Process Coal gasification process is simulated in the reactor shown  
in Fig. 5. It is a one-stage atmospheric oxygen-blown entrained  
flow reactor with a non-swirling flow at Brigham Young University.  
It is 1.8 m long with a diameter of 20 cm. Coal is injected in the  
primary stream with a gas that consists of O<sub>2</sub>, Ar and H<sub>2</sub>O. Entrained flow coal gasification process simulation with ... as  
posed by the direct burning of coal [5]. In this study, Simulation of  
Coal Gasification process is performed using steam as the  
gasification medium rather than its mixture with pure oxygen as  
in current industrial practices. The purpose is to determine the  
performance of indirect gasification in order to make the process  
more economically and feasible by eliminating the costs of pure  
oxygen production. Aspen Plus® Simulation of a Coal Gasification  
Process ... Abstract. A coal gasification mathematical model that  
can predict temperature, converted fraction and particle size  
distribution for solids have been developed for a high pressure  
fluidized bed. For gases in both emulsion and bubble phase, it can  
predict temperature profiles, gas composition, velocities and  
other fluid-dynamic parameters. Modelling and simulation of a coal  
gasification process in ... Chemical looping gasification (CLG) of  
Ningdong coal by using Fe<sub>2</sub>O<sub>3</sub> as the oxygen carriers (OCs) was

studied, and the gasification characteristics were obtained. A  
computation fluid dynamics (CFD) model based on Eulerian-  
Lagrangian multiphase framework was established, and a  
numerical simulation the coal chemical looping gasification  
processes in fuel reactor (FR) was investigated. Simulation study  
on the gasification process of Ningdong ... There are two ways for  
the simulation of coal gasification in a fluidized bed to occur, i.e.,  
the equilibrium method and the kinetic method. The equilibrium  
models mainly use the RYield and RGibbs modules to describe the  
pyrolysis and gasification process, while Catalytic Coal Gasification  
Process Simulation with ... This paper deals with the modeling and  
simulation of air-steam gasification of coal using Aspen Plus  
process simulator. The model is able to predict the gas products,  
tar concentration, and char yield where the prediction accuracy of  
the presented model has been validated against the experimental  
measurements and found to be in a good agreement. The effect  
of coal particle size and minimum fluidization velocity (U<sub>min</sub>) in  
air-steam gasification is explored through key operating  
... Computer simulation of coal gasification in a full scale ... Bi et al.  
established a three-dimensional CFD model to simulate the coal  
gasification process in the GSP gasifier with different swirl  
numbers, and a satisfactory agreement was observed between  
the predicted main components and designed data. Numerical  
simulation of the gasification-reduction ... A three-dimensional  
simulation of the Underground coal gasification (UCG) process is  
studied in terms of the heat and mass transport phenomena and  
chemical kinetics in a coal seam during coal combustion by  
applying the controlled retracting injection point technique. The  
STARS module of the Computer Modelling Group software is used  
in this study. The gas species flow rate, cavity shapes, and

