Techniques and Methods for Complex Industrial Systems S. Chand Publishing
 The International Conference on Industrial Engineering and Engineering Management is sponsored by the Chinese Industrial Engineering Institution, CMES, which is the only national-level academic society for Industrial Engineering. The conference is held annually as the major event in this arena.

Being the largest and the most authoritative international academic conference held in China, it provides an academic platform for experts and entrepreneurs in the areas of international industrial engineering and management to exchange their research findings. Many experts in various fields from China and around the world gather together at the conference to review, exchange, summarize and promote their achievements in the fields of industrial engineering and engineering management. For example, some experts pay special attention to the current state of the application of related techniques in China as well as their future prospects, such as green product design, quality control and management, supply chain and logistics management to address the

need for, amongst other things low-carbon, energy-saving and emission-reduction. They also offer opinions on the outlook for the development of related techniques. The proceedings offers impressive methods and concrete applications for experts from colleges and universities, research institutions and enterprises who are engaged in theoretical research into industrial engineering and engineering management and its applications. As all the papers are of great value from both an academic and a practical point of view, they also provide research data for international scholars who are investigating Chinese style enterprises and engineering management.

Microbial Endophytes: Prospects for Sustainable Agriculture discusses the practical and theoretical aspects regarding the use of endophytic microorganisms in agriculture, providing insights on the biotechnological applications associated with long-term crop production. Chapters deal with the various aspects of endophytic microorganisms, including isolation, enumeration, characterization procedures, diversity analysis, and their role as biofertilizer, biocontrol agent and microbial inoculants. Framed to discuss the present and future potential of microbial endophytes in biotic and abiotic stress management, bioremediation, bioactive compounds production, and in nanotechnology, this book provides a single-volume resource that will be valuable to academics and researchers interested in microbiology, agricultural sciences and biotechnology. Explores aspects of sustainable agriculture by using endophytic microorganism such as bacteria, fungi and actinobacteria Presents insights into the use of endophytes as biofertilizer and biocontrol agents in sustainable agriculture Relates endophyte organisms and nano-technology

HYDRAULICS AND PNEUMATICS CONTROLS

CRC Press

For close to 20 years, [Industrial Engineering and Production Management] has been a successful text for students of Mechanical, Production and Industrial Engineering while also being equally helpful for students of other courses including Management. Divided in 5 parts and 52 chapters, the text combines theory with examples to provide in-depth coverage of the subject.

Industrial Engineering S. Chand Publishing

This book promotes and describes the application of objective and effective decision making in asset management based on mathematical models and practical techniques that can be easily implemented in organizations. This comprehensive and timely publication will be an essential reference source, building on available literature in the field of asset management while laying the groundwork for further research breakthroughs in this field. The text provides the resources necessary for managers, technology developers, scientists and engineers to adopt and implement better decision making based on models and techniques that contribute to recognizing risks and uncertainties and, in general terms, to the important role of asset management to increase competitiveness in organizations.

Proceedings of the AHFE 2019 International Conference on Human Aspects of Advanced Manufacturing, and the AHFE International Conference on Advanced Production

Management and Process Control, July 24-28, 2019, Washington D.C., USA New Age International

The present book on Elements of Mechanical Engineering is meant for the engineering students of all branches at their first year level. It covers the new syllabus of panjab Technical University, Jalandhar. However, it shall be useful to students of other Universities also. The book covers the basic principles of Thermodynamics, zeroth law of Thermodynamics and the concept of temperature in the first chapter.

Career Counseling And Guiding Is A Very Important And Contemporary Topic. This Book Encompasses All Aspects Of Career Planning And Development As These Are Ongoing Aspects At Different Phases/Periods Of One S Life. The Book Concentrates On Practicalities With Reference To Indian Scenario, Starting From Beginner S Viewpoint And Extending To Mid-Career And Career Change Aspects. It Explains All Different Steps/Levels Of Career Counseling. It Gives Detailed Insight Of Various Types Of Résumés And Interviews And Exhibits Near Real Life Résumés And Interview Questions. For Beginners, It Illustrates Various Career Options Available At All Educational Levels And Institutions And Competitions Needed For Those. It Also Shows Work/Job Openings For Different Education/Experience Levels. In Short, The Book Ideally Serves The Purpose Of A Professional Career Counselor.

