'The language is highly accessible and this makes it particularly suitable for undergraduate and international students at all levels. The combination of extended case material, shorter cases and illustrations of management in practice makes for a varied and stimulating approach. The activities will encourage and enable students to work independently to develop both their knowledge and skills.'

Abby Cathcart,  
Sunderland Business  
School, University of  
Sunderland'I like the activities that explicitly ask for critical reflection and am sure that my students will benefit from the development of their critical thinking skills. The

cases and examples in the book are helpful both because they come from a wide variety of national backgrounds and because companies like Ryanair and Nokia are familiar names!' Ad van Iterson, Organization and Strategy Department, Faculty of Economics and Business Administration, Maastricht University'All the case studies are both relevant and appropriate: there is a wide spread of international examples and a striking variety of organisations throughout the chapters, which will undoubtedly enhance the students' learning process.'

Business,

What is 'management', and what activities and behaviour does it entail?  
How do ideas and theories of management apply to commercial enterprise and other areas of work?  
How is the environment of management changing, and what are the impacts of recent trends?  
Management: An Introduction addresses these and many other

questions by providing a comprehensive account of the themes and functions of management. Aimed at the first-time student of the subject and written in a highly accessible style, this is an academically rigorous text which brings the topic to life with a wide range of appealing and readily identifiable examples. Among the most valuable features and aids to learning in the book are: Case studies on organisations as diverse as Ryanair, Vodafone/Ericsson and Oxfam, to provide relevant illustrations of theory in practice. Critical Reflections to encourage the application of personal experience and critical thinking to the issues in question. Skills Development Activities to build practical and work-based competences. full Glossary. A companion website at [www.pearsoned.co.uk/boddy](http://www.pearsoned.co.uk/boddy) provides tools for revision, such as self-assessment questions and flashcards, and for research, such as weblinks and case study

updates. David Boddy is a Research Fellow at the School of Business and Management, University of Glasgow. He is author of two other books published by Pearson Education: *Managing Information Systems: An Organisational Perspective* (2005), and *Managing Projects* (2002).

What's all this madness about money? Long ago, people traded rocks or sheep for the items they wanted, but rocks were heavy and sheep ran away. This beginning guide to economics will have readers thinking about the purpose, and not just the value, of money.

Global production and purchasing operations create a platform for entry into new markets. However, it takes considerable effort to plan and implement a sustainable globalization strategy; this book will help in that task. The wealth of experience and analysis featured in this book is the result of an extensive survey among

leading manufacturing companies as well as countless discussions with executives who have personally wrestled with the issues of "going global." The book treats the whole range of management challenges. In breadth and depth, the insights it offers surpass what a manager or most individual companies could acquire on their own.

For many CIOs, the value they deliver is elusive. It's not that they do not create positive business outcomes, it's that they have a hard time demonstrating value for the money spent. As a result, many IT leaders find themselves trapped in a vicious cycle of defending their budgets, cutting resources when times are tight, and struggling to keep pace with an insatiable business appetite for innovation. Meanwhile, business leaders increasingly rely on the cloud and other third parties for their technology needs, finding clear tradeoffs between cost, features, risk, and speed of delivery at their fingertips. CIOs must not

only compete with these alternatives, they must embrace the new reality of a multi-sourced, service-oriented world. Many IT leaders are taking a more proactive approach to optimizing value. By using shared facts about cost, consumption, quality, risk and performance, hundreds of CIOs have empowered value conversations centered on cost-for-performance, business-aligned portfolios, investments in innovation and enterprise agility. The tradeoffs they've illuminated changed the tone of their meetings and instilled a business mindset in IT decisions. By reading this book, you'll discover and learn the following: -A practical, applied framework -- called Technology Business Management -- for creating and using shared facts to make better decisions about people, technologies, services and investments -A standard taxonomy of resources, technologies and services for CIOs to translate between IT, financial, and business perspectives -Creating transparency to empower decision makers, demonstrate cost-efficiency, shape demand and plan in step

with the business-What your technology business model says about the value you deliver and the disciplines you employ-How to shift from project portfolio management to service portfolio management to both improve alignment and adopt more agile approaches to innovation and development-How to optimize run-the-business spending by optimizing infrastructure, outsources, labor and services and rationalizing your portfolios for better alignment-How to improve your ability to change the business by better governing innovation investments and improving enterprise agility-How to create and execute a roadmap for improving data and decision making capabilities over time while reaping rewards at every stage of maturity

 Course: Principles of Management is the introductory course taken by most undergraduate business majors. Almost every text/course is organized around the four functions of management: planning, leading, organizing, and controlling (PLOC). What

makes the texts different are their approach to the subject (principles vs. OB focused) and their strengths of coverage (high/strategic vs. low level/applied/skills). The aim of this text is to show how the four functions interact.
