scale for all of
the 50%
Advanced
Energy Design
Guides. This
Guide focuses
on small to

medium office buildings up to 100,000 ft². Office buildings include a wide range of office types and related activities such as administrative, professional, government, bank or other financial services, and medical offices without medical diagnostic equipment. These facilities typically include all or some of the following space types: open plan and private offices, conference

and meeting spaces, corridors and transition areas, lounge and recreation areas, lobbies, active storage areas, restrooms, mechanical and electrical rooms, stairways, and other spaces. This Guide does not cover specialty spaces such as data centers, which are more typical in large office buildings. The specific energy-saving recommendations in this Guide are summarized in a single table

for each climate zone and will allow contractors, consulting engineers, architects, and designers to easily achieve advanced levels of energy savings without detailed energy modeling or analyses. In addition, this Guide provides a greater emphasis on integrated design as a necessary component in achieving 50% energy savings and devotes an

entire chapter to integrated design strategies that can be used by teams who do not wish to follow the specific energy saving recommendations.

Commercial and Institutional End Uses of Water

American Water Works Association This manual contains information needed to estimate customer demand and maximum expected flow that can be used to size new service

lines and meters. The data presented in M22, Sizing Water Service Lines and Meters, were obtained from field measurements, utility surveys, technical publications, and hydraulic design calculations. The methods contained in this manual are appropriate for technicians, architects, and engineers to address most service conditions.

COMMERCIAL INVESTMENT REAL ESTATE

Transportation Research Board The ICC 700-2020 National Green Building Standard® (NGBS) is an American National Standards Institute (ANSI) -- approved, residential building standard. This fourth edition was developed by an independent consensus committee of a broad range

of stakeholders in partnership between the International Code Council and the National Association of Home Builders. The NGBS outlines a variety of green design and construction practices that can be incorporated into your single-family, multifamily, and mixed-use buildings, either for new construction or remodeling. The NGBS also includes green practices for land development

projects as well as assisted living facilities, residential board, and care facilities, and group homes. The NGBS includes high-performance building practices in six areas: Lot Design and Development, Resource Efficiency, Water Efficiency, Energy Efficiency, Indoor Environmental Quality, and Building Operation & Maintenance. The NGBS has four primary certification

levels--Bronze, Silver, Gold and Emerald, providing residential building professionals options to integrate sustainability and high-performance into their project at a level most appropriate for their business model, customer base and local housing market. A new compliance path (Certified) customized for single-family and townhome dwellings is added in the

2020 Edition. The NGBS also offers a compliance path for residential and mixed-use communities with four levels of land development practices, ranging from One-Star through Four-Star. The 2020 edition expands the application of innovative practices, offers additional options towards achieving certification, and builds upon a decade strong foundation of program use.

The NGBS continues to provide architects, builders, and developers the flexibility needed to design and construct homes and mixed-use buildings that are sustainable, cost-effective and appropriate for a home's geographic location. The Greenhouse Gas Protocol Prentice Hall This practical application reference provides a resource for those seeking to utilize the innovative methods now available to finance energy projects. The full scope of current project financing practices are fully examined and assessed, including coverage of energy service performance contracting, rate of return analysis, measurement and verification of energy savings, and more. Readers will receive the facts they need to assess a project's payback in

advance, anticipate and avoid potential risks and/or hidden costs, and assure that your energy project is an overall economic success. Other topics covered include financing international projects and ESCO's (Energy Service Company's) financing.

United States
Annual
 American Water Works Association Provides estimated water savings,

benefits and costs for measures. Includes tables, charts, photos, eight appendices, glossary, and index.

Income Averaging IWA Publishing A comprehensive study reference used to prepare for the LEED AP BD+C specialty exam. This guide provides a detailed and efficient approach to studying through the use of concise text and detailed, full-color

illustrations and photos and compliments the LEED v4 Reference Guide for Building Design and Construction.

Water Meter Reader
 University of Georgia, Carl Vinson Institute of Government
 This book provides detailed information on how to set up Deep Energy Retrofits (DERs) in public buildings, and shares in-depth insights into the current status of the major

technologies, strategies and practical best practice examples of how to cost-effectively combine them. Case studies from Europe are analyzed with respect to energy use before and after renovation, reasons for undertaking the renovation, co-benefits achieved, resulting cost-effectiveness, and the business models employed. The building sector holds the potential

for tremendous improvements in terms of energy efficiency and reducing carbon emissions, and energy retrofits to the existing building stock represent a significant opportunity in the transition to a low-carbon future. Moreover, investing in highly efficient building materials and systems can replace long-term energy imports, contribute to cost cutting, and create a wealth of new

jobs. Yet, while the technologies needed in order to improve energy efficiency are readily available, significant progress has not yet been made, and “best practices” for implementing building technologies and renewable energy sources are still relegated to small “niche” applications. Offering essential information on Deep Energy Retrofits, the book offers a

valuable asset for architects, public authorities, project developers, and engineers alike.

