The Knowledge Simon and Schuster
Dirt, soil, call it what you want—it's everywhere we go. It is the root of our existence, supporting our feet, our farms, our cities. This fascinating yet disquieting book finds, however, that we are running out of dirt, and it's no laughing matter. An

engaging natural and cultural history of soil that sweeps from ancient civilizations to modern times, *Dirt: The Erosion of Civilizations* explores the compelling idea that we are—and have long been—using up Earth's soil. Once bare of protective vegetation and exposed to wind and rain, cultivated soils erode bit by bit, slowly enough to be ignored in a single lifetime but fast enough over centuries to limit the lifespan of civilizations. A rich mix of history, archaeology and geology, *Dirt*

traces the role of soil use and abuse in the history of Mesopotamia, Ancient Greece, the Roman Empire, China, European colonialism, Central America, and the American push westward. We see how soil has shaped us and we have shaped soil—as society after society has risen, prospered, and plowed through a natural endowment of fertile dirt. David R. Montgomery sees in the recent rise of organic and no-till farming the hope for a new agricultural revolution that might help

us avoid the fate of previous civilizations. One Million A.D., The Story of Civilization 1,000,000 Years from NOW. Wipf and Stock Publishers (Dover thrift editions).

HOW THE IRISH SAVED CIVILIZATION

Pantheon

NATIONAL BESTSELLER • A book in the best tradition of popular history—the untold story of Ireland's role in maintaining Western culture while the Dark Ages settled on Europe. • The perfect St. Patrick's Day gift! Every year millions of Americans celebrate St. Patrick's Day, but they may not be aware of how great an influence St. Patrick was on the subsequent history of civilization. Not only did he bring Christianity to Ireland, he instilled a sense of literacy and learning that would create the conditions that allowed Ireland to become "the isle of saints and scholars"—and thus preserve Western culture while Europe was being overrun by barbarians. In this entertaining and compelling narrative, Thomas Cahill tells the story of how Europe evolved from the classical age of Rome to the medieval era. Without Ireland, the transition could

not have taken place. Not only did Irish monks and scribes maintain the very record of Western civilization -- copying manuscripts of Greek and Latin writers, both pagan and Christian, while libraries and learning on the continent were forever lost—they brought their uniquely Irish world-view to the task. As Cahill delightfully illustrates, so much of the liveliness we associate with medieval culture has its roots in Ireland. When the seeds of culture were replanted on the European continent, it was from Ireland that they were germinated. In the tradition of Barbara Tuchman's *A Distant Mirror*, *How The Irish Saved Civilization* reconstructs an era that few know about but which is central to understanding our past and our cultural heritage. But it conveys its knowledge with a winking wit that aptly captures the sensibility of the unsung Irish who relaunched civilization. *Civilization One: The World is Not as You Thought it Was* Princeton University Press Sorokin and *Civilization* is a festschrift to Pitirim Sorokin, one of the most famed figures of twentieth-century sociology and first president of the International Society for the Comparative Study of Civilizations

(ISCSC). He was a giant of the twentieth-century stage in the larger world as well. He debated with Trotsky, exchanged ideas with Pavlov, and received a personal invitation to meet with President Masaryk of Czechoslovakia. His principled dissent from sociological orthodoxy frequently anticipated that of Charles Wright Mills, Alfred McClung Lee, and Alexander Solzhenitsyn. He was, to paraphrase Joseph Ford, a scholar among statesmen and a statesman among scholars. The volume is divided into four parts: "A Life Remembered"; "Sorokin as Gadfly"; "Sorokin's Methodology"; and, "Applying Sorokin's Theories." Contributors and chapters to this volume include: "Sorokin's Life and Work" by Barry V. Johnston; "The Sorokin-Merton Correspondence on Puritanism, Pietism, and Science" by Robert K. Merton; "Sorokin and American Sociology: The Dynamics of a Moral Career in Science" by Lawrence T. Nichols; "Sorokin as Dialectician" by Robert C. Hanson; "Applying Sorokin's Typology" by Michel P. Richard; and "Transitions, Revolutions, and Wars" by William Eckhardt. Sorokin and *Civilization* will appeal to all those with an interest in

cultural and historical processes and the life and theories of Sorokin.

