Tools and Applications

John Wiley & Sons
Often the switch to
telecare--technology
used to help caretakers
provide treatment to
their patients off-site--

is portrayed as either a
nightmare scenario or
a much needed
panacea for all our
healthcare woes. This
widely researched
study probes what
happens when
technologies are used
to provide healthcare
at a distance. Drawing
on ethnographic
studies of both patients
and nurses involved in
telecare, Jeannette Pols
demonstrates that
instead of resulting in
less intensive care for

patients, there is instead a staggering rise in the frequency of contact between nursing staff and their patients. Care at a Distance takes the theoretical framework of telecare and provides hard data about these innovative care practices, while producing an accurate portrayal of the pros and cons of telecare.

Extending Children's Thinking SAGE

Shortlisted for the BSA Sociology of Health and Illness Book Prize 2010 What is good care? In this innovative and compelling book, Annemarie Mol argues that good care has little to do with 'patient choice' and, therefore, creating more opportunities for patient choice will not improve health care.

Although it is possible to treat people who seek professional help as customers or citizens, Mol argues that this undermines ways of thinking and acting crucial to health care. Illustrating the discussion with examples from diabetes clinics and diabetes self care, the book presents the 'logic of care' in a step by step contrast with the 'logic of choice'. She concludes that good care is not a matter of making well argued individual choices but is something that grows out of collaborative and continuing attempts to attune knowledge and technologies to diseased bodies and complex lives. Mol does not criticise the practices she

encountered in her field work as messy or ad hoc, but makes explicit what it is that motivates them: an intriguing combination of adaptability and perseverance. The Logic of Care: Health and the problem of patient choice is crucial reading for all those interested in the theory and practice of care, including sociologists, anthropologists and health care professionals. It will also speak to policymakers and become a valuable source of inspiration for patient activists.

Shambhala

55 playful experiments that encourage tinkering, curiosity, and creative thinking—hands-on activities that explore

art, science, and more. For children of all ages, from toddlers to teenagers! The creator of the highly popular creativity site for kids, Tinkerlab.com, now delivers dozens of engaging, kid-tested, and easy-to-implement projects that will help parents and teachers bring out the natural tinkerer in every kid—even babies, toddlers, and preschoolers. The creative experiments shared in this book foster curiosity, promote creative and critical thinking, and encourage tinkering—mindsets that are important to children growing up in a world that values independent thinking. In addition to offering a host of activities that parents and teachers can put to use right

away, this book also includes a buffet of recipes (magic potions, different kinds of play dough, silly putty, and homemade butter) and a detailed list of materials to include in the art pantry.

Health Care Quality

Management John

Wiley & Sons

The Routledge

Handbook of Medical Anthropology provides a contemporary overview of the key themes in medical anthropology. In this exciting departure from conventional handbooks, compendia and encyclopedias, the three editors have written the core chapters of the volume, and in so doing, invite the reader to reflect on the ethnographic richness and theoretical contributions of

research on the clinic and the field, bioscience and medical research, infectious and non-communicable diseases, biomedicine, complementary and alternative modalities, structural violence and vulnerability, gender and ageing, reproduction and sexuality. As a way of illustrating the themes, a rich variety of case studies are included, presented by over 60 authors from around the world, reflecting the diverse cultural contexts in which people experience health, illness, and healing. Each chapter and its case studies are introduced by a photograph, reflecting medical and visual anthropological responses to inequality and vulnerability. An indispensable reference

in this fastest growing area of anthropological study, The Routledge Handbook of Medical Anthropology is a unique and innovative contribution to the field.

Rehabilitation in Practice Springer Nature

This book provides an in-depth investigation into the practices of animal housing systems with international contributions from across the humanities and social sciences. By attending to a range of different sites such as the zoo, the laboratory, the farm and the animal shelter, to name a few, the book explores material technologies from the perspective that these are integrated parts of a larger biopolitical infrastructure and

questions how animal housing systems, and the physical infrastructures that surround central human-animal practices, come into being. The contributions in the book show in various ways how physical infrastructures of animal housing are always part of a much broader sociocultural and political infrastructure, where the material reality of housing systems combines with human and animal agents, with politics, and with practices. As such, the book explores what kind of practices and relations develop around the physical structures of animal housing, and by whom, and for whom, they are developed. This innovative collection

will be of great interest to student and scholars in animal studies, more than human studies, geography, anthropology, and sociology.

