"In this collection of 14 speculative short stories, author A.A. Garrison takes us to Ford, North Carolina, a sleepy little mountain town named after a Civil War deserter. Though out of the way, the town seems to attract an immoderate share of the fantastic and the macabre."--Lulu.com.  
Welcome to Ford Haynes Manuals  
Formula 1, the worlds most popular motor

sport, from a totally new perspective ?  
Hidden in workshops around the world lie forgotten and abandoned machines ?  
unfulfilled. These purpose built cars have never started a race, never felt the excitement of a grand prix. Yet they define an era of Formula One, changing the landscape. Unraced tell the stories of nine grand prix cars that never started. An exciting and fresh look at F1 from the Author of Autodrome. The Unraced are largely forgotten or overlooked but the stories they have to tell reveal more about the sport than any championship winner, and or the first time these stories are told

in a refreshing style, backed up with 150 photos, many never published before. The book covers Honda RC100/RC1.5x (1993-1995), Lola T95/30 (1995), DAMS GD-01 (1995), Honda RC2x (1995-1996), Dome F105 (1996), Lola T97/30 (1997), Honda RA099 (1999), Premier1 prototype (2001), McLaren MP4/18 (2003) and also includes a listing of all F1 projects (raced & unraced) from 1995 ? 2005. This book is completely incomparable and a must have for any motor sport enthusiast.

By the early 1960s, the Ford Motor Company, built to bring automobile transportation to the masses, was falling behind. Young Henry Ford II, who had taken the reins of his grandfather's company with little business experience to speak of, knew he had to do something to shake things up. Baby boomers were taking to the road in droves, looking for speed not safety, style not comfort. Meanwhile, Enzo Ferrari, whose cars epitomized style, lorded it over the European racing scene. He crafted beautiful sports cars, "science fiction on wheels," but was also called "the Assassin"

because so many drivers perished while racing them. Go Like Hell tells the remarkable story of how Henry Ford II, with the help of a young visionary named Lee Iacocca and a former racing champion turned engineer, Carroll Shelby, concocted a scheme to reinvent the Ford company. They would enter the high-stakes world of European car racing, where an adventurous few threw safety and sanity to the wind. They would design, build, and race a car that could beat Ferrari at his own game at the most prestigious and brutal race in the world, something no American car had ever done. Go Like Hell transports readers to a risk-filled, glorious time in this brilliant portrait of a rivalry between two industrialists, the cars they built, and the "pilots" who would drive them to victory, or doom.

The internal combustion engine was invented around 1790 by various scientists and engineers worldwide. Since then the engines have gone through many modifications and improvements. Today,

different applications of engines form a significant technological importance in our everyday lives, leading to the evolution of our modern civilization. The invention of diesel and gasoline engines has definitely changed our lifestyles as well as shaped our priorities. The current engines serve innumerable applications in various types of transportation, in harsh environments, in construction, in diverse industries, and also as back-up power supply systems for hospitals, security departments, and other institutions. However, heavy duty or light duty engines have certain major disadvantages, which are well known to everyone. With the increasing usage of diesel and gasoline engines, and the constantly rising number of vehicles worldwide, the main concern nowadays is engine exhaust emissions. This book looks at basic phenomena related to diesel and gasoline engines, combustion, alternative fuels, exhaust emissions, and mitigations.

Out of print for twenty years, a new edition of Jim Clark 'Tribute to a Champion' by Eric Dymock will be published in the spring. Lightly edited and completely redesigned in colour throughout, this

eagerly sought classic of motor racing celebrates the life and achievements of Jim Clark (1936-1968), World Champion 1963 and 1965. In the new book, Eric Dymock details his place in motor racing history and total command of Formula 1, portraying him as an individual, nail-biting and insecure, yet the greatest driver in any sort of motor sport. From a Scottish farming family Clark rewrote the annals of American racing at Indianapolis, coming second at his first attempt in 1963, winning in 1965. He seemed a match for any odds during eight dangerous years at the top of motor racing, yet died in an unlikely accident at a minor event at Hockenheim on April 7th 1968. Genius at the wheel was not enough. Rivals' subsequent safety campaigns saved countless lives on and off the track. Eric Dymock observed Clark from before he ever sat in a racing car, covering his professional career as member of The Motor magazine staff from 1962, and then as specialist motor racing correspondent from 1966. This book has photographs of Jim Clark's birthplace, home, memorabilia and archive material from the Jim Clark Room at Duns. The measured analysis

throws light on the tense mood of Formula 1 in the hazardous 1960s when Clark narrowly missed four consecutive world titles. Misfortune in the closing laps of the final race of the season twice denied him a unique quartet. Some of his other records remain secure however. Clark's eight "grand slams" (pole position, leading every lap, fastest lap and winning a Grand Prix - his closest rivals Alberto Ascari and Michael Schumacher managed only five) is unlikely to be matched. The new edition will go on sale in the spring at regular bookshop prices for a new generation of Formula 1 fans, as the 50th anniversary of Clark's accident approaches.