Quality Assurance in Higher Education in Eastern and Southern Africa Woodhead Publishing

Two new chapters on general Thermodynamic Relations and Variable Specific Heat have been Added. The mistake which had crept in have been eliminated. We wish to express our sincere thanks to numerous professors and students, both at home and abroad, for sending their valuable suggestions and also for recommending the book to their students and friends.

International Asia Conference on Industrial Engineering and Management Innovation (IEMI2012) Proceedings CRC Press

This book discusses the latest advances in manufacturing and process control, with a special emphasis on digital manufacturing and intelligent technologies for manufacturing and industrial processes control. The human aspect of the developed technologies and products, their interaction with the users, as well as sustainability issues, are covered in detail. Development of new products using rapid prototyping systems, remote fabrication, and other advanced techniques, is described in detail, highlighting the state-of-the-art and current challenges. Based on both the AHFE 2019 International Conference on Human Aspects of Advanced Manufacturing, and the AHFE 2019 International Conference on Advanced Production Management and Process Control, held on July 24-28, 2019, in Washington D.C., USA, this book also highlights important strategies for managing enterprise of the future.

Modeling and Analysis S. Chand Publishing

Crowdsourced Data Management: Industry and Academic Perspectives aims to narrow the gap between academics and practitioners in this burgeoning field. It simultaneously introduces academics to real problems that practitioners encounter every day, and provides a survey of the state of the art for practitioners to incorporate into their designs.

Scaling between Top line & Bottom line S. Chand Publishing

This text is an accessible and comprehensive guide to the principles, practices, functions and challenges of maintenance engineering and management. With a strong emphasis on basic concepts and practical techniques throughout, the book demonstrates in detail how effective technical competencies in maintenance management can be built in engineering organizations. The book thus provides students and practising engineers alike with the methodologies and tools needed to understand and implement the systems approach to maintenance management. The major goals for the text include : To provide a good understanding of different types of maintenance management systems such as breakdown, preventive, predictive, proactive. To explain benefits of planned maintenance. To explain condition-based monitoring techniques with focus on vibration monitoring, thermography, and motor condition monitoring. To stress the role of reliability engineering in maintenance with tools like Failure Mode and Effect Analysis, Root Cause Analysis, and Criticality Matrix. To explain activities of maintenance planning with focus on shutdown planning, human resources development, and tools employed for monitoring. To emphasize management functions such as procurement of spares, measurement of maintenance effectiveness, etc. To give an overview of project management tools such as PERT etc. To introduce computerized maintenance management systems. To explain the basics of hazard analysis and fault tree analysis. Review questions in each chapter, worked-out examples wherever applicable, case studies and an exclusive appendix on “Selected Questions and Answers” are all designed to provoke critical thinking. This text is suitable for undergraduate and postgraduate courses in Maintenance Engineering taught in the department of mechanical engineering in almost all universities.

Prospects for Sustainable Agriculture Educreation Publishing

Scaling between top line & Bottom line. Here top line for service provider is about adding on sales and revenues by adding customers and work scope, whereas bottom line remains to be customer prerogative with focus on improving income with enhanced profitability. In simple words maintenance is profit centre for service provider, whereas cost center for any Industry. As Client and service provider both being on contrarian side, differences are obvious. Successful partnership is all about collaboration way beyond obvious. Elaborating the concise business model of outsourcing, precisely relevant to maintenance and touching all its components as evident in the current industrial scenario. There is a lot of books available for technology/ process parts and also covering other areas in isolation, but need of single book integrating all aspects of maintenance outsourcing was long felt. The objective here is to provide a holistic view of maintenance outsourcing in all dimensions from both customer and service provider perspective explaining different aspects of business in a nutshell. Outsourcing Maintenance is for: • Management of any Industry looking for outsourcing maintenance or review the existing contract. • Anyone, i.e., people in the maintenance team including shop floor personnel, contract cell, SCM, HR, safety, etc. • All people in the maintenance business, i.e., facility management, asset management, service/maintenance contract, AMC, etc.

