Raises two important and related issues: the changing social aspects of math and the quality of math schemes and textbooks. Math is no longer a subject studied by intellectuals but has become a subject for study by all children aged 5 to 16 years. The continuing failure of many children in this subject is cause for concern. Dowling critically examines textbooks, and the part they play in children's learning. He clearly shows the

reader how to analyze and evaluate textbooks they are currently using. This interrogation of classroom resources has important implications for teaching strategies and for textbook design and use.

*Mathematical Proof of Implausible Ideas*  
Disney Press

The Basics of Computer Arithmetic Made Enjoyable and Accessible-with a Special Program Included for Hands-on Learning  
"The combination of this book and its associated virtual computer is fantastic! Experience over the last fifty years has shown me that there's only one way to truly understand how computers work; and that is to learn one computer and its instruction set-no matter how simple or primitive-from the ground up. Once you fully comprehend how that simple

computer functions, you can easily extrapolate to more complex machines." -Fred Hudson, retired engineer/scientist  
"This book-along with the virtual DIY Calculator-is an incredibly useful teaching and learning tool. The interesting trivia nuggets keep you turning the pages to see what's next. Students will have so much fun reading the text and performing the labs that they won't even realize they are learning." -Michael Haghighi, Chairperson of the Business and Computer Information Systems Division, Calhoun Community College, Alabama  
"At last, a book that presents an innovative approach to the teaching of computer architecture. Written with authority and verve, witty, superbly illustrated, and enhanced with many

laboratory exercises, this book is a must for students and teachers alike." -Dr. Albert Koelmans, Lecturer in Computer Engineering, University of Newcastle upon Tyne, UK, and the 2003 recipient of the EASIT-Eng. Gold Award for Innovative Teaching in Computer Engineering  
Packed with nuggets of information and tidbits of trivia, How Computers Do Math provides an incredibly fun and interesting introduction to the way in which computers perform their magic in general and math in particular. The accompanying CD-ROM contains a virtual computer/calculator called the DIY Calculator, and the book's step-by-step interactive laboratories guide you in the creation of a simple program to run on your DIY Calculator. How Computers Do Math can be enjoyed by non-

technical individuals; students of computer science, electronics engineering, and mathematics; and even practicing engineers. All of the illustrations and interactive laboratories featured in the book are provided on the CD-ROM for use by high school, college, and university educators as lecture notes and handouts. For online resources and more information please visit the author's website at [www.DIYCalculator.com](http://www.DIYCalculator.com).

*Mathematical Visualization in Art and Education* SIAM

Recent progress in research, teaching and communication has arisen from the use of new tools in visualization. To be fruitful, visualization needs precision and beauty. This book is a source of mathematical illustrations by

mathematicians as well as artists. It offers examples in many basic mathematical fields including polyhedra theory, group theory, solving polynomial equations, dynamical systems and differential topology. For a long time, arts, architecture, music and painting have been the source of new developments in mathematics. And vice versa, artists have often found new techniques, themes and inspiration within mathematics. Here, while mathematicians provide mathematical tools for the analysis of musical creations, the contributions from sculptors emphasize the role of mathematics in their work.

The role of minority and women mathematicians in developing our American mathematical community is an important but previously under-told story. Pat Kenschaft, in her highly readable and entertaining style, fills this knowledge gap. This valuable book should be in your personal library --

Donald G. Saari, University of California, Irvine Kenschaft reveals the passions that motivated past and present mathematicians and the obstacles they overcame to achieve their dreams. Through research and in-depth personal interviews, she has explored the sensitive issues of racism and sexism, rejoicing in positive changes and alerting us to issues that still need our attention. --Claudia Zaslavsky, the author of Africa Counts and other books on equity issues in mathematics education. Based on dozens of interviews and extensive historical research, this entertaining book relates stories about mathematicians who have defied stereotypes. It is spiced with interesting photographs. The five chapters about women provide insight into the

nineteenth century, the mid-twentieth century, the early 1970s, the early 1990s, and 2004. Activists in many fields can take heart at the changes. The author documents trends from the rudimentary struggles simply to become professionals, to the freedom to be married without giving up a career entirely, to organizing to eliminate the most flagrant discrimination, to efforts to improve the daily treatment of women in the professional community, to widespread efforts toward true equity. The stories of African Americans in mathematics include that of Benjamin Banneker, an eighteenth century American who had three grandparents born in Africa. Banneker helped design Washington, D.C. and made the computations for almanacs that

succeeded Benjamin Franklin's. Next follow stories about other African American mathematicians who were students and faculty in late nineteenth century colleges. Stories of several efforts to integrate the mathematical community in the mid-twentieth century indicate that some were more successful than others, but all were difficult. The book concludes with a happier chapter about five black mathematicians in the early twenty-first century. Five interviews with leading Latino American mathematicians are included, along with a report of a survey of Latino research mathematicians in the Southwest. A skilled story-teller with good stories to tell has produced a page-turner that all mathematicians should read, as well as others concerned with equity --and they

will enjoy their reading.