General History of Civilization in

Europe Kube Publishing Ltd

This book is the third volume of the series, "32.5 System". It advances the analysis of the contents of the two previously published books by establishing the link to the Megalithic System and the thesis presented by Christopher Knight and Alan Butler in their book, "Civilization One".

THE CENTENNIAL BOOK

Courier Dover Publications

The life and career of the legendary developer celebrated as the "godfather of computer gaming" and creator of Civilization, featuring his rules of good game design. "Sid Meier is a foundation of what gaming is for me today." — Phil Spencer, head of Xbox Over his four-decade career, Sid Meier has produced some of the world's most popular video games, including Sid Meier's Civilization, which has sold more than 51 million units worldwide and accumulated more than one billion hours of play. Sid Meier's Memoir! is the story of an obsessive young computer enthusiast who helped launch a

multibillion-dollar industry. Writing with warmth and ironic humor, Meier describes the genesis of his influential studio, MicroProse, founded in 1982 after a trip to a Las Vegas arcade, and recounts the development of landmark games, from vintage classics like Pirates! and Railroad Tycoon, to Civilization and beyond. Articulating his philosophy that a video game should be "a series of interesting decisions," Meier also shares his perspective on the history of the industry, the psychology of gamers, and fascinating insights into the creative process, including his rules of good game design.

Islamic Civilization Palala Press

*Includes pictures *Includes a bibliography for further reading When one thinks of the world's first cities, Sumer, Memphis, and Babylon are some of the first to come to mind, but if the focus then shifts to India, then Harappa and Mohenjo-daro will likely come up. These cities owe their existence to India's oldest civilization, known as the Indus Valley Civilization or the Harappan Civilization, which was contemporary with ancient Mesopotamia and ancient Egypt and had extensive contacts with the former, making it one of the most

important early civilizations in the world. Spread out along the rivers of the Indus River Valley, hundreds of settlements began forming around 3300 BCE, eventually coalescing into a society that had all of the hallmarks of a true civilization, including writing, well-developed cities, a complex social structure, and long-distance trade. Mohenjo-daro was the largest city of the Indus Valley Civilization, one of the most advanced civilizations to have ever existed, and the best-known and most ancient prehistoric urban site on the Indian subcontinent. It was a metropolis of great cultural, economic, and political importance that dates from the beginning of the 3rd millennium BCE. Although it primarily flourished between approximately 2500 and 1500 BCE, the city had longer lasting influences on the urbanization of the Indian subcontinent for centuries after its abandonment. It is believed to have been one of two capital cities of the Indus Civilization, its twin being Harappa located further north in Punjab, Pakistan. The fact that the ancient Indus Valley Civilization is also often referred to as the Harappan Civilization

demonstrates how important the discovery of Harappa is. As archaeologists and historians began to uncover more of the ancient Harappa site in the 19th and early 20th centuries, a more complete picture of the city emerged, namely its importance. Research has shown that Harappa was one of the three most important Indus Valley cities, if not the most important, with several mounds of settlements uncovered that indicate building activities took place there for over 1,000 years. At its height, Harappa was a booming city of up to 50,000 people who were divided into neighborhoods by walls and who went about their daily lives in well-built, orderly streets. Harappa also had drainage systems, markets, public baths, and other large structures that may have been used for public ceremonies. Ancient Harappa was truly a thriving and vibrant city that was on par with contemporary cities in Mesopotamia such as Ur and Memphis in Egypt. Among the many cities that formed in the region was a site known today as Kalibangan, which was unknown to the modern world until archaeologists began uncovering its secrets in excavations during the 1960s. They uncovered a city

that was not as large or important as the better-known sites of Mohenjo-daro and Harappa, but one that was still relatively large and the most important of all Indus cities along the now extinct Saraswati River. Excavations at Kalibangan have revealed that the city had two phases of settlement which corresponded with the two major phases of Indus Valley Civilization, and that it influenced the smaller settlements along the Saraswati River. Archaeological work at Kalibangan has also shown that although it followed some of the patterns of larger Indus cities such as Mohenjo-daro and Harappa, it was also a unique city in many ways. Kalibangan was located on a different river from the other major Indus Valley Civilization cities, and its river suffered a fate that led to the end of the city. The city of Kalibangan also presented modern archaeologists with a treasure trove of findings because it was one of the best preserved Harappan sites, giving scholars a chance to see not only how the people of Kalibangan lived, but possibly how the city died. The Ascent of Humanity Anchor

The first volume of the expansive Pulitzer Prize-winning series *The Story of Civilization*. Discover a history of civilization in Egypt and the Near East to the Death of Alexander, and in India, China, and Japan from the beginning; with an introduction on the nature and foundations of civilization.