On the Closeness of Technology

Duke University Press
 Harness your mind's innate tendency to wander, stall, rest, and unfocus and become more productive—in the boardroom, living room, or classroom. Named one of Coastal Living's Best Books for the Beach This Summer To finish tasks and achieve goals, most people believe that more focus is the solution. We rely on to-do lists, calendar reminders, noise-blocking headphones, and sometimes medication to help us concentrate—even though these tactics

often fail to substantially improve productivity. Drawing on the latest brain research, compelling stories from his psychological practice, and colorful examples of counterintuitive success from sports, business, education, and the arts, neuroscientist Srin Pillay, M.D., challenges traditional ideas about productivity, revealing the lasting, positive benefits of adding deliberate and regular unfocus to your repertoire. A fascinating tour through brain wavelengths and rhythm, mindsets, and mental relaxation, *Tinker Dabble Doodle Try* demonstrates how specific kinds of planned unfocus stimulate cognitive calmness, jumpstart

productivity, enhance innovation, inspire creativity, improve long-term memory, and, of course, help you stay on target. Tinkering with ideas and with things releases your mind to wander from a state of stuckness into a possibility frame of mind, triggering neural connections and new insights. Dabbling in a new endeavor—whether a hobby or fantasy—disrupts your habitual and reactive thinking, helping you find new solutions to old problems. Doodling can help you tap into another brain frequency to remove obstacles and create opportunities and inspiration. With techniques for training the brain to unfocus, concepts for

scheduling busy lives, and ideas for controlling this new cognitive-toggling capability, Tinker Dabble Doodle Try will change how you think about daydreaming, relaxing, leaving work unfinished, and even multitasking. What you'll discover is a greater freedom, a deeper intelligence, and a more profound joy in your life. Praise for Tinker Dabble Doodle Try "Pillay's effortless writing style, combined with an excellent balance of popular psychology and self-help, makes this a helpful read for those who enjoy a light dive into psychology with practical applications."—Library Journal "Pillay cites an intriguing range of brain studies to support his argument,

and his case studies of individuals with whom he has worked provide useful insights.”—Kirkus Reviews “Dr. Srin Pillay offers a brilliant, deeply researched, and even more deeply imagined blueprint for using one’s full mental armamentarium, conscious, unconscious, and all the undiscovered rest! A fantastic book!”—Edward M. Hallowell, M.D., co-author of *Delivered from Distraction* “Dr. Pillay’s new book will help you create a new, fun, more playful destiny and unlock your brain’s inner potential.”—Daniel G. Amen, M.D., co-author of *The Brain Warrior’s Way* “This book not only gives you license to step off the hamster wheel of focus, focus,

focus, but it will show you how to strategically and productively do so.”—JJ Virgin, author of *JJ Virgin’s Sugar Impact Diet* “This brilliant book shows how to manipulate your brain to alternate between intense concentration and deliberate mind-wandering.”—Mark Robert Waldman, co-author of *How God Changes Your Brain*

Institutions and Relational Practices
Springer

This is a book on how home is made when care enters the lives of people as they grow old at home or in ‘homely’ institutions. Throughout the book, contributors show how home is a verb: it is something people do. Home is thus always in the making, temporal, contested, and open to

negotiation and experimentation. By bringing together approaches from STS, anthropology, health humanities and health care studies, the book points to the importance of people's tinkering and experiments with making home, as it is here that home is being made and unmade.