## **BEST BOOKS FOR CHILDREN**

American Mathematical Soc.

In this volume of 15 articles, contributors from a wide range of disciplines present their analyses of Disney movies and Disney music, which are mainstays of popular culture. The power of the Disney brand has heightened the need for academics to question whether Disney's films and music function as a tool of the Western elite that shapes the views of those less empowered. Given its global reach, how the Walt Disney Company handles the role of race, gender, and sexuality in social structural inequality merits serious reflection according to a number of the articles in the volume. On the other hand, other authors argue that

Disney productions can help individuals cope with difficult situations or embrace progressive thinking. The different approaches to the assessment of Disney films as cultural artifacts also vary according to the theoretical perspectives guiding the interpretation of both overt and latent symbolic meaning in the movies. The authors of the 15 articles encourage readers to engage with the material, showcasing a variety of views about the good, the bad, and the best way forward.

*Math Curse* Routledge

A journey through a land where Milo learns the importance of words and numbers provides a cure for his boredom.

## CONFRONTING THE LEARNING CRISIS IN MATHEMATICS AND SCIENCE

Springer Science & Business Media  
Shows how to use a variety of children's books as a basis for activities in writing, art, science, and math  
Succeed with Math Princeton University Press

A brave mouse, a covetous rat, a wishful serving girl, and a princess named Pea come together in Kate DiCamillo's Newbery Medal-winning tale. Welcome to the story of Despereaux Tilling, a mouse who is in love with music, stories, and a princess named Pea. It is also the story of a rat called Roscuro, who lives in the darkness and covets a world filled with light. And it is the story of Miggery

Sow, a slow-witted serving girl who harbors a simple, impossible wish. These three characters are about to embark on a journey that will lead them down into a horrible dungeon, up into a glittering castle, and, ultimately, into each other's lives. What happens then? As Kate DiCamillo would say: Reader, it is your destiny to find out. With black-and-white illustrations and a refreshed cover by Timothy Basil Ering.

**Reading and Writing the World with Mathematics** John Wiley & Sons  
Intended to support the national initiative to strengthen learning in areas of science, technology, engineering, and mathematics, this book helps librarians who work with youth in school and public libraries to build better collections and more effectively use these collections

through readers' advisory and programming. • Introduces more than 500 STEM resource suggestions for toddlers to young adults • Highlights more than 25 detailed library program or activity suggestions to be paired with STEM book titles • Provides resource suggestions for professional development • Contains bonus sections on STEM-related graphic novels, apps, and other media

ASCD

While visiting the Kingdom of Wei-Ling, James and Prince Jin set off to search for the legendary treasure of the Jade Jaguar but soon find themselves trapped in the jaguar's den. It's up to Sofia, Amber, Princess Jun, and a very special Disney

Princess to rescue their families! This beautifully illustrated picture book is based on a special episode featuring Mulan airing on Disney Junior in Summer 2014, and comes with a bonus downloadable song, "Stronger Than You Know," from the episode!

USA Today Montréal : Cinar

At the Animal Rescue Friends shelter, everyone is looking for a way to belong--kids and animals alike. From Epic! Originals, Animal Rescue Friends is a heartwarming, three-book graphic novel series filled with humor and furry friendships. Welcome to Animal Rescue Friends, where any stray can find a friendly face--furry or otherwise. This first collection of middle-grade comics includes five tales of found family: A lonely girl living in the suburbs finds

happiness with a stray pit bull; a protective mama ferret and her six kits learn to trust a shelter volunteer; a shy boy stands up for himself with the help of a strong-willed bunny; a cantankerous cat helps to mend a troubled relationship; and the shelter's unofficial mascot eventually finds a home. Perfect for animal-loving kids, this adorable comics series will inspire and uplift.

*The Essentials of Mathematics, Grades 7-12* Westport, Conn. : Libraries Unlimited

Mathematics education in the United States can reproduce social inequalities whether schools use either "basic-skills" curricula to prepare mainly low-income students of color for low-skilled service

jobs or "standards-based" curricula to ready students for knowledge-intensive positions. And working for fundamental social change and rectifying injustice are rarely included in any mathematics curriculum. Reading and Writing the World with Mathematics argues that mathematics education should prepare students to investigate and critique injustice, and to challenge, in words and actions, oppressive structures and acts. Based on teacher-research, the book provides a theoretical framework and practical examples for how mathematics educators can connect schooling to a larger sociopolitical context and concretely teach mathematics for social justice.
