This report analyzes the economics of alternative microirrigation technologies ranging from low-cost drip and sprinkler systems to the capital-intensive systems, the determinants of adoption of microirrigation technology, the poverty outreach of the different microirrigation systems, and the sustainability implications of microirrigation adoption.
Bacillus thuringiensis and Lysinibacillus sphaericus Royal Society of Chemistry
This compendium of 29 chapters from 18 countries contains both fundamental and advanced insight into the inevitable shift from cities dominated by the fossil-fuel systems of the industrial age to a renewable-energy based urban development framework. The cross-disciplinary handbook covers a range of diverse yet relevant topics, including: carbon emissions policy and practice; the role of embodied energy; urban thermal performance planning; building efficiency

services; energy poverty alleviation efforts; renewable community support networks; aspects of household level bio-fuel markets; urban renewable energy legislation, programs and incentives; innovations in individual transport systems; global urban mobility trends; implications of intelligent energy networks and distributed energy supply and storage; and the case for new regional monetary systems and lifestyles. Presented are practical and principled aspects of technology, economics, design, culture and society, presenting perspectives that are both local and international in scope and relevance.
InfoWorld Intl Food Policy Res Inst
This book analyzes extensive data on the world's rapidly changing and growing access to, use and geographies of information and communications technologies. It studies not only the spatial differences in technology usage worldwide, but also examines digital differences in the major world nations of China, India, the United States and Japan at the state and provincial levels. At the global level, factors such as education,

innovation, judicial independence and investment are important to explaining differences in the adoption and use of technology. The country studies corroborate consistent determinants for technology usage for education, urban location, economic prosperity, and infrastructure, but also reveal unique determinants, such as social capital in the United States and India, exports in China and working age population and patents in Japan. Spatial patterns are revealed that indicate clusters of high and low technology use for various nations around the world, the countries of Africa and for individual states/provinces within nations. Based on theory, novel findings and phenomena that have remained largely unreported, the book considers the future of the worldwide digital divides, the policy role of governments and the challenges of leadership.

Conference Record ... Annual Workshop on Microprogramming MIT Press

The book is a collection of high-quality research papers presented at 7th International Conference on Internet of

Things and Connected Technologies (ICIoTCT 2022), held at Indian Institute of Technology (IIT) Patna, Bihar, India during 29-30 September 2022. This book presents recent advances on IoT and connected technologies. This book is designed for marketing managers, business professionals, researchers, academicians, and graduate-level students seeking to learn how IoT and connecting technologies increase the amount of data gained through devices, enhance customer experience, and widen the scope of IoT analytics in enhancing customer marketing outcomes.

MICROCOMPUTING

International Monetary Fund

This volume presents a comprehensive perspective of the biopesticides *Bacillus thuringiensis* and *Lysinibacillus sphaericus*, from their basic biology to agriculture, forestry and public-health applications. It covers their ecology, virulence factors, and genetic characterization. The topics related to agriculture and forestry include mode of action, receptors of insect pests, and heterologous expression of toxins in insect cells and plants. Public-health researchers will find information on vector control programs with an emphasis on the Neotropical region. The book also discusses new products and the global market.

MICRO-FACTS

Springer Nature

Teleports represent the pinnacle of telecommunications development throughout the world. They are based on technologies (such as the telephone) which have become indispensable to daily life. But the pace of progress in this field is increasing rapidly. It has therefore become necessary to analyze current developments, and look to the future. This book presents discussions and analyses on almost all aspects of Teleports, ranging from the economic and legal considerations, to site development and the variety of services that can be offered. The final section of the book looks at the practice of operating Teleports in various countries around the world.

Plant Sciences Reviews 2010 Elsevier

Meeting future food needs without compromising environmental integrity is a central challenge for agriculture globally but especially for the Asia Pacific region - where 60% of the global population, including some of the world's poorest, live on only 30% of the land mass. To guarantee the food security of this and other regions, growers worldwide are rapidly adopting genetically modified (GM)

crops as the forerunner to protect against many biotic and abiotic stresses. Asia Pacific countries play an important role in this, with India, China and Pakistan appearing in the top 10 countries with acreage of GM crops, primarily devoted to Bt cotton. *Genetically Modified Crops in Asia Pacific* discusses the progress of GM crop adoption across the Asia Pacific region over the past two decades, including research, development, adoption and sustainability, as well as the cultivation of insect resistant Bt brinjal, drought-tolerant sugarcane, late blight resistant potato and biotech rice more specific to this region. Regulatory efforts of the Asia Pacific member nations to ensure the safety of GM crops to both humans and the environment are also outlined to provide impetus in other countries initiating biotech crops. The authors also probe into some aspects of gene editing and nanobiotechnology to expand the scope into next generation GM crops, including the potential to grow crops in acidic soil, reduce methane production, remove poisonous elements from plants and improve overall nutritional quality. *Genetically Modified Crops in Asia Pacific* provides a comprehensive reference not only for academics, researchers and private sectors in crop systems but also policy makers in the Asia Pacific region. Beyond this region, readers will benefit from understanding how GM crops have been integrated into many different countries and, in particular, the effects of the take-up of GM cropping systems by farmers with different socioeconomic backgrounds.

