THE LEADER IN ME

Createspace Independent Publishing Platform This timely interdisciplinary book brings together a wide spectrum of theoretical concepts and their empirical applications in relation to the COVID-19 pandemic, informing our understanding of the social

and psychological bases of a global crisis. Written by an author team of psychologists and sociologists, the volume provides comprehensive coverage of phenomena such as fear, risk, judgement and decision making, threat and uncertainty, group identity and cohesion, social and institutional trust, and communication in the context of an international health

emergency. The topics have been grouped into four main chapters, focusing on the individual, group, social, and communication perspectives of the issues affecting or being affected by the pandemic, based on over 740 classic and current references of peer-reviewed research and contextualized with an epidemiological perspective discussed in the introduction. The volume finishes with two special

sections, with a chapter on cultural specificity of the social impact of pandemics, focusing specifically on both Islam and Hinduism, and a chapter on the cross-national differences in policy responses to the current health crisis. Providing not just a reference for academic research, but also short-term and long-term policy solutions based on successful strategies to combat

adverse social, cognitive, and emotional consequences, this is the ideal resource for academics and policymakers interested in social and psychological determinants of individual reactions to pandemics, as well as in fields such as economics, management, politics, and medical care.

Children in today's world are inundated with information about who to be, what to do and how to live. But what if there was a

way to teach children how to manage priorities, focus on goals and be a positive influence on the world around them? The Leader in Me is that programme. It's based on a hugely successful initiative carried out at the A.B. Combs Elementary School in North Carolina. To hear the parents of A. B. Combs talk about the school is to be amazed. In 1999, the school

debuted a programme that taught The 7 Habits of Highly Effective People to a pilot group of students. The parents reported an incredible change in their children, who blossomed under the programme. By the end of the following year the average end-of-grade scores had leapt from 84 to 94. This book will launch the message onto a much larger platform. Stephen R.

Covey takes the 7 Habits, that have already changed the lives of millions of people, and shows how children can use them as they develop. Those habits -- be proactive, begin with the end in mind, put first things first, think win-win, seek to understand and then to be understood, synergize, and sharpen the saw -- are critical skills to learn at a young age and bring incredible results, proving that

it's never too early to teach someone how to live well. *Business Result* Oxford University Press, USA A new course with a strong focus on student motivation and communicative outcomes. The package includes DVDs and interactive whiteboard resources.

How PEOPLE LEARN

Cambridge University Press African Islands provides the first geographically and chronologically comprehensive overview of the archaeology of African islands. This book draws archaeologically informed histories of

African islands into a single synthesis, focused on multiple issues of common interest, among them human impacts on previously uninhabited ecologies, the role of islands in the growth of long-distance maritime trade networks, and the functioning of plantation economies based on the exploitation of unfree labour. Addressing and repairing the longstanding

neglect of Africa in general studies of island colonization, settlement, and connectivity, it makes a distinctively African contribution to studies of island archaeology. The availability of this much-needed synthesis also opens up a better understanding of the significance of African islands in the continent's past as a whole. After contextualizin

g chapters on island archaeology as a field and an introduction to the variety of Africa's islands and the archaeological research undertaken on them, the book focuses on four themes: arriving, altering, being, and colonizing and resisting. An interdisciplinary approach is taken to these themes, drawing on a broad range of evidence that goes beyond material remains to

include genetics, comparative studies of the languages, textual evidence and oral histories, island ecologies and more. African Islands provides an up-to-date synthesis and account of all aspects of archaeological research on Africa's islands for students and academics alike.

Facilitating Community Research for Social Change
Simon and Schuster
THE book for

elementary education mathematics content courses! Designed to help prospective teachers of elementary school mathematics learn content beyond the rote level, this text stimulates readers to think beyond just getting the problem right and fosters their development into thoughtful, reflective, self-motivated, life-long learners. It stresses the

what and why of elementary school mathematics content. Hints are provided about how to teach the content but this is mostly left to courses and texts that are dedicated to that purpose. The text is organized around the National Council for Teachers of Mathematics' Principles and Standards for School Mathematics. The Standards dictate the basic sections of the text. Within each section,

appropriate specific topics are developed, intertwined with technology, problem solving, assessment, equity issues, planning, teaching skills, use of manipulatives, sequencing, and much more. In addition, major focal points of the Standards are emphasized throughout: effective teachers of mathematics should be able to motivate all students to learn, should understand

the developmental levels of how children learn, should concentrate on what children need to become active participants in the learning environment, and should be engaged in ongoing investigations of new mathematical concepts and teaching strategies. Mathematics Content for Elementary Teachers is based on several fundamental premises:
*The focus of mathematics

education should be on the process, not the answer.
*Elementary teachers should know the mathematics content they are teaching, know more than the content they are teaching, and teach from the overflow of knowledge. *It is important for teachers to be flexible in allowing students to use different procedures--teaching from the "overflow of knowledge" implies knowing how

to do a given operation more than one way and being willing to examine many different ways.
*Teachers need to learn to carefully cover the topics to be taught, to reflect upon them, and to be able to organize them. To help prospective elementary teachers concentrate on the mathematics content they will be expected to teach and begin to build the foundation for the

methods they will use, this text includes only elementary mathematics content and does not address middle school concepts. Pedagogical features: *The text is organized according to NCTM Standards. *An informal writing style speaks directly to readers and is geared to pre-

service teachers. *Focus is given to multiple methods of problem solving at four developmental levels. *Questions, exercises, and activities are interspersed throughout each section rather than gathered at the end of each chapter. *Complete solutions for exercises are provided.
