Computer algebra systems allow students to work on mathematical models more efficiently than in the case of pencil and paper. The use of such systems also leads to fewer errors and enables students to work on complex and computationally intensive models. Aimed at undergraduates in their second or third year, this book is filled with examples from a wide variety of disciplines, including biology, economics, medicine, engineering, game theory, physics, and chemistry. The text includes a large number of Maple(R) recipes.

The first International Conference on Intelligent Tutoring Systems (ITS) was held ten years ago in Montreal (ITS '88). It was so well received by the international community that the organizers decided to do it again in Montreal four years later, in 1992, and then again in 1996. ITS '98 differs from the previous ones in that this is the first time the conference has been held outside of Montreal, and it's only been two years (not four) since the last one. One interesting aspect of the ITS conferences is that they are not explicitly bound to some organization (e.g., IEEE or AACE). Rather, the founder of these conferences, Claude Frasson, started them as a means to congregate researchers actively involved in the ITS field and provide a forum for presentation and debate of the most currently challenging issues. Thus the unifying theme is science. This year's "hot topics" differ from those in the earlier ITS conferences as they reflect ever changing trends in ITS research. A few of the issues being examined at ITS '98 include: Web based tutoring systems, deploying ITS in the real world, tutoring and authoring tools, architectures, and knowledge structure and representation.

The NATO workshop "Knowledge acquisition in the domain of physics and intelligent learning environments" was held in Lyon, France, July 8-12, 1990. A total of 31 researchers from Europe (France, Germany, Greece, Italy, Portugal, and the U. K.), the U. S. A. , and Japan worked together.

This proceedings volume contains most of the contributions to the workshop. The papers show clearly the main directions of research in intelligent learning environments. They display a variety of points of view depending on the researcher's own background even when a single domain of teaching, namely physics, is considered. We acknowledge the assistance of Michael Baker, who was responsible for reviewing the English of the contributions. February 1992 Andree Tilberghien Heinz Mandl Table of Contents Introduction 1 1. Strategies and Tactics of Behavioral Research and Practice focuses on the most effective methods for measuring and evaluating changes in behavior. The authors provide the rationale for different procedures for measuring behavior and designing within-subject comparisons between control and intervention conditions. The text explains the strengths and weaknesses of methodological alternatives for every topic so that behavioral researchers and practitioners can make the best decisions in each situation. This classic text has been extensively revised to be more accessible and practical. Not only does it feature much more discussion of how research methods are relevant to today's practitioners, it also includes additional examples based on field research and service delivery scenarios. With expanded coverage on creating experimental designs, as well as new chapters on behavioral assessment, the statistical analysis of data, and ethical issues associated with research methods, this book provides a strong foundation for direct behavioral measurement, within-subject research design, and interpretation of behavioral interventions. Enriched with more pedagogical features, including key terms, tables summarizing important points, figures to help readers visualize text, and updated examples and suggested readings, this book is an invaluable resource for students taking courses in research methods. This book is appropriate for researchers and practitioners in behavior analysis, psychology, education, social work, and other social and

health science programs that address questions about behavior in research or practice settings.

This text is designed to assist preservice and inservice teachers in creating a critical and reflective dialogue with themselves, their assigned classroom cultures, and the larger school environment. It engages readers in a series of classroom and school-based activities, observations, and exercises that can be used in any teacher education course with a field component. Different from other field experience guides, this text aims to disrupt traditional conceptions of teacher education and field experiences--by emphasizing the problematic nature and dynamics of public schooling, and encouraging readers to seek a greater awareness of their own attitudes toward and connections with these educational processes. Learning to Teach: A Critical Approach to the Field Experience, Second Edition: *dramatically reconceptualizes the field experience by asking preservice and inservice teachers to be active and critical researchers of classroom practices and processes; *provides a coherent framework for analyzing both structural and cultural aspects of schooling; *provides specific exercises to help preservice and inservice teachers evaluate and understand the intersections of race, class, gender, and culture in "real life" school settings; and *grounds the observations of everyday school life within critical, feminist, and poststructuralist discourses. New

in the Second Edition: A new section, "No Child Left Untested," has been added to help preservice teachers explore the implications of a very changed post-September 11 world in which xenophobia, violence, patriotism, citizenship, and democracy have taken on new meanings. The introduction to the book as a whole, the section introductions, the retained activities in existing sections, and the references have been thoroughly updated.
