STOUT LETICIA

Cryptographic Security Solutions for the Internet of Things

Springer Science & Business Media

This book constitutes the proceedings of the 22nd Conference on Passive and Active Measurement, PAM 2021, which was planned to be held in Cottbus, Germany, in March 2021. Due to the Corona pandemic, the conference was organized as a virtual meeting. The 33 full papers presented in this volume were carefully reviewed and selected from 75 submissions. They were organized in topical sections named: COVID-19; web security; video streaming; TLS; staying connected; DoS; performance; network security; DNS; capacity; and exposing hidden behaviors. Due to the Corona pandemic, PAM 2021 was held as a virtual conference.

Cryptographic Security Solutions for the Internet of ThingsIGI Global

22nd International Conference, PAM 2021, Virtual Event, March 29 – April 1, 2021, Proceedings IGI Global

The Internet of Things is a technological revolution that represents the future of computing and communications. Even though efforts have been made to standardize Internet of Things devices and how they communicate with the web, a uniform architecture is not followed. This inconsistency directly impacts and limits security standards that need to be put in place to secure the data being exchanged across networks. Cryptographic Security Solutions for the Internet of Things is an essential reference source that discusses novel designs and recent developments in cryptographic security control procedures to improve the efficiency of existing security mechanisms that can help in securing sensors, devices, networks, communication, and data in the Internet of Things. With discussions on cryptographic algorithms, encryption techniques, and authentication procedures, this book is ideally designed for managers, IT consultants, startup companies, ICT procurement managers, systems and network integrators, infrastructure service providers, students, researchers, and academic professionals.

Passive and Active Measurement Cryptographic Security Solutions for the Internet of Things The 2009 edition of the Passive and Active Measurement Conference was the tenth of a series of successful events. Since 2000, the Passive and Active M- surement (PAM) conference has provided a forum for presenting and discussing innovative and early work in the area of Internet measurement. This event - cuses on research and practical applications of network measurement and an- ysis techniques. The conference's goal is to provide a forum for current work in its early stages. This year's conference was held at Seoul National University in Seoul, the 600-year-old capital of Korea. PAM 2009 attracted 77 submissions. Each paper was carefully reviewed by at least three members

of the Technical Program Committee. The reviewing process led to the acceptance of 22 papers and 2 demos. Demos are a novelty of this year's PAM. The goal of demos is to present measurement tools, which can be so useful for our community. The papers and demos were arranged into nine sessionscoveringthefollowingareas:routingandforwarding;topologyanddelay; methods for large-scale measurements; wireless; management tools; audio and videotra?c;peer-to-peer;tra?cmeasurements;andmeasurementsofanomalous andunwantedtra?c.Thetechnicalprogramoftheconferencewascomplemented by a half-day PhD student workshop with poster presentations and a panel. We would liketo thank allmembers ofthe TechnicalProgramCommittee for theirtimelyandthoroughreviews.SpecialthankstoBalachanderKrishnamurthy and Konstantina Papagiannaki for handling all papers with PC-Chair con?ict. WewouldalsoliketothankSojinLeeforlayingoutplansforthebudget,lodging, and banquets and seeing them through, as well as Seoyeon Kang, who managed the website andwasalwaysthere to help outwith last-minute details.