Use, Disclosure, and Privacy Weldon Owen International

This book shows researchers how ethnography can be carried out within human service settings, providing an invaluable guide on how to apply ethnographic creativeness and offering a more humanistic and context-sensitive approach to generating

valid knowledge about today's service work. *The SAGE Handbook of Aging, Work and Society* National Academies Press Architecture is hard stuff. It is formed by walls, roofs, floors, all components of hard materials, stone, glass and wood. It distributes people in space and directs their doings and movements.

Institutions are even harder stuff. Order is pushed a step further by the coerciveness of discursive architectural models and caring practices, restricting options to certain ways of thinking and acting. This book illuminates how people and spaces negotiate, and often challenge, regularities and patterns embedded in the meeting between architecture and

institutions. It contains a number of essays by authors from disciplines such as human geography, architecture, planning, design, social work and education. The contributions discuss different examples from institutions in which care is carried out, such as assisted living facilities, residential care for children, psychiatric care facilities, hospitals, and prisons. By adopting a non-representational perspective, emergent practices render visible capacities of being flexible and mouldable, in which institutional architecture is defied, contested and transformed. New situations appear which transgress physical space in partnership with those

who populate it, whether humans or non-humans. This book reveals the relational and transformative conditions of care architecture and the ways in which institutions transform (or not) into caring architecture.

Unpalatable Politics

Text Publishing

A new and expanded edition of one of the decade's most influential education books. In this practical guide, Sylvia Martinez and Gary Stager provide K-12 educators

with the how, why, and cool stuff that supports making in the classroom, library, makerspace, or anywhere learners learn.

SOCIAL LIVES OF MEDICINES

Policy Press
Eminent moral philosopher Michael Slote argues that care ethics presents an important challenge to other ethical traditions and that a philosophically developed care ethics should, and can, offer its own comprehensive view of the whole of morality. Taking inspiration from British moral sentimentalism and drawing on recent psychological literature on empathy, he shows that the use of that notion allows care ethics to develop its

own sentimentalist account of respect, autonomy, social justice, and deontology. Furthermore, he argues that care ethics gives a more persuasive account of these topics than theories offered by contemporary Kantian liberalism. The most philosophically rich and challenging exploration of the theory and practice of care to date, *The Ethics of Care and Empathy* also shows the manifold connections that can be drawn between philosophical issues and leading ideas in the fields of psychology, education, and women's studies. *Tinkering Care Moves* John Wiley & Sons
This ethnography takes the reader into the Australian suburbs to

learn about food, eating and bodies during the highly political context of one of Australia's largest childhood obesity interventions. While there is ample evidence about the number of people who are overweight or obese and an abundance of information about what and how to eat, obesity remains 'a problem' in high-income countries such as Australia. Rather than rely on common assumptions that people are making all the wrong choices, this volume reveals the challenges of 'eating healthy' when money is scarce and how, different versions of being fat and doing fat happen in everyday worlds of precarity. Without acknowledgement of

the multiple realities of fatness and obesity, interventions will continue to have limited reach.

Critical Perspectives

Ballantine Books

Across the life course, new forms of community, ways of keeping in contact, and practices for engaging in work, healthcare, retail, learning and leisure are evolving rapidly. This book examines how developments in smart phones, the Internet, cloud computing, and online social networking are redefining experiences and expectations around growing older in the twenty-first century. Drawing on contributions from leading commentators and researchers across the world, this book explores key themes

such as caregiving, the use of social media, robotics, chronic disease and dementia management, gaming, migration, and data inheritance, to name a few.

Health and the Problem of Patient Choice

Cambridge University Press
This book provides a much-needed account of informal community-based approaches to working with mental distress. It starts from the premise that contemporary mainstream psychiatry and psychology struggle to capture how distress results from complex embodied arrays of social experiences that are embedded within specific historical, cultural, political and economic settings. The authors challenge

mainstream understandings of mental health that position a naive public in need of mental health literacy. Instead it is clear that a considerable amount of invaluable mental distress work is undertaken in spaces in our communities that are not understood as mental health treatments. This book represents one of the first attempts to position these kinds of spaces at the center of how we understand and address problems of mental distress and suffering. The chapters draw on case studies from the UK and abroad to point toward an exciting new paradigm based on informal community and socially oriented approaches to mental health. Written in an

unusually accessible and engaging style, this book will appeal to social science students, academics, practitioners and policy makers interested in community and social approaches to mental health.

