Physics 904: Parallel Circuits | Georgia Public Broadcasting In a parallel circuit, if a lamp breaks or a component is disconnected from one parallel wire, the components on different branches keep working. And, unlike a series circuit, the lamps stay bright... Series and parallel circuits - Series and parallel ... Charge does NOT become used up by resistors in such a manner that there is less current at one location compared to another. In a parallel circuit, charge divides up into separate branches such that there can be more current in one branch than there is in another. Nonetheless, when taken as a whole, the total amount of current in all the branches when added together is the same as the amount of current at locations outside the branches. Physics Tutorial: Parallel Circuits Physics Fundamentals Parallel Circuit Episode 904 Answer Physics Tutorial: Parallel Circuits Remember that in a parallel circuit: the current in the branches of the circuit (is the same, adds up). the voltage drops across each branch (is the same, adds up to) the total voltage.
