Say Nothing Simon and Schuster

They tell me that my memory will never be the same, that I'll start forgetting things. At first just a little, and then a lot. So I'm writing to remember. Sammie McCoy is a girl with a plan: graduate at the top of her class and get out of her small town as soon as possible. Nothing will stand in her way--not even the rare

genetic disorder the doctors say will slowly steal her memories and then her health. So the memory book is born: a journal written to Sammie's future self, so she can remember everything from where she stashed her study guides to just how great it feels to have a best friend again. It's where she'll record every perfect detail of her first date with longtime-crush Stuart, a gifted young writer home for the summer. And where she'll admit how much she's missed her childhood friend Cooper, and the ridiculous lengths he will go to make her laugh. The memory book will ensure Sammie never forgets the most important parts of her life--the people who have broken her heart, those who have mended it--and most of all, that if she's going to die, she's going to die living. This moving and remarkable novel introduces an inspiring character you're sure to remember, long after the last page.

Breath, Eyes, Memory Poppy

A fascinating exploration of the intricacies of how we remember, why we forget, and what we can do to protect our memories, from the Harvard-trained neuroscientist and bestselling author of *Still Alice*. Have you ever felt a crushing wave of panic when you can't remember the name of that actor in the movie you saw last week, or when you walk into a room only to forget why you went there in the first place? If you're over forty, you're probably not laughing. You might even be worried that these lapses in memory could be an early sign of Alzheimer's or dementia. In reality, for the vast majority of us, these examples of forgetting are completely normal. Why? Because while memory is amazing, it is far from perfect. Our brains aren't designed to remember every name we hear, plan we make, or day we experience. Just because your memory sometimes fails doesn't mean it's broken or succumbing to disease. Forgetting is actually part of being human. In *Remember*, neuroscientist and acclaimed novelist Lisa Genova delves into how memories are made and how we retrieve them. You'll come to appreciate the clear distinction between normal forgetting (where you parked your car) and forgetting due to Alzheimer's (that you own a car). And you'll see how memory is profoundly impacted by meaning, emotion, sleep, stress, and context. Once you understand the language of memory and how it functions, its incredible strengths and maddening weaknesses, its natural vulnerabilities and potential superpowers, you can both vastly improve your ability to remember and feel less rattled when you inevitably forget. You don't have to fear your memory anymore. And that can be life-changing. Praise for *Remember*: 'Using her expertise as a neuroscientist and her gifts as a storyteller, Genova explains the nuances of human memory. As with her previous books, this is an engaging and edifying read.' Steven Pinker, Johnstone Professor of Psychology, Harvard University, author of *How the Mind Works* 'No one writes more brilliantly about the connections between the brain, the mind, and the heart. *Remember* is a beautiful, fascinating, and important book about the mysteries of human memory--what it is, how it works, and what happens when it is stolen from us. A scientific and literary treat that you will not soon forget.' Daniel Gilbert, Edgar Pierce Professor of Psychology, Harvard University, New York Times bestselling author of *Stumbling on Happiness* 'In *Remember*, Lisa Genova provides easy-to-follow, no nonsense advice on how to maximize one of the greatest outputs of your brain--memory. But, more important, she also lets us know that

while memory is a tremendous gift, the real you is much more than just what you can remember!' Rudolph E. Tanzi, PhD, professor of neurology, Harvard Medical School, coauthor of *The Healing Self* 'Neuroscientist and novelist Genova (*Still Alice*) delivers a solid primer on the way memory works and fails to work...Genova blends popular science and self-help, providing lay reader-friendly descriptions of the function of memory and sharing tips for better memory in a helpful appendix ...This accessible survey is an easy entry point for anyone wondering how and why they keep forgetting where they left their car keys.' Growing Up Delacorte Press

Finalist for the International Booker Prize and the National Book Award A haunting Orwellian novel about the terrors of state surveillance, from the acclaimed author of *The Housekeeper and the Professor*. On an unnamed island, objects are disappearing: first hats, then ribbons, birds, roses. . . . Most of the inhabitants are oblivious to these changes, while those few able to recall the lost objects live in fear of the draconian Memory Police, who are committed to ensuring that what has disappeared remains forgotten. When a young writer discovers that her editor is in danger, she concocts a plan to hide him beneath her floorboards, and together they cling to her writing as the last way of preserving the past. Powerful and provocative, *The Memory Police* is a stunning novel about the trauma of loss. A novelist and a neuroscientist uncover the secrets of human memory. What makes us remember? Why do we forget? And what, exactly, is a memory? With playfulness and intelligence, *Adventures in Memory* answers these questions and more, offering an illuminating look at one of our most fascinating faculties. The authors—two Norwegian sisters, one a neuropsychologist and the other an acclaimed writer—skillfully interweave history, research, and exceptional personal stories, taking readers on a captivating exploration of the evolving understanding of the science of memory from the Renaissance discovery of the hippocampus—named after the seahorse it resembles—up to the present day. Mixing metaphor with meta-analysis, they embark on an incredible journey: “diving for seahorses” for a memory experiment in Oslo fjord, racing taxis through London, and “time-traveling” to the future to reveal thought-provoking insights into remembering and forgetting. Along the way they interview experts of all stripes, from the world's top neuroscientists to famous novelists, to help explain how memory works, why it sometimes fails, and what we can do to improve it. Filled with cutting-edge research and nimble storytelling, the result is a charming—and memorable—adventure through human memory.