Springer

"Plant Sciences Reviews 2010" provides scientists and students in the field with timely analysis on key topics in current research. Originally published online in "CAB Reviews," this volume makes available in printed form the reviews in plant sciences published during 2010.

Performance Analysis of Parallel Applications for HPC John Wiley & Sons InfoWorld is targeted to Senior IT professionals. Content is segmented into Channels and Topic Centers. InfoWorld also celebrates people, companies, and projects.

Monthly Catalogue, United States Public Documents CRC Press

This report summarises the knowledge on plastics in Nordic marine species. Nordic biota interacts with plastic pollution, through entanglement and ingestion. Ingestion has been found in many seabirds and also in stranded mammals. Ingestion of plastics has been documented in 14 fish

species, which many of them are of ecology and commercial importance. Microplastics have also been found in blue mussels and preliminary studies found synthetic fibres in marine worms. Comparability between and within studies of plastic ingestion by biota from the Nordic environment and other regions are difficult as there are: few studies and different methods are used. It is important that research is directed towards the knowledge gaps highlighted in this report, to get a better understanding on plastic ingestion and impact on biota from the Nordic marine environment.

Monthly Catalog of United States Government Publications Elsevier

The safeguarding of authentic facts is essential, especially in this disruptive Orwellian age, where digital technologies have opened the door to a post-truth world in which "alternative facts" can be so easily accepted as valid. And because facts matter, evidence matters. In this urgent manifesto, archives luminary Millar makes the case that authentic and accurate records, archives, data, and other sources of documentary proof are crucial in supporting and fostering a society that is respectful, democratic, and self-aware. An eye-opening treatise for the general public, an invaluable resource for archives students, and a provocative call-to-arms for information and records professionals, Millar's book explains the concept of evidence and discusses the ways in which records, archives, and data are not just useful tools for our daily existence but also essential sources of evidence both today and in the future; includes plentiful examples that illustrate the critical role evidence plays in upholding rights, enforcing responsibilities, tracing family or community stories, and capturing and sharing memories; and examines the impact of digital technologies on how records and information are created and used. With documentary examples ranging from Mesopotamian clay tablets to World War II photographs to today's Twitter messages and Facebook posts, Millar's stirring book will encourage readers to understand more fully the importance of their own records and archives, for themselves and for future generations.

INFORMATION TECHNOLOGY & FINANCIAL SERVICES

Springer Nature

Information Technology and Financial Services offers a thorough examination of the benefits that can be gained from the application of the new technologies to banking.

ELECTRO-ACTIVE MATERIALS AND SUSTAINABLE GROWTH

Springer Science & Business Media

This handbook is conceived as a comprehensive history of the North Germanic languages from the oldest times up to the present day. Whereas most of the traditional presentations of Nordic language history are confined to individual languages and often concentrate on purely linguistic data, the present work covers the history of all Nordic languages in its totality, embedded in a broad culture-historical context. The Nordic languages are described both individually and in their mutual dependence as well as in relation to the neighboring non-Nordic languages. The handbook is not tied to a particular methodology, but keeps in principle to a pronounced methodological pluralism, encompassing all aspects of actual methodology. Moreover it combines diachronic with synchronic-systematic aspects, longitudinal sections with cross-sections (periods such as Old Norse, transition from Old Norse to Early Modern Nordic, Early Modern Nordic 1550-1800 and so on). The description of Nordic language history is built upon a comprehensive collection of linguistic data; it consists of more than 200 articles, written by a multitude of authors from Scandinavian and German and English speaking countries. The organization of the handbook combines a central part on the detailed chronological developments and some chapters of a more general character: chapters on theory and methodology in the beginning, and on overlapping spatio-temporal topics in the end. Key features: complete and comprehensive study of the Nordic languages all Nordic languages are treated individually and in their mutual dependence international handbook series two volumes offering the current state of research

Fact Book of U.S. Agriculture Walter de Gruyter

This book presents an innovative methodology to fabricate nanostructured piezoelectric composite fibers with wearable technologies application as an energy generator and/or sensors. It reports on methods of piezoelectric fiber formation and development of novel textile structures (weave, knit, braid, coil) with embedded electrodes. The flexibility and small diameter of the final fiber make it possible to use them in garment without affecting structure of comfort. The performance of the fiber generators was evaluated through different applications such as air and water sensor, health and

movement monitoring, and energy generator. The book targets a wide readership including materials scientists, electrical engineering, soft robotics, Internet of things, electronic textiles, and wearable technology.

