Mapping of the Moon
After several decades spent in
astronomical semi-obscurity, the Moon

has of late suddenly emerged as an
object of considerable interest to
students of astronomy as well as of
other branches of natural science and
technology; and the reasons for this are
indeed of historical significance. For the
Moon has now been destined to be the
first celestial body outside the confines
of our own planet to be reconnoitered at
a close range by means of spacecraft
built and sent out by human hand for
this purpose. At the time of writing, not

less than ten such spacecraft of American as well as Russian origin landed already on different parts of the lunar surface; and some of these provided remarkable records of its detail structure to a spatial resolution increased thousandfold over that attained so far from our ground-based facilities. A renewed interest in our satellite, stemming from this source, on the part of the students of many branches of science and technology has also underlined the need for presenting the gist of our present knowledge in this field in the form that could serve as an introduction to the study of the Moon not only for astronomers, but also for serious students from other branches of science or technology.

ARGULA VON GRUMBACH (1492-1554/7)

McGill-Queen's Press - MQUP

It took all of thirty seconds for two shots to bring the world of Margaret Tabaaha crashing down around her. After losing her husband in Afghanistan during the first year of Operation Enduring Freedom, her two sons were all she had left. Now they had been taken from her violently, deliberately, plunging her into a whiskey bottle and stripping away her reason for living. When Arthur Nakai receives a call from his first love, Margaret, her voice pleading for his help, it comes as he is attending a wake for one of the men he considered a brother from his days in the Marines 6th LAR Wolf Pack Battalion. Feeling a deep and

responsible obligation to help her, Arthur soon finds himself involved in the multi-billion-dollar world of the oil and gas industry and coming face-to-face with an old adversary, Elias Dayton. Their paths had crossed when Arthur was a member of the Shadow Wolves, an elite tactical unit within US Customs and Border Protection. Now Dayton runs Patriot Security, a Blackwater-type firm that keeps the oil rigs, gas wells, and man camps secure from the Water Protectors, protesters pushing to stop the fracking and poisoning of Native lands. As Arthur works through the case from his end, Navajo police chief Jake Bilagody tackles it from another angle, looking into the strained relationship between the oil company and the Navajo people, all while searching for a missing Navajo

man that may have become an unwilling piece on the reservation checkerboard. But when Arthur learns the identity of the boys' killer, he struggles to make sense of it. Because if the clues are right, he will be forced to make a decision that will haunt him for the rest of his life.

A revolutionary look at Martin Luther, the Reformation, and the birth of publishing, on the eve of the Reformation's 500th anniversary When Martin Luther posted his "theses" on the door of the Wittenberg church in 1517, protesting corrupt practices, he was virtually unknown. Within months, his ideas spread across Germany, then all of Europe; within years, their author was not just famous, but infamous, responsible for catalyzing the violent wave of religious reform that would come to be known as the Protestant Reformation and engulfing Europe in decades of bloody war. Luther came of age with the printing press, and the path

to glory of neither one was obvious to the casual observer of the time. Printing was, and is, a risky business--the questions were how to know how much to print and how to get there before the competition. Pettegree illustrates Luther's great gifts not simply as a theologian, but as a communicator, indeed, as the world's first mass-media figure, its first brand. He recognized in printing the power of pamphlets, written in the colloquial German of everyday people, to win the battle of ideas. But that wasn't enough--not just words, but the medium itself was the message. Fatefully, Luther had a partner in the form of artist and businessman Lucas Cranach, who together with Wittenberg's printers created the distinctive look of Luther's pamphlets. Together, Luther

and Cranach created a product that spread like wildfire--it was both incredibly successful and widely imitated. Soon Germany was overwhelmed by a blizzard of pamphlets, with Wittenberg at its heart; the Reformation itself would blaze on for more than a hundred years. Publishing in advance of the Reformation's 500th anniversary, Brand Luther fuses the history of religion, of printing, and of capitalism--the literal marketplace of ideas--into one enthralling story, revolutionizing our understanding of one of the pivotal figures and eras in human history.

High Density Plasma Sources Upkar Prakashan

'De Bernieres is a singular, cherishable voice' Mail on Sunday From the master

of historical fiction, this book follows an unforgettable family after the Second World War. Some bonds are hard to break... Daniel Pitt was an RAF fighter in the First World War and an espionage agent for the SOE in the Second. Now the conflicts he faces are closer to home. Daniel's marriage has fractured beyond repair and Daniel's relationship with his son, Bertie, has been a failure since Bertie was a small boy. But after his brother Archie's death, Daniel is keen for new perspectives. He first travels to Peshawar to bury Archie in the place he loved best, and then finds himself in Canada, avoiding his family and friends back in England. Daniel and Bertie's different experiences of war, although devastating, also bring with them the opportunity for the two to reconnect. If

only they can find a way to move on from the past...