INVENT TO LEARN

Routledge
In *Cooking Data* Crystal Biruk offers an ethnographic account of research into the demographics of HIV and AIDS in Malawi to rethink the production of quantitative health data. While research practices are often understood within a clean/dirty binary, Biruk shows that data are never clean; rather, they are always “cooked” during their production and inevitably entangled with the lives of those

who produce them. Examining how the relationships among fieldworkers, supervisors, respondents, and foreign demographers shape data, Biruk examines the ways in which units of information—such as survey questions and numbers written onto questionnaires by fieldworkers—acquire value as statistics that go on to shape national AIDS policy. Her approach illustrates how on-the-ground dynamics and research cultures mediate the production of global health statistics in ways that impact local economies and formulations of power and expertise. [Building a New Community Psychology of Mental Health](#)
Routledge

For over a century, Americans have translated their cultural anxieties and hopes into dramatic demands for educational reform. Although policy talk has sounded a millennial tone, the actual reforms have been gradual and incremental. Tinkering toward Utopia documents the dynamic tension between Americans' faith in education as a panacea and the moderate pace of change in educational practices. In this book, David Tyack and Larry Cuban explore some basic questions about the nature of educational reform. Why have Americans come to believe that schooling has regressed? Have educational reforms occurred in cycles, and

if so, why? Why has it been so difficult to change the basic institutional patterns of schooling? What actually happened when reformers tried to reinvent schooling? Tyack and Cuban argue that the ahistorical nature of most current reform proposals magnifies defects and understates the difficulty of changing the system. Policy talk has alternated between lamentation and overconfidence. The authors suggest that reformers today need to focus on ways to help teachers improve instruction from the inside out instead of decreeing change by remote control, and that reformers must also keep in mind the democratic purposes

that guide public education.

CARE IN PRACTICE

Routledge

Regional health care databases are being established around the country with the goal of providing timely and useful information to policymakers, physicians, and patients. But their emergence is raising important and sometimes controversial questions about the collection, quality, and appropriate use of health care data.

Based on experience with databases now in operation and in development, Health Data in the Information

Age provides a clear set of guidelines and principles for exploiting the potential benefits of aggregated health data--without jeopardizing confidentiality. A panel of experts identifies characteristics of emerging health database organizations (HDOs). The committee explores how HDOs can maintain the quality of their data, what policies and practices they should adopt, how they can prepare for linkages with computer-based patient records, and how diverse groups from researchers to health care administrators might use aggregated data. Health Data in the Information Age offers frank analysis and guidelines that will be invaluable to anyone

interested in the operation of health care databases. *Big Questions for Young Minds World Scientific*

Some of the most creative artists from today's maker scene discuss their process, workspaces and more in this inspiring guide to tinkering. *The Art of Tinkering* is an unprecedented celebration of what it means to tinker: to take things apart, explore tools and materials, and build wondrous, wild art that's part science, part technology, and entirely creative. Join 150+ makers as they share the stories behind their beautiful and bold work—then do some tinkering yourself! This collection of exhibits, artwork, and projects

explores a whole new way to learn, in which people expand their knowledge through making and doing, working with readily available materials, getting their hands dirty, collaborating with others, and problem-solving in the most fun sense of the word. Each artist featured in *The Art of Tinkering* shares their process and the backstory behind their work. Whether it's discussing their favorite tools (who knew toenail clippers could be so handy?) or offering a glimpse of their workspaces (you'd be amazed how many electronics tools you can pack into a pantry!), the stories, lessons, and tips in *The Art of Tinkering* offer a fascinating portrait of today's maker scene.

Artists include: Scott Hunkin, AnnMarie
 Weaver, Arthur Thomas, Ranjit
 Ganson, Moxie, Tim Bhatnajar and Jie Qi.
