Trying to get your message heard? Build an iconic brand?

Welcome to the battlefield. The story wars are all around us. They are the struggle to be heard in a world of media noise and clamor. Today, most brand messages and mass appeals for causes are drowned out before they even reach us. But a few consistently break through the din, using the only tool that has ever moved minds and changed behavior—great stories. With insights from mythology, advertising history, evolutionary biology, and psychology, viral storyteller and advertising expert Jonah Sachs takes readers into a fascinating world of seemingly insurmountable challenges and enormous opportunity. You'll discover how: • Social media tools are driving a return to the oral tradition, in which stories that matter rise above the fray • Marketers have become today's mythmakers, providing society with explanation, meaning, and ritual • Memorable stories based on timeless themes build legions of eager evangelists • Marketers and audiences can work together to create deeper meaning and stronger partnerships in building a better world • Brands like Old

Spice, The Story of Stuff, Nike, the Tea Party, and Occupy Wall Street created and sustained massive viral buzz Winning the Story Wars is a call to arms for business communicators to cast aside broken traditions and join a revolution to build the iconic brands of the future. It puts marketers in the role of heroes with a chance to transform not just their craft but the enterprises they represent. After all, success in the story wars doesn't come just from telling great stories, but from learning to live them.

The idiosyncrasies of human decision-making have confounded economists and social theorists for years. If each person makes choices for personal (and often irrational) reasons, how can people's choices be predicted by a single theory? How can any economic, social, or political theory be valid? The truth is, none of them really are. Mark Buchanan makes the fascinating argument that the science of physics is beginning to provide a new picture of the human or "social atom," and help us understand the surprising, and often predictable, patterns that emerge when they get together. Look at patterns, not people, Buchanan argues, and rules emerge that can explain how movements form, how interest groups operate, and even why ethnic hatred persists. Using similar observations, social physicists can predict whether neighborhoods will integrate, whether stock markets will crash, and whether crime waves will continue or abate. Brimming with mind games and provocative experiments, *The Social Atom* is an incisive, accessible, and comprehensive argument for a whole new way to look at human social behavior.

Potter Craft Bananas are grown in all tropical regions of the world and their production as an export commodity constitutes a key part of the economies of many low income food deficit countries, including Ecuador, Honduras, Guatemala, Côte d'Ivoire and the Philippines. This publication examines the impact of global trade developments on the world banana economy during the years 1985 to 2002, a period which saw export demand grow at an unprecedented rate. Topics discussed include: the evolution of imports and the trade policies of major importing markets including the EU, the United States and Japan; technology changes at production and transportation levels; environmental and social issues; and the role played by transnational corporations.

**Ageless Borobudur** Food & Agriculture Org.

This much-needed book brings together a wealth of information--most of which is presented in English for the first time--on a wide range of tropical fruit crops with economic potential in South-East Asia. The book begins with background data on the ecosystems and production systems that exist throughout the region. Detailed descriptions of the classification, characteristics, development, and propagation of tropical fruits follow, along with an examination of orchard establishment techniques and management. The book also focuses on the structural characteristics of tropical fruit crops and on the development of major commercial enterprises that serve both the domestic and international markets. It goes on to detail problems facing the industry as a whole, describing remedial measures--such as pest control, plant protection against diseases, weed control, drainage and irrigation, post-harvest technology, and mechanization--that can counter setbacks now and in the future. Finally, the book reviews issues that will play a major role in South-East Asian tropical fruit production in the twenty-first century. Copiously illustrated and extremely wide-ranging, *The Production of Economic Fruits in South-East Asia* is required reading for all students, specialists, commercial producers, and rural development specialists interested in the subject.

Hypobaric (low-pressure) storage offers considerable potential as a method to prevent postharvest loss of horticultural and other perishable commodities, such as fruit, vegetables, cut flowers and meat. Yet hitherto there has been no comprehensive evaluation and documentation of this method and its scientific basis. Written by the world's leading authority on hypobaric storage *Postharvest Physiology and Hypobaric Storage of Fresh Produce* fills this gap in the existing literature. The first part of the book provides a detailed account of the metabolic functions of gases, and the mechanisms of postharvest gas exchange, heat transfer and water loss in fresh produce. The effect of hypobaric conditions on each process is then considered, before a critical review of all available information on hypobaric storage. This includes horticultural commodity requirements, laboratory research, and the design of hypobaric warehouses and transportation containers.

*Buddhist Mystery in Stone, Decay and Restoration, Mendut and Pawon, Folklife in Ancient Java* How Baking Works Exploring the Fundamentals of Baking Science

This book introduces new concepts and mechanisms regarding the usage of both social media interactions and artifacts for peer education in digital educational games. Digital games in general, and digital educational games in particular, represent an area with a high potential for interdisciplinary innovation, not only from an information technology standpoint, but also from social science, psychological and didactic perspectives. This book presents an interdisciplinary approach to educational games, which is centered on information technology and aims at: (1) improving digital management by focusing on the exchange of learning outcomes and solution assessment in a peer-to-peer network of learners; (2) achieving digital implementation by using forms of interaction to change the course of educational games; and (3) providing digital support by fostering group-formation processes in educational situations to increase both the effects of educational games and knowledge exchange at the individual level. In addition to a systematic analysis of the relationship between software architecture, educational games and social media applications, the book also presents the implemented IT systems' architectures and algorithmic solutions as well as the resulting applicable evaluation findings from the field of interactive multimedia learning.

The first novel by Newbery Award-winning author Nancy Willard: A stunning story of magic and miracles, and a testament to the enduring power of faith and love Ben and Willie Harkissian are twin brothers (think Cain and Abel, Jacob and Esau) growing up in Ann Arbor, Michigan, on the eve of World War II. A baseball launched into the October sky sets in motion a series of events that transforms many lives. Ben leaves for the front and faces death—figuratively as well as literally. Left behind is Clare Bishop, who has been paralyzed from the waist down. But in exchange she receives some very special gifts. She can see the future, be at one with animals, and chat with Death. Willie Harkissian remains in Michigan as well, though his relationship with his brother will never be the same. A love story interrupted by war, this is also a novel about discovering the ordinary in the extraordinary and finding the miraculous in everyday life.

At this book's core is a critical edition of letters exchanged over 50 years between Anglo-Irish composer Elizabeth Maconchy (1907-1994) and the Welsh composer Grace Williams (1906-1977). These two innovative and talented women are highly regarded for their music, their professional activities and their roles in British musical life. The edition comprises around 200 letters from 1927 to 1977, none of which have been published before, along with scholarly introductions and contextualizations. Interwoven commentaries, in tandem with carefully constructed appendices, frame the letter texts. Moreover, the commentaries and introductory essays highlight and track the development of important themes and issues that characterize the study of twentieth-century British music today. This edition presents a dialogue, through both sides of a unique correspondence, offering an alternative commentary on musical and cultural developments of this period.
