Telecommunication Switching Systems And NetworksA  
Telecommunication network is a group of systems that establishes a distant call. The switching

systems are part of a telecommunication network. The switching stations provide connection between different subscribers. Such switching systems can be grouped to form a telecommunication network. The switching systems are connected using lines called the Trunks.TSSN - Switching Systems - TutorialspointThe text covers, in a single volume, both switching systems and telecommunications

networks. The book begins with a brief discussion on the evolution of telecommunication. It then goes on to give a classification scheme for switching systems, and describes the basic components of a switching system and the fundamental concepts of network structures. TELECOMMUNICATION SWITCHING SYSTEMS AND NETWORKS ...A distinguishing feature of the book is the thorough treatment of the most important telecommunication networks, viz. the public switched telephone network (PSTN), the public data network (PDN), and the integrated services digital network (ISDN).