The Moon and the Condition and Configurations of Its Surface

Nieuwkoop : B. de Graafs

At a time when women were expected to stick to their household duties, according to Peter Matheson, Argula von Grumbach burst through every barrier. Matheson offers here a biography of the Reformation's first woman writer. Argula von Grumbach's first pamphlet in 1523 was reprinted all over Germany. Thousands of copies of her eight pamphlets appeared. Through her writing, von Grumbach defied her Bavarian princes (and her husband), denounced censorship, argued for an educated church and society, and developed her own understanding of

faith and Scripture. She even intervened in the Imperial Diets at Nuremberg and Augsburg. Drawing for the first time on her correspondence, the author shows how von Grumbach paid dearly for her outspokenness but remained undaunted. Though some saw her as a she-devil and others as a harbinger of a new age, Matheson shows von Grumbach as a woman engaged in the life of the villages where she lived, as one motivated by the dreams she had for her children. In a time of sweeping change and risking everything for the light and truth she was given, Argula von Grumbach showed what the vision and determination of one person could achieve.

A NEW PHOTOGRAPHIC ATLAS OF

THE MOON

Palala Press

This book presents a comprehensive description of the most promising high density plasma sources operated at low and intermediate pressures which are used, or could be used, in plasma processing such as etching and deposition. The authors are the leading experts in the field who are original inventors and designers of plasma sources they describe in this book. This book gives a balanced treatment of both the theoretical aspects and practical applications. It should be of considerable interest to scientists and engineers working on plasma source designs and process developments.

Death Waits in the Dark Wipf and

Stock Publishers

The aim of the present book has been to provide an outline - the first of its kind - of the history of the human efforts to map the topography of the surface of our satellite, from the days of pre-telescopic astronomy up to the present. These efforts commenced modestly at the time when the unaided eye was still the only tool at the disposal of men interested in the face of our satellite; and were continued since for more than three centuries by a small band of devoted friends of the Moon in several countries. Many of these were amateur astronomers, and almost all were amateur cartographers; though some highly skilled in their art. The reader interested in the history of lunar mapping between 1600 and 1960 will find its

outline in the first chapter of this book; and can follow the way in which the leadership in the mapping of the Moon, the cradle of which stood in Italy, passed successively to France, Germany, and eventually to the United States. All efforts described in this chapter were wholly superseded by subsequent developments since 1960, largely motivated by logistic needs of a grand effort which culminated with repeated manned landings on the Moon between 1969-1972- a feat which will remain for ever one of the glories of our century. *Hydrogen Storage Materials* Springer Science & Business Media

During his tenure as the Regius Professor of Medicine at Oxford from 1905-1919, Sir William Osler amassed a considerable library on the history of

medicine and science. A Canadian native, Osler had studied at McGill University and decided to leave his collection of 7,600 items to its Faculty of Medicine. A catalogue, the *Bibliotheca Osleriana*, was compiled - a labour of love that took ten years to complete and involved W.W. Francis, R.H. Hill, and Archibald Malloch. Osler himself laid down the broad outlines of the catalogue and wrote many of the annotations. [Bibliotheca Spenceriana ...](#) William Andrew

The United Nations Educational, Scientific and Cultural Organization (UNESCO) presents a biographical sketch of the German religious Katharina von Bora (1499-1552) as part of its World Heritage in Germany Web resource. Katharina von Bora was the wife of the

German religious reformer Martin Luther (1483-1546).

Life at the Nanoscale Springer Science & Business Media

A favourable reception of the first edition of this book - due no doubt to the nature of its subject - which went out of print in 2 years, gave its author a welcome opportunity to update at present its contents. This was all the more necessary, as seldom in the annals of science has our knowledge of the physics and astronomy of the Moon made greater progress than during this time. The real heroes of this advance have, of course, been the spacecraft - 33

of which have now been sent out since 1959 to reconnoiter our satellite at a close range. The hard-landers among them just about delivered their message by the time when the first edition of this book went to the press; but it was the soft-landers and orbiters, which followed in their wake between 1966-67, that became really the principal contributors to lunar research. By now that it may be both timely and their programmes have likewise been completed; so opportune to take stock of the present state of our subject now - on the eve of the next stage of lunar exploration by manned landings on the surface of our satellite- which can be expected to take place in the very near future. * The aim of the second edition of this book will be to provide the requisite information,

brought up to date in an organized manner.

The Moon, Considered As a Planet, a World, and a Satellite CRC Press

Proceeding from basic fundamentals to applications, this volume provides a comprehensive overview of the use of AFM and related scanning probe microscopies for cell surface analysis. It covers all cell types, from viruses and protoplasts to bacteria and animal cells. It also discusses a range of advanced AFM modalities, including high-resolution imaging, nanoindentation measurements, recognition imaging, and single-molecule and single-cell force spectroscopy. The book covers methodologies for preparing and analyzing cells and membranes of all kinds and highlights recent examples to

illustrate the power of AFM techniques in life sciences and nanomedicine.
