NPT/NPTF and BSPT are tapered threads while UN/UNF and BSPP are parallel. Four Easy Steps to Identify Hydraulic Threads | Parker ... Because connectors and

ports have many applications in fluid piping systems, you need to correctly identify them before adding or replacing them on a tube or hose, in your specific application. Manufacturers use identifiers such as ASME B1.1 and ISO 261, to classify the main thread characteristics: pitch, angle, diameter, and form. Hydraulic Fitting Thread Chart | Hydraulics Direct Threads are identified by their standard, diameter, and pitch. There are multiple thread standards; knowing what you're dealing with is an important part of the thread identification process. Sealant should always be used with tapered threads, except for NPTF, and never with parallel. Always use fully descriptive terms when calling out a thread. Hydraulic Fittings Part 1: Threads | LunchBox Sessions Use a thread pitch gauge to determine the number of threads per inch or the distance between threads in metric connections.