Capacity Building Through Heritage Tourism World Health Organization

This book presents the most important tools, techniques, strategy and diagnostic methods used in industrial engineering. The current widely accepted methods of diagnosis and their properties are discussed. Also, the possible fruitful areas for further research in the field are identified.

Industrial Management and Business Administration Arcturus Publishing

The book has been thoroughly revised. Several new articles have been added, specifically, in chapters in mortar, Concrete, Paint: Varnishes, Distempers and Antitermite treatment to make the book to still more comprehensive and a useful unit for the students preparing for the examination in the subject. *Advances in Manufacturing, Production Management and Process Control* S. Chand Publishing Over the last 50 years, the theory and the methods of reliability analysis have developed significantly. Therefore, it is very important to the reliability specialist to be informed of each reliability measure. This book will provide historical developments, current advancements, applications, numerous examples, and many case studies to bring the reader up-to-date with the advancements in this area. It covers reliability engineering in different branches, includes applications to reliability engineering practice, provides numerous examples to illustrate the theoretical results, and offers case studies along with real-world examples. This book is useful to engineering students, research scientist, and practitioners working in the field of reliability.

Publisher's Monthly McGraw Hill Professional

This book examines the critical aspect of quality assurance maintenance of competitive-standards in African higher education. It explores both the micro and macro-levels of continental African higher education regulatory authorities, and analyses different institutional, regional and national practices for moving towards continental quality assurance approaches. Contributed to by scholars across Eastern and Southern Africa, the book considers conceptual, practical, epistemological and policy dimensions of quality and quality assurance, especially in relation to higher education in Africa. It therefore draws on research and local expertise to open up debate about how to assure and enhance the quality of higher education, providing a comprehensive review of eight countries and considers societal challenges. It aims to satisfy the need of more thoughtful and critical works on African education as produced by African educators. The uniqueness of this book lies in integrating both the theoretical and practical dimensions of quality to devise appropriate strategies for ensuring quality and standards in higher education in continental Africa and beyond. This authoritative book advocates for a timely discussion around the provision of good quality higher education and research in African universities, and will be of great interest to academics, policy makers, researchers and post-graduate students in the fields of higher education, comparative education and African studies.

MAINTENANCE ENGINEERING AND MANAGEMENT Project Management Institute

This volume provides a comprehensive account of the valuable tangible and intangible benefits of the development of heritage tourism. Tourism development is widely acknowledged as a crucial tool to foster the development of rural and urban areas. To this end, this book presents nine case studies from international authors that reflect how tourism development is helpful—economically, socially, and otherwise—for community capacity building. The case studies from the countries of Spain, Portugal, Australia, Dubai, Bangladesh, Nigeria, and India demonstrate the uses of various management strategies and methods for rural and urban areas, and cover some of the major topics related to community-based tourism, community capacity building, and community participation in developing heritage tourism. Chapters consider the conservation of heritage resources and tourism promotion of destinations that provide opportunities to local communities to strengthen their

economies and social standards. Key features: water conservation in urban landscape as natural, cultural, and historic tourism resources spiritual and religious heritage tourism cultural tourism and the support of public and private funds economic development and its effect on cultural and natural resources public-private-partnerships to ensure sustainable development talent management challenges tribal tourism and tribal festivals, which are the mirror of their culture and could be major tourist attractions The methodologies and proposed management strategies discussed by the book's researchers and professors will be valuable for policymakers, administrators, tourism promoters, researchers, and academicians who are involved with the tourism industry.

