Frederick Jackson Turner's 1893 essay on the history of the United States remains one of the most famous and influential works in the American canon. That is a testament to Turner's powers of creative synthesis; in a few short pages, he succeeded in redefining the way in which whole generations of Americans understood the manner in which their country was shaped, and their own character moulded, by the frontier experience. It is largely thanks to Turner's influence that the idea of America as the home of a sturdily independent people – one prepared, ultimately, to obtain justice for themselves if they could not find it elsewhere – was born. The impact of these ideas can still be felt today: in many Americans' suspicion of "big government," in their attachment to guns – even in Star Trek's vision of space as "the final frontier." Turner's thesis may now be criticised as limited (in its exclusion of women) and over-stated (in its focus on the western frontier). That it redefined an issue in a highly impactful way – and that it did so exceptionally eloquently – cannot be doubted.

This book, now in its Third Edition, is

revised as per the feedback received from our valuable students and readers. It is exclusively prepared for the students who wish to appear for campus recruitment screening test and graduate/post graduate students appearing for various competitive examinations in Quantitative Aptitude and Reasoning. The main objective of this volume is to guide the students to solve the problems within the stipulated time and that too with the higher degree of accuracy. Organized in two parts—Quantitative Aptitude (Part I) and Reasoning (Part II)—it helps students to apply basic mathematical and reasoning concepts to a range of quantitative and reasoning problems. The separate sections are devoted to verbal and nonverbal reasoning. It sharpens the ability to apply analytical and logical thinking while gathering and analysing information, designing and testing solutions to problems, and formulating plans. This book is a valuable resource for conducting training programmes/workshops to train students in problem solving techniques in Mathematical Aptitude. It would equally be useful to the candidates appearing for quantitative aptitude and reasoning test conducted in various competitive examinations of graduate level. NEW TO THIS EDITION • Numerous Reasoning questions (with explanatory answers) asked in recent placement tests and competitive exams • New topics on • Four figure series • Choosing one element of a similarly related pair • Choosing set of similarly related figures • Detecting one element of each of the two related pair • Detecting the relationship and choosing the correct substitute • Choosing the odd figure • Choosing a similar figure • Rule 4 [(i) and (ii)] in Rule detection

Few historical problems are more baffling in retrospect than the conundrum of how Hitler was able to rise to power in Germany and then command the German people – many of whom had only marginal interest in or affiliation to Nazism – and the Nazi state. It took Ian Kershaw – author of the standard two-volume biography of Hitler – to provide a truly convincing solution to this problem. Kershaw's model blends theory – notably Max Weber's concept of 'charismatic leadership' – with new archival research into the development of the Hitler 'cult' from its origins in the 1920s to its

collapse in the face of the harsh realities of the latter stages of World War II. Kershaw's model also looks at dictatorship from an unusual angle: not from the top down, but from the bottom up, seeking to understand what ordinary Germans thought about their leader. Kershaw's broad approach is a problem-solving one. Most obviously, he actively interrogates his evidence, asking highly productive questions that lead him to fresh understandings and help generate solutions that are credibly rooted in the archives. Kershaw's theories also have application elsewhere; the model set out in *The 'Hitler Myth'* has been used to analyse other charismatic leaders, including several from ideologically-opposed backgrounds.

The 1979 publication of Susan Gubar and Sandra M. Gilbert's ground-breaking study *The Madwoman in the Attic* marked a founding moment in feminist literary history as much as feminist literary theory. In their extensive study of nineteenth-century women's writing, Gubar and Gilbert offer radical re-readings of Jane Austen, the Brontës, Emily Dickinson, George Eliot and Mary Shelley tracing a distinctive female literary tradition and female literary aesthetic. Gubar and Gilbert raise questions about canonisation that continue to resonate today, and model the revolutionary importance of re-reading influential texts that may seem all too familiar

A critical analysis of Argyris's *Integrating The Individual and the Organization*, which forms part of a series of essays and books considering how organisations should be run. The essay explores the lack of congruence between the needs and expectations of individual employees and the organisations that employ them. The impact of the work depends heavily on reasoning skills. Chris Argyris used strong, well-structured arguments to make his point. His reasoning has strong implications for solving a problem that many organizations experience: disengaged and disloyal employees. Grounding his argument in studies on human nature, Argyris highlighted that demands of greater independence, an expansion of interests, and re-orientation of goals

usually accompany maturation, which is at odds with higher control stemming from formal organisations. This frustration, he contends, is detrimental to productivity, increases the chance of failure and causes conflict.

The emphasis on organizational change in the corporate life of recent years-including job redesign, autonomous groups, high performance work systems, and the redesign of control systems-owes a great deal to the pioneering work of Chris Argyris. This book examines how

individuals in organizations can become more effective, in turn making organizations more effective. It explores the conventional pyramidal structure of organizations, in which there is top-down control by managers over workers, and examines their negative consequences. These include organizational injustice and eventually irrational decision-making. Argyris also discusses the characteristic learning system of the modern organization, which he describes as "single-loop" in character. This system, he argues, is only adequate enough to permit the organization to implement existing policies. It does not permit the more difficult and comprehensive task of questioning underlying goals and assumptions, which he terms "doubt loop" learning. In this kind of learning, the organization is able to confront the more difficult problems that affect organizations in a time of transition. In his new introduction, Argyris reviews the strengths and limitations of the argument advanced in "Integrating the Individual and the Organization." He describes why the pyramidal structure endures, and why creating a self-learning organization is an even more challenging task than he has imagined. The book will be of interest to professionals with a long-standing interest in organizational development as well as those just entering the field, managers confronting the challenge of organization change, and researchers in organizational behavior and theory.

Peter Seibel interviews 15 of the most interesting computer programmers alive today in *Coders at Work*, offering a companion volume to Apress's highly acclaimed best-seller *Founders at Work*

by Jessica Livingston. As the words “at work” suggest, Peter Seibel focuses on how his interviewees tackle the day-to-day work of programming, while revealing much more, like how they became great programmers, how they recognize programming talent in others, and what kinds of problems they find most interesting. Hundreds of people have suggested names of programmers to interview on the Coders at Work web site: www.codersatwork.com. The complete list was 284 names. Having digested everyone’s feedback, we selected 15 folks who’ve been kind enough to agree to be interviewed:

Clifford Geertz has been called 'the most original anthropologist of his generation' - and this reputation rests largely on the huge contributions to the methodology and approaches of anthropological interpretation that he outlined in *The Interpretation of Cultures*. The centrality of interpretative skills to anthropology is uncontested: in a subject that is all about understanding mankind, and which seeks to outline the differences and the common ground that exists between cultures, interpretation is the crucial skillset. For Geertz, however, standard interpretative approaches did not go deep enough, and his life's work concentrated on deepening and perfecting his subject's interpretative skills. Geertz is best known for his definition of 'culture,' and his theory of 'thick description,' an influential technique that depends on fresh interpretative approaches. For Geertz, 'cultures' are 'webs of meaning' in which everyone is suspended. Understanding culture, therefore, is not so much a matter of going in search of law, but of

setting out an interpretative framework for meaning that focuses directly on attempts to define the real meaning of things within a given culture. The best way to do this, for Geertz, is via 'thick description:' a way of recording things that explores context and surroundings, and articulates meaning within the web of culture. Ambitious and bold, Geertz's greatest creation is a method all critical thinkers can learn from.