temperature profile in the coal seam during gasification are investigated. Numerical simulation of underground coal gasification ... This model is developed to study UCG in deep coal seams and can be used for production prediction and optimization of the process. The simulation results, such as cavity formation, temperature profile, and gas composition at the producer, are presented. Finally, the results are analyzed on the basis of field pilot tests. Simulation Study of Underground Coal Gasification in ... But  $C(s)-H_2O$  and  $C(s)-CO_2$  reactions are also important in the coal gasification process, especially after the exhaustion of  $O_2$ . It can be seen from Fig. 9, Fig. 8, at the gas inlet, the  $O_2$  is supplied into the gasifier and  $C(s)-O_2$  is preponderating. Three-dimensional simulation of fluidized bed coal ... **ABSTRACT** Numerical simulation of the oxygen-blown coal gasification process inside a cross-type two-stage (E-Gas like) gasifier is studied with the commercial CFD solver ANSYS FLUENT. The purpose of this study is to use CFD simulation to improve understanding of the gasification processes in the E-Gas like gasifier. NUMERICAL SIMULATION OF GASIFICATION PROCESS IN A CROSS ... A model of entrained-flow coal gasifier (1920 t/d and single nozzle) was established to simulate the gasification process of pulverized coal from Ningxia of China on the basis of ANSYS Fluent. In order to simulate the characteristics of the coal gasification process, the Lagrange model was adopted to obtain properties of particles, and the standard  $k-\epsilon$  turbulence model was applied to the gas phase flow. Study on simulation of pulverized coal gasification ... This thesis work describes the simulation of a part of the coal gasification process, namely the water gas shift reaction or the quenching process. The quenching process involves simulation of a multicomponent, multiphase reactive flow system. This thesis uses the Eulerian-Lagrangian approach to simulate the quenching process. Numerical simulation of Quenching Process in Coal Gasification During the simulation process, the gasification temperature was varied in the range of 750–1050 °C keeping the coal feed rate and the air to coal ratio constant at 15 kg/hr and 1.5 respectively so that the data obtained can be compared with the literature where the data is available for Gasifier bed temperature at 950 °C only . The temperature range studies from 750 to 1050 °C will provide more comprehensive data related to knowing and optimizing the process parameters further. Gasification studies of high ash Indian

coals using Aspen ... **Keywords:** Chemical process modelling; Aspen Plus simulation; Underground Coal Gasification (UCG); Syngas; Coal 1. Introduction Coal is one of the most commonly used fossil fuels which currently meets approximately 40% of the global electricity demand, while also covering one quarter of the global energy needs. However, these figures barely reflect Chemical Process Modelling of Underground Coal ... The devolatilization process and the moisture content in coal and biomass play an important role on the gasification performance of these fuels. To theoretically understand the complex chemical processes in a gasifier, we developed a multiphysics model to simulate the gasification processes in a well-stirred reactor. Mathematical Modeling of Coal Gasification Processes in a ... The simulation of the coal gasification process in a bubbling fluidized bed reactor was performed in order to estimate the performance of the gasifier and assess the optimal operating conditions. A Eulerian-Eulerian computational fluid dynamics (CFD) simulation has been developed to predict the hydrodynamic behaviour of the fluidization regime in the bed. An extensive simulation of coal gasification in bubbling ... Dynamic simulation at NETL's AVESTAR Center is one of the highly specialized and increasingly sophisticated computational tools that will be used by the Gasification Team to help achieve operation and control objectives for gasification and carbon dioxide ( $CO_2$ ) capture technologies. 5.3.5 Gasifier Simulator (AVESTAR) | netl.doe.gov Coal gasification, any process of converting coal into gas for use in illuminating and heating. The first illuminating gas was manufactured from coal in England in the late 18th century by the process of carbonization or destructive distillation, heating coal in the absence of air, leaving a residue of coke as a by-product. Dynamic simulation at NETL's AVESTAR Center is one of the highly specialized and increasingly sophisticated computational tools that will be used by the Gasification Team to help achieve operation and control objectives for gasification and carbon dioxide ( $CO_2$ ) capture technologies. Modelling and simulation of a coal gasification process in ... **Keywords:** Chemical process modelling; Aspen Plus simulation; Underground Coal Gasification (UCG); Syngas; Coal 1. Introduction Coal is one of the most commonly used fossil fuels which currently meets approximately 40% of the global electricity

demand, while also covering one quarter of the global energy needs. However, these figures barely reflect Simulation Study of Underground Coal Gasification in ... Chemical looping gasification (CLG) of Ningdong coal by using  $Fe_2O_3$  as the oxygen carriers (OCs) was studied, and the gasification characteristics were obtained. A computation fluid dynamics (CFD) model based on Eulerian-Lagrangian multiphase framework was established, and a numerical simulation the coal chemical looping gasification processes in fuel reactor (FR) was investigated.
