This open access Brief
introduces the basic
principles of control
theory in a concise self-
study guide. It

complements the classic
texts by emphasizing the
simple conceptual unity of
the subject. A novice can
quickly see how and why
the different parts fit

together. The concepts build slowly and naturally one after another, until the reader soon has a view of the whole. Each concept is illustrated by detailed examples and graphics. The full software code for each example is available, providing the basis for experimenting with various assumptions, learning how to write programs for control analysis, and setting the stage for future research projects. The topics focus on robustness, design trade-offs, and optimality. Most of the book develops classical linear theory. The last part of the book considers robustness with respect to nonlinearity and explicitly nonlinear extensions, as well as advanced topics such as adaptive control and model predictive control. New students, as well as scientists from other backgrounds who want a concise and easy-to-grasp coverage of control theory, will benefit from the emphasis on concepts and broad understanding of the various approaches. "This book addresses the psychosocial causes, consequences, and underpinnings of intra-regional migration in Latin America. War, political instability, and disparities in wealth and opportunity have long driven migration within Latin America, and this process shows no sign of slowing. In this book, cross-cultural and social psychologists address the urgent issues that face migrants throughout Central and South America. This includes overt prejudice and discrimination, particularly toward immigrants of indigenous or African-American origin; micro-aggressions; the tendency to positively value fair skin and European surnames; as well as political questions regarding the nature of

citizenship and nationhood and links between legacies of colonialism and slavery and present-day inequality. Contributors offer conceptual, theoretical, and methodological tools for understanding the psychological processes that underlie migration and intergroup contact. Chapters focus on migration between and within countries in Central and South America, including Chile, Argentina, Bolivia, Costa Rica, Mexico, Peru, and Brazil"--
