while leadership fails them. br> This is a book that refers to certain events and issues and compare, relate with honesty the position of the author around such events and issues. It talks of how the author sees the system, areas of governance and how it is done and he goes deep inside of identifying some of those who are at the top and their questionable acts. Government departments fail and are protected to undermine ordinary people intelligence. br> br> This book raises certain issues by taking your mind into an ordinary South African who lives where he is directly affected by the failures of governance because of corruption and power struggle by leadership. The author goes to the level of going into how certain leaders failed the public on executing their duties. br> br> This is not the book that will interest those who follow politics only; it goes further by introducing different topics and how they are mishandled by leaders. For a moment it goes into the ANC leadership and ANC as a political party to see and analyze real issues within. The author presents the view of controversial Julius Malema, and surprisingly presents the side that the media never presented. br> br> The book refers to various topics like politics, the media, traditional communities-laws and practice, the gap between the rich and the poor, xenophobia and many more. The most amazing and interesting angle of traditional communities presented through what is happening in the Bakwena Ba Mogopa Traditional Community who are rich in natural resources. br> br> He observed the most and critical systems that are not benefiting the people, and raising them as a black man with real references since his observation registered whites critics only, and differently present other issues around Land Restitution Corruption/Failures and Government strategy of undermining the rural leadership/communities etc. br> br> SA has been presented as a media free society, where media has freedom to report on different issues and no other platform seems to be there to criticize the media unless if the media itself open a limited debate along its criticism, this book criticizes the media. br> br> Touching on Broad Based Black Economic Empowerment (BBBEE) and its effect, this time it brings a different angle! Be presented with different laws and simple interpretations and how leadership is failing to observe them. br> br> This is a book that everybody needs to have because it is simple and was written to present complex issues differently. You will see as you go by it that ordinary South Africans are being disrespected by leaders and all is not good in SA. br> br> The author has presented views and questions that needs to identify real challenges that SA faces. Why people are so afraid of criticizing the ANC, the media, government and many powerful factors that lead us? This is a book that will bring a good debate to fix some of the problems in SA.

Competition, Innovation and the Microsoft Monopoly: Antitrust in the Digital Marketplace John Wiley & Sons

This is the first EU competition law treatise that fully integrates economic reasoning in its treatment of the decisional practice of the European Commission and the case-law of the European Court of Justice. Since the European Commission's move to a "more economic approach" to competition law reasoning and decisional practice, the use of economic argument in competition law cases has become a stricter requirement. Many national competition authorities are also increasingly moving away from a legalistic analysis of a firm's conduct to an effect-based analysis of such conduct, indeed most competition cases today involve teams composed of lawyers and industrial organisation economists. Competition law books tend to have either only cursory coverage of economics, have separate sections on economics, or indeed are far too technical in the level of economic understanding they assume. Ensuring a genuinely integrated approach to legal and economic analysis, this major new work is written by a team combining the widely recognised expertise of two competition law practitioners and a prominent economic consultant. The book contains economic reasoning throughout in accessible form, and, more pertinently for practitioners, examines economics in the light of how it is used and put to effect in the courts and decision-making institutions of the EU. A general introductory section sets EU competition law in its historical context. The second chapter goes on to explore the economics foundations of EU competition law. What follows then is an integrated treatment of each of the core substantive areas of EU competition law, including Article 101 TFEU, Article 102

TFEU, mergers, cartels and other horizontal agreements and vertical restraints.