Career Counseling Springer

Ghouls, ghosts, and macabre terrors stalk the night in this spine-tingling collection. With tales describing unnatural frights and haunting visions of cosmic terror, you will be taken on a journey into the disturbing imaginations of some of horror's greatest writers. The stories' heroes face incredible creatures, unknowable gods, and supernatural beings who have no regard for human life. Horror literature has its roots in the mists of time. In the 19th century, writers delved into ancient folk tales and local legends to inspire an entire genre. In the 20th century, the next generation of writers brought to life a brand new array of terrifying monsters. The authors in this volume range from Victorian pioneers, such as Bram Stoker and Edgar Allan Poe, to the pulp writers of the 20th century, such as William Hope Hodgson and H. P. Lovecraft. The tradition of horror writing that developed took very different turns on either side of the Atlantic - while American authors turned to unknowable horrors and cosmic terrors, British writers such as E. F. Benson and M. R. James mastered a more familiar form, the classic ghost story. It was not only English-speakers who sought to terrify their readers. The French writer Guy de Maupassant, a prolific short story writer and pupil of the acclaimed novelist Gustave Flaubert, found ways to make his protagonists doubt their own sanity as they faced terrors that would drive any ordinary man mad. This collection of bone-chilling tales comes from the pens of some of horror's most acclaimed writers. Authors include: E. F. Benson Ambrose Bierce Francis Marion Crawford W. W. Jacobs M. R. James William Hope Hodgson H. P. Lovecraft Guy de Maupassant Edgar Allan Poe Bram Stoker

This book captures deploying Industry 4.0 technologies for business excellence and moving towards Society 5.0. It addresses applications of Industry 4.0 in the areas of marketing, operations, supply chain, finance, and HR to achieve business excellence. Industry 4.0 Technologies for Business Excellence: Frameworks, Practices, and Applications focuses on the use of AI in management across different sectors. It explores the benefits through a human-centered approach to resolving social problems by integrating cyberspace and physical space. It discusses the framework for moving towards Society 5.0 and keeping a balance between economic and social gains. This book brings together researchers, developers, practitioners, and users interested in exploring new ideas, techniques, and tools and exchanging their experiences to provide the most recent information on Industry 4.0 applications in the field of business excellence. Graduate or postgraduate students, professionals, and researchers in the fields of operations management, manufacturing, healthcare, supply chain, marketing, finance, and HR will find this book full of new ideas, techniques, and tools related to Industry 4.0.

Horror Short Stories Concept Publishing Company

The Book Is Primarily Intended To Meet The Demands For A Textbook On The Subject That Systematically Covers The Complete Syllabus Of Uptu On Industrial Engineering For The Second Year B.Tech. Students Of Mechanical, Industrial, Production And Metallurgical Engineering Branches. The Book Precisely Covers The Material In Required Details In A Lucid Manner Using Simple English To Enable An Average Student To Grasp The Subject. Sufficient Solved Examples Have Been Included Throughout The Text To Illustrate The Concepts. Simple Illustrative Reproducible Sketches And Diagrams Have Been Given To Help In Easy Comprehension Of The Subject. The Book Includes The Basic Topics On Industrial Engineering In Twenty Three Chapters. The First Chapter Presents A Detailed Introduction Highlighting The Subject Along With Its Need And Importance. The Book Covers Topics Like: Productivity, Workstudy, Job Evaluation, Plant Layout, Materials Handling, Production Planning And Control, Depreciation, Replacement Analysis, Inventory Control, Mrp, Tqm, Business Organization, Forms Of Ownership, Hrp, Factory Legislation, Sales Management, Forecasting Accounting, Budgetary Control, Project Management (Pert/Cpm), Break-Even Analysis, Or, Engineering Economy, Oplimisation Analysis, E-Commerce, Quality Management Of Physical Resources.