For more than 20 years, Network World has been the premier provider of information, intelligence and insight for network and IT executives responsible for the digital nervous systems of large organizations. Readers are responsible for designing, implementing and managing the voice, data and video systems their companies use to support everything from business critical applications to employee collaboration and electronic commerce.

The Nordic Languages. Volume 1 CRC Press

This two volume set reviews the key issues in processing and characterization of nanoscale ferroelectrics and multiferroics, and provides a comprehensive description of their properties, with an emphasis in differentiating size effects of extrinsic ones like boundary or interface effects. Recently described nanoscale novel phenomena are also addressed. Organized into three parts it addresses key issues in processing (nanostructuring), characterization (of the nanostructured materials) and nanoscale effects. Taking full advantage of the synergies between nanoscale ferroelectrics and multiferroics, the text covers materials nanostructured at all levels, from ceramic technologies like ferroelectric nanopowders, bulk nanostructured ceramics and thick films, and magnetoelectric nanocomposites, to thin films, either polycrystalline layer heterostructures or epitaxial systems, and to nanoscale free standing objects with specific geometries, such as nanowires and tubes at different levels of development. This set is developed from the high level European scientific knowledge platform built within the COST (European Cooperation in Science and Technology) Action on Single and multiphase ferroics and multiferroics with restricted geometries (SIMUFER, ref. MP0904). Chapter contributors have been carefully selected, and have all made major contributions to knowledge of the respective topics, and overall, they are among most respected scientists in the field.

Journal of the National Cancer Institute Springer Nature

Micro-Facts has proved to be a useful ready reference for practising food

microbiologists and others concerned with ensuring the microbiological safety of foods. Micro-Facts 6th Edition is an invaluable tool for food microbiologists everywhere, as a source book of information relevant to the prevention of food-poisoning hazards worldwide.

Nanoscale Ferroelectrics and Multiferroics Routledge

South Asia constitutes a key geography in the world today considering its large population and related daunting energy and environmental challenges. Many countries in the region are faced with a growing gap between energy demand and local resources, resulting in an increased dependence on imports. According to the International Energy Agency (IEA), the energy demand in South Asia will grow at a rate more than double that of the world average in the coming decades. This book addresses the critical subject of energy and environmental outlook for South Asia and presents the wider challenges and the responses at the national and regional level. Features: Discusses and addresses the ongoing energy and environmental challenges faced by almost a quarter of the global population Includes dedicated chapters for each country and presents analysis and recommendations by regional experts Examines how deteriorating air quality and persistent natural disasters are severe environmental challenges for the region Discusses the implications of global warming and climate change for South Asia Includes practical case studies throughout Energy and Environmental Outlook for South Asia will benefit a wide range of stakeholders from various fields including but not limited to energy, environment, economics, national security, and sustainable development. It also serves as a valuable resource for academics, researchers, analysts, policymakers, and representatives of utilities, industry, professional bodies, financial institutions, think tanks, and developmental organizations to better plan their initiatives, activities, and policies. It will help countries in the region and also those around the world by learning from shared experience, and ideally by collaborating for energy and environmental prosperity.

Internet of Things (IoT): Key Digital Trends Shaping the Future Routledge

Proponents of the concept of ecological integrity argue that it is a necessary component of global governance on which the sustainable future of the planet and its inhabitants depends. This book presents the latest research and current thinking on the role of ecological integrity in support of life on Earth and the importance of

governance for the common good, or the benefit of all. The book considers whether present forms of governance support the common good, or whether they are endangering its very foundations. It explores the connection between consumerism and capitalism, the destruction of natural resources and with it, the elimination of many of the

ecosystem services that support life in general, and human life in particular. Chapters focus on the defence of human rights, and in particular the rights to key resources such as food, water and general health/wellbeing, as well as energy and security. Topics covered include climate change, biodiversity, migration and conflict resolution, with approaches from various perspectives such as politics,

ethics, sociology and law. Overall the book provides a stimulating insight into the multifaceted debates surrounding ecological integrity, global governance and sustainability.
