Commercial Management: theory and practice defines the role of commercial management within project-oriented organisations, providing a framework for and helping to develop a critical understanding of the factors that influence commercial management practice. It also identifies generic aspects of this practice and provides a theoretical foundation to these activities, by reference to existing and emergent theories and concepts, as well as to relevant management best practice. The book is

structured into four parts: Part 1 Introduction - Commercial Management in Project Environments explores the nature of commercial practice within project-oriented organisations at the buyer-seller interface. It presents a Commercial Management framework, which illustrates the multiple interactions and connections between the purchaser's procurement cycle and a supplier's bidding and implementation cycles. Additionally, it outlines the principle activities undertaken by the commercial function, identifies the skills and abilities that support these activities and reviews the theories and concepts that underpin commercial practice. Finally, it identifies areas of commonality of practice with other functions found within project-oriented organisations, plus sources of potential conflict and misunderstanding. Part 2 - Elements of Commercial Theory and Practice covers commercial leadership; exploring strategy; risk and uncertainty management; financial decision-making; and key legal issues. Part 3 - Approaches to Commercial Practice addresses best practice management; and commercial and contracting strategies and tactics. Finally, Part 4 - Case Studies offers two extended case studies: Football Stadia (the Millennium Stadium, Cardiff; the Emirates Stadium, Islington; and Wembley Stadium, London); and Heathrow Terminal 5. The book provides a one-stop-shop to the many topics that underpin commercial management practice from both a demand (buy-side) and a supply (sell-side) perspective. It will help develop an understanding of the issues influencing commercial management: leadership, strategy, risk, financial, legal, best practice management and commercial and contracting strategy and tactics. Despite significant financial investments, the rate of development and pace of poverty reduction in developing and transitional countries has not always matched expectations. Development management typically involves complex interactions between governmental and non-governmental organisations, donors and members of the public, and can be difficult to navigate. This volume brings together a group of international contributors to explore the theoretical and empirical underpinnings of development management, and to consider the prospects and challenges associated with it in the context of both developing and transitional countries. Referring to dominant norms and values in public and developmental organisations, development management is tied up with the attitudes and perceptions of various stakeholders including: government officials, public sector managers, aid workers, donors and members of the public. Attempting to make sense of complex interactions between these actors is highly problematic and calls for new approaches, models and insights. Based on cutting-edge research, the chapters challenge much of the previous discourse on the subject and evaluate the challenges and opportunities that it presents. Development Management offers academics, researchers and practitioners of public administration, business and management, international development and political science a comprehensive and state-of-the-art review of current research on development management in the context of developing and transitional countries.
