NEW YORK TIMES BESTSELLER • "A fascinating look at how

consumers perceive logos, ads, commercials, brands, and

products."—Time How much do we know about why we buy?

What truly influences our decisions in today's message-cluttered

world? In *Buyology*, Martin Lindstrom presents the astonishing

findings from his groundbreaking three-year, seven-million-dollar

neuromarketing study—a cutting-edge experiment that peered

inside the brains of 2,000 volunteers from all around the world as

they encountered various ads, logos, commercials, brands, and

products. His startling results shatter much of what we have long

believed about what captures our interest—and drives us to buy.

Among the questions he explores: • Does sex actually sell? •

Does subliminal advertising still surround us? • Can "cool" brands

trigger our mating instincts? • Can our other senses—smell,

touch, and sound—be aroused when we see a product? *Buyology*

is a fascinating and shocking journey into the mind of today's

consumer that will captivate anyone who's been seduced—or

turned off—by marketers' relentless attempts to win our loyalty,

our money, and our minds.

Industrial products that are made from, or contain, nitrogen are

described in parts of some encyclopedias and standard reference

works. However it is not always simple to determine from these

varied sources the present status of the technology and markets

for various nitrogen products. We therefore perceived a need for

a text that provides a comprehensive description of: 1) products

that are made from or that contain nitrogen; 2) the processes

that produce these products; and 3) the markets that consume

these products. I have attempted to present the material in a

standardized format that should make this book easy to use and

helpful to the readers. The standard format for each product is:

Introduction, Process, Production, and Uses, with some variations

in different chapters. This book provides information that could

be used by a wide range of readers: Fertilizer companies—to

evaluate different production processes and review general

trends in the market. Basic chemical companies—to evaluate

different production processes and review general trends in the

market. Specialty chemical companies—to investigate new

chemical production and/or sales opportunities and the processes that could make those sales a possibility. Chemical distributors—to obtain a feel for the general market size for some chemicals and the basic handling and distribution procedures for various chemicals. Engineering Companies—to evaluate different production processes and review general trends in the market. Engineering and Chemistry Students—to learn more about practical applications of the principals that they have experienced in their classrooms and laboratories.

This lecture attempts to tell stories through music and about music, and about the music of several cultures and times, about its effect on human experience, about the instruments and their makers in order to try and connect the present time with some of music's own roots, a cause for much reflection on the part of the lecturer.

Porting heads is an art and science. It takes a craftsman's touch to shape the surfaces of the head for the optimal flow characteristics and the best performance. Porting demands the right tools, skills, and application of knowledge. Few other engine builders have the same level of knowledge and skill porting engine heads as David Vizard. All the aspects of porting stock as well as aftermarket heads in aluminum and cast-iron constructions are covered. Vizard goes into great depth and detail on porting aftermarket heads. Starting with the basic techniques up to more advanced techniques, you are shown how to port iron and aluminum heads as well as benefits of hand and CNC porting. You are also shown how to build a high-quality flow bench at home so you can test your work and obtain professional results. Vizard shows how to optimize flow paths through the heads, past the valves, and into the combustion chamber. The book covers blending the bowls, a basic porting procedure, and also covers pocket porting, porting the intake runners, and many advanced procedures. These advanced procedures include unshrouding valves, porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power.

LEARNING WITH INFORMATION SYSTEMS

Rex Bookstore, Inc.

This book summarizes science and technology of a new generation of high-energy and insensitive explosives. The objective is to provide professionals with comprehensive information on the synthesis and the physicochemical and detonation properties of the explosives. Potential technologies applicable for treatment of contaminated wastestreams from manufacturing facilities and environmental

matrices are also be included. This book provides the reader an insight into the depth and breadth of theoretical and empirical models and experimental techniques currently being developed in the field of energetic materials. It presents the latest research by DoD engineers and scientists, and some of DoD's academic and industrial researcher partners. The topics explored and the simulations developed or modified for the purposes of energetics may find application in other closely related fields, such as the pharmaceutical industry. One of the key features of the book is the treatment of wastewaters generated during manufacturing of these energetic materials.

In *Learning with Information Systems* the author takes the developing world as the context and through a series of case studies develops a commonly used systems analysis methodology. He demonstrates how this methodology can evolve and adapt as new ideas become prominent. Issues of sustainability of information systems, participation in systems design and user ownership of systems are all examined. This book does not attempt to be prescriptive for all contexts nor does it focus on any particular technology. It addresses the essential questions and promises practical approaches which will help in the avoidance of the worst forms of disaster associated with the planning of information systems for developing countries.

With the changing landscape of the transport sector, there are also alternative powertrain systems on offer that can run independently of or in conjunction with the internal combustion (IC) engine. This shift has actually helped the industry gain traction with the IC Engine market projected to grow at 4.67% CAGR during the forecast period 2019-2025. It continues to meet both requirements and challenges through continual technology advancement and innovation from the latest research. With this in mind, the contributions in *Internal Combustion Engines and Powertrain Systems for Future Transport 2019* not only cover the particular issues for the IC engine market but also reflect the impact of alternative powertrains on the propulsion industry. The main topics include: • Engines for hybrid powertrains and electrification • IC engines • Fuel cells • E-machines • Air-path and other technologies achieving performance and fuel economy benefits • Advances and improvements in combustion and ignition systems • Emissions regulation and their control by engine and after-treatment • Developments in real-world driving cycles • Advanced boosting systems • Connected powertrains (AI) • Electrification opportunities • Energy conversion and recovery systems • Modified or novel engine cycles • IC engines for heavy duty and off highway Internal Combustion Engines and Powertrain Systems for Future Transport 2019 provides a forum for IC engine, fuels and powertrain experts, and looks closely at developments in powertrain technology required to meet the demands of the low carbon economy and global competition in all sectors of the transportation, off-highway and stationary power

industries.

A SECRET SORROW

Introduction to Internal Combustion Engines

This work serves as a reference concerning the automotive chassis, i.e. everything that is inside a vehicle except the engine and the body. It is the result of a decade of work mostly done by the FIAT group, who supplied material, together with other automotive companies, and sponsored the work. The first volume deals with the design of automotive components and the second volume treats the various aspects of the design of a vehicle as a system.

This book analyses Rabindranath Tagore's contribution to Bengali drama and theatre. Throughout this book, Abhijit Sen locates and studies Rabindranath's experiments with drama/theatre in the context of the theatre available in nineteenth-century Bengal, and explores the innovative strategies he adopted to promote his 'brand' of theatre. This approach finds validation in the fact that Rabindranath combined in himself the roles of author-actor-producer, who always felt that, without performance, his

dramatic compositions fell short of the desired completeness.

Various facets of his plays as theatre and his own role as a theatre-practitioner are the prime focus of this book. This book will be of great interest to students and scholars in Theatre and Performance Studies and most notably, those focusing on Indian Theatre and Postcolonial Theatre.
