Resumes and Cover Letters that Have Worked for Military Professionals John Williams

The major objective of this book was to identify issues related to the introduction of new materials and the effects that advanced materials will have on the durability and technical risk of future civil aircraft throughout their service life. The committee investigated the new materials and structural concepts that are likely to be incorporated into next generation commercial aircraft and the factors influencing application decisions. Based on these predictions, the committee attempted to identify the design, characterization, monitoring, and maintenance issues that are critical for the introduction of advanced materials and structural concepts into future aircraft.

Human error is implicated in nearly all aviation accidents, yet most investigation and prevention programs are not designed around any theoretical framework of human error. Appropriate for all levels of expertise, the book provides the knowledge and tools required to conduct a human error analysis of accidents, regardless of operational setting (i.e. military, commercial, or general aviation). The book contains a complete description of the Human Factors Analysis and Classification System (HFACS), which incorporates James Reason's model of latent and active failures as a foundation. Widely disseminated among military and civilian organizations, HFACS encompasses all aspects of human error, including the conditions of operators and elements of supervisory and organizational failure. It attracts a very broad readership. Specifically, the book serves as the main textbook for a course in aviation accident investigation taught by one of the authors at the University of Illinois. This book will also be used in courses designed for military safety officers and flight surgeons in the U.S. Navy, Army and the Canadian Defense Force, who currently utilize the HFACS system during aviation accident investigations. Additionally, the book has been incorporated into the popular workshop on accident analysis and prevention provided by the authors at several professional conferences world-wide. The book is also targeted for students attending Embry-Riddle Aeronautical University which has satellite campuses throughout the world and offers a course in human factors accident investigation for many of its majors. In addition, the book will be incorporated into courses offered by Transportation Safety International and the Southern California Safety Institute. Finally, this book serves as an excellent reference guide for many safety professionals and investigators already in the field.

Hearings ... 84th Congress, 2d Session PREP Publishing

A revised edition of the ultimate resume and letter writing guide for transitioning military personnel! Here's the book that provides important answers to many questions facing job seekers with military experience. This book shows how to write, produce, distribute, follow up, and evaluate resumes and letters with maximum impact. Identifying what employers really look for on resumes and letters, it shows how to craft dynamite employer-centered communications as well as: identifies 28 major myths and mistakes; outlines a 7-step job search process; reveals 65 key writing, production, distribution, and follow-up principles; specifies a 6-step military-to-civilian language translation process; includes examples of over 60 resumes and 14 letters; and lists nearly 40 top Internet

employment sites you should use. Rich with examples and sound career planning advice, the book also includes several unique self-evaluation instruments and resume data forms for strengthening job search communication.

When I entered the aviation industry many years ago. No one sat me down and explained what I was getting myself into from a real world perspective. There was one person I knew was in the industry and he worked nights and was very difficult to connect with. In short, I was clueless. I made grave mistakes and sometimes took real, once-in-a-lifetime opportunities, for granted. I also missed some opportunities because I was not prepared. After you graduate aviation school, you are going to want to have a full picture of your future. If you are currently in the industry and have been for about 5 years, you will still need this information to successfully fine-tune your career. This book will help prepare you for a successful aviation maintenance career. It gives a good "insider's" perspective of the aviation maintenance industry that most would have to work in the industry to get. It sums up what "good" mechanics should know about their profession. It will help you avoid the mistakes that I made thereby improve your chances of success.Do you want to know more about contracting? Do you know what contracting is? What are the benefits and disadvantages versus working with a major carrier? Having information that you can apply is the best tool you can have when it comes to your career.I am an FAA Licensed Aircraft Mechanic of 25 years and have held positions such as: Aircraft Mechanic, Aircraft Maintenance Supervisor, Site Lead, Install Manager, Regional Manager, Maintenance Representative, Flight Engineer, Process Improvement Manager, and Aircraft Inspector, Through my career experiences, I feel I have very important information to share with the many professionals in the aviation maintenance industry.For example: in our industry, there are occupational basics and personal basics. Do you know what they are and if so, do you meet them all on a daily basis? Making sure that you do will improve your chances for better opportunities and promotion, at the very least will separate you from the pack. Is aviation management one of your goals? It could be somewhat difficult to break into but also very lucrative. I share key information that will guide you into that direction.Do you set professional and personal goals for yourself? If so, do you update them on a yearly basis? Are you measuring your progress? People who grow and achieve in their careers are intentional. There are tools in the book that I share that will help you. Do you interview well? You will after reading some of the tips that I share after having failed miserably.Finally, I have included a reading list that will elevate the way you approach your job. Your personal and career success has 80% to do with your attitude and the thoughts that you think. This list is a valuable resource. Most of these titles also come in an audio format so you can listen as you drive to and from work. "Take Charge of Your Aviation Career" is a great tool to add for your career.