Yahweh and the Code of Morals | Origins of Judaism | Ancient Hebrew Civilization | Social Studies 6th Grade | Children's Geography & Cultures Books Good Press

Mawdudi argues that the true understanding of Islamic civilization is possible only by having access to the soul of that civilization and its underlying fundamental principles – belief in God, the angels, the Prophets, the Revealed Books and the Last Day – rather than to its manifestations in knowledge, literature, fine arts, social life or its system of governance.

Dirt Univ of California Press

This book on social studies discusses the

history of Judaism as the first basis of monotheism. Using this book, your sixth grader will be able to analyze the significance of monotheism as well as the moral laws that govern humanity. And where did Judaism come from? From the Hebrew Bible, of course. Do these bits and pieces of information interest your child? Then get him/her a copy to know more!

A HISTORY OF CHINESE CIVILIZATION

Routledge

Civilization One: The World is Not as You Thought it Was Duncan Baird Publishers

The History of Civilization Feral House
Civilization and Beyond is a history book by Scott Nearing. Nearing was an American radical economist, educator and writer. Excerpt: "Thousands of years before the city of Rome was ringed with its six miles of stone wall, other peoples in Asia, Eastern Europe and Africa were building civilizations. New techniques of excavation, identification and preservation, subsidized by an increasingly affluent human society, and developed during the past two centuries of archeological research have provided the needed means and manpower. The result

is an imposing number of long buried building sites with their accompanying artifacts. Still more important are the records written in long forgotten languages on stone, clay tablets, metal, wood and paper. These remnants and records, left by extinguished civilizations, do not tell us all we wish to know, but they do provide the materials which enable us to reconstruct, at least in part, the lives of our civilized predecessors."

Streams of Civilization Duncan Baird Publishers

Sometimes groundbreaking literary pieces of the past have hidden jewels that must be revisited by forthcoming generations, as is the case with pastor, Ivy League scholar, and unconventional revolutionary William Henry Ferris' book, *The African Abroad*. Written almost a century ago, Ferris challenges societal norms in the fields of history, theology, philosophy as it pertains to Black people and those of African descent. Considered as one of the founding fathers of African studies, Ferris expounds on the history of familiar and not so familiar great Black men around the globe as well as the African ancestry of great historical figures such as Aesop,

Hannibal Barca, Russian author Alexander Pushkin, and even founding father Alexander Hamilton. In Volume One, Ferris explores theology, particularly the idea of God's personification as man himself; Black leadership, particularly regarding the strengths and shortcomings of W.E.B. Du Bois and Booker T. Washington; and Black identity in America. He concludes Volume One with a foray into African history and the African presence in ancient civilizations throughout the world.

Christian Missionary Civilization Tan Books

The author of *The More Beautiful World Our Hearts Know Is Possible* explores the history and potential future of civilization, tracing the converging crises of our age to the illusion of the separate self Our disconnection from one another and the natural world has mislaid the foundations of science, religion, money, technology, economics, medicine, and education as we know them. It has fired our near-pathological pursuit of technological Utopias even as we push ourselves and our planet to the brink of collapse. Fortunately, an Age of Reunion is emerging out of the birth pangs of an earth in crisis. Our journey of separation

hasn't been a terrible mistake but an evolutionary process and an adventure in self-discovery. Even in our darkest hour, Eisenstein sees the possibility of a more beautiful world—not through the extension of millennia-old methods of management and control but by fundamentally reimagining ourselves and our systems. We must shift away from our Babelian efforts to build ever-higher towers to heaven and instead turn out attention to creating a new kind of civilization—one designed for beauty rather than height.

