The production of higher grade phosphoric acid using fertilizer grade acid is one of Prayon's specialities. The dearsenification and defluorination of the acid for manufacturing products to be used in animal feeds (such as MCP, DCP) can be achieved by sulfurising and steam-stripping fertilizer acid. These techniques form part of the portfolio of Prayon processes for transforming fertilizer grade acid into products with the highest level of added value.

The rise and rationalization of the industrial phosphates industry have gone hand in hand with the development and maturation of technologies to purify phosphoric acid. In the 1960s and 70s, driven by the exponential sales growth of the detergent-builder sodium tripolyphosphate, chemical producers raced to develop processes that would provide a suf