LEED

Reference Guide for Building Design and Construction

American Water Works Association The GHG Protocol Corporate Accounting and Reporting Standard helps companies and other organizations to identify, calculate, and report GHG emissions. It is designed to

set the standard for accurate, complete, consistent, relevant and transparent accounting and reporting of GHG emissions.

DOE this Month John Wiley & Sons 'TRB's Airport Cooperative Research Program (ACRP) Report 54: Resource Manual for Airport In-Terminal Concessions provides guidance on the development and implementation of airport concession

programs. The report includes information on the airport concession process; concession goals; potential customers; developing a concession space plan and concession mix; the Airport Concessions Disadvantaged Business Enterprise (ACDBE) program; and concession procurement, contracting, and management practices"-- Publisher's description.

Electrical Safety Orders
Organization of American States
"Published in cooperation with the Association County Commissioner s of Georgia."
Advanced Energy Design Guide for Small to Medium Office Buildings
National Learning Corporation
Describes over 40 major sustainability issues, ranging from the management of natural resources (waste, water,

energy, etc.), to development control, satisfaction of tourists and host communities, preservation of cultural heritage, seasonality, economic leakages, or climate change. For each issue, indicators and measurement techniques are suggested with practical information sources and examples. Contains a procedure to develop destination-specific indicators, their use in

tourism policy and planning processes, as well as applications in different destination types (e.g. coastal, urban, ecotourism, small communities). Numerous examples and 25 case studies provide a range of experiences at the company, destination, national and regional levels from all continents.

WATER DEMAND MANAGEMENT

American

<p>Society of Heating Refrigerating and Air-Conditioning Engineers This White Paper sets out the Government's detailed proposals for the reform of the planning system, in light of the recommendations made by the Barker Review of Land Use Planning (2006, ISBN 9780118404853) and the Eddington Transport Study (2006, ISBN 9780118404877). These proposals are</p>	<p>designed to ensure the planning system can meet a number of challenges including: climate change, supporting sustainable economic development, increasing the supply of housing, protecting and enhancing the environment and natural resources, improving local and national infrastructure and maintaining security of energy supply. For the first time, the</p>	<p>reforms cover all development consent regimes, including those for major energy, water, transport and waste development, as well as the town and country planning system. The proposals are based on five core principles: i) responsiveness and integration of economic, social and environmental objectives to deliver sustainable development; ii) a planning</p>
---	--	---

<p>system which is streamlined efficient and predictable; iii) full and fair opportunities for public consultation and community engagement; iv) transparency and accountability; and v) planning decisions taken at the right level of government, whether national, regional or local. <u>Sizing Water Service Lines and Meters</u> Organisation mondiale du tourisme Submetering</p>	<p>of Building Energy and Water UsageLEED Reference Guide for Building Design and ConstructionF & S Index United States AnnualSource Book of Alternative Technologies for Freshwater Augmentation in Latin America and the CaribbeanOrg anization of American StatesWater Meter ReaderNation al Learning Corporation <i>Water Matters</i> American Water Works Association</p>	<p>This new manual discusses the benefits of water conservation programs that are carefully designed and implemented. It is a water conservation planning guide for city water utilities that provides worksheets, steps, goals, and program participant responsibilities and roles. It also discusses water conservation rates, support for water pricing adjustments, involvement of various outside</p>

groups, obstacles to overcome, the efficient utilization of available sources of supply, public recognition and participation, and success measurement.

2018

International Mechanical Code, Loose-Leaf Version

American Water Works Association
The purpose of the Commercial and Industrial End Uses of Water study is to: Summarize and interpret the existing knowledge base on

commercial and institutional (CI) uses of utility-supplied potable water in urban areas; Present the results of field studies in a sample of 25 establishments in five urban areas; Provide econometric end use models for various categories of CI customers; and Develop a set of efficiency benchmarks for five important CI categories - restaurants, hotels and motels, supermarkets, office

buildings, and schools.

MANUFACTURED HOME MERCHANDISER

Amer Water Works Assn Learning to Think Spatially examines how spatial thinking might be incorporated into existing standards-based instruction across the school curriculum. Spatial thinking must be recognized as a fundamental part of K-12 education and as an integrator and

a facilitator for problem solving across the curriculum. With advances in computing technologies and the increasing availability of geospatial data, spatial thinking will play a significant role in the information-based economy of the twenty-first century. Using appropriately designed support systems tailored to the context, spatial thinking can

be taught formally to all students. A geographic information system (GIS) offers one example of a high-technology support system that can enable students and teachers to practice and apply spatial thinking in many areas of the curriculum.