The Ancient Indus Valley Civilization's Biggest Cities Harry N. Abrams

...one of the biggest breakthroughs of all times... this is the definitive proof that civilisation is thousands of years older than historians believe' -Colin Wilson 'A breakthrough book. The last four thousand years are never going to be the same again' - Graham Hancock This is the amazing story of how a quest to try to crack the mystery of the Megalithic Yard - an ancient unit of linear measurement - led to the discovery of compelling evidence pointing to the existence of an unknown, highly advanced culture which was the precursor to the earliest known

civilizations such as the Sumerians and the Egyptians. There must have been a Civilization One. Knight and Butler reveal the secrets of an extraordinary integrated measuring system which might have been lost to the world for ever. It was a system, far more advanced than anything used today, which forms the basis of both the Imperial and Metric measure systems! These ancient scientists understood the dimensions, motions and relationships of the Earth, Moon and Sun - they measured the solar system and even understood how the speed of light was integrated into the movements of our planet. Their conclusions fly in the face of everything that we thought we knew about the origins of the modern world - but the evidence is incontrovertible. And the implications of these revelations go far beyond the fascination of the discovery of a 'super-science' of prehistory; they indicate a grand plan which will have far reaching theological ramifications!

The Civilization of Christianity

University Press of Kentucky

The devastating thesis of this book is that there is a deadly and irreconcilable opposition between western civilization

and Christianity, and that one of them must destroy the other. Throughout his more than forty years of teaching and writing, says John L. McKenzie, he felt a vague but strong discomfort -- a malaise. He finally realized that it was a deliberately unrecognized discord between what I was and the word of God which I had so long studied. My way of life and my world demanded the maintenance of a number of assumptions which the world of God compelled me to question. My way of life and my world did not permit me to ask those questions. When the questions grew to an intolerable number, this book was the only way to find comfort, the comfort which I hope is reached by at last achieving total candor. And candid John McKenzie is in this piercing analysis of the confrontation between Christianity and a world which has twisted it, softened it, rationalized it, and evaded its basic precepts.

Penguin

The term "civilization" comes with considerable baggage, dichotomizing people, cultures, and histories as "civilized"—or not. While the idea of civilization has been deployed throughout

history to justify all manner of interventions and sociopolitical engineering, few scholars have stopped to consider what the concept actually means. Here, Brett Bowden examines how the idea of civilization has informed our thinking about international relations over the course of ten centuries. From the Crusades to the colonial era to the global war on terror, this sweeping volume exposes “civilization” as a stage-managed account of history that legitimizes imperialism, uniformity, and conformity to Western standards, culminating in a liberal-democratic global order. Along the way, Bowden explores the variety of confrontations and conquests—as well as those peoples and places excluded or swept aside—undertaken in the name of civilization. Concluding that the “West and the rest” have more commonalities than differences, this provocative and engaging book ultimately points the way toward an authentic intercivilizational dialogue that emphasizes cooperation over clashes. [The African Abroad Volume 1](#) Penguin
This world history text provides a

comprehensive overview of ancient history from Creation through the 1620s, from a Christian perspective. Extensive vocabulary questions and suggested projects are listed throughout the text. The text is beautifully illustrated and contains numerous high-quality maps in two-color. Grade 9.

Against Civilization TAN Books

A bold reassessment of what caused the Late Bronze Age collapse In 1177 B.C., marauding groups known only as the "Sea Peoples" invaded Egypt. The pharaoh's army and navy managed to defeat them, but the victory so weakened Egypt that it soon slid into decline, as did most of the surrounding civilizations. After centuries of brilliance, the civilized world of the Bronze Age came to an abrupt and cataclysmic end. Kingdoms fell like dominoes over the course of just a few decades. No more Minoans or Mycenaeans. No more Trojans, Hittites, or Babylonians. The thriving economy and cultures of the late second millennium B.C., which had stretched from Greece to Egypt and Mesopotamia,

suddenly ceased to exist, along with writing systems, technology, and monumental architecture. But the Sea Peoples alone could not have caused such widespread breakdown. How did it happen? In this major new account of the causes of this "First Dark Ages," Eric Cline tells the gripping story of how the end was brought about by multiple interconnected failures, ranging from invasion and revolt to earthquakes, drought, and the cutting of international trade routes. Bringing to life the vibrant multicultural world of these great civilizations, he draws a sweeping panorama of the empires and globalized peoples of the Late Bronze Age and shows that it was their very interdependence that hastened their dramatic collapse and ushered in a dark age that lasted centuries. A compelling combination of narrative and the latest scholarship, 1177 B.C. sheds new light on the complex ties that gave rise to, and ultimately destroyed, the flourishing civilizations of the Late Bronze Age—and that set the stage for the emergence of classical Greece.
