THE GENIUS OF ARAB CIVILIZATION

Abjad Book Designers & Builders

This volume, the first of six to be published, studies fundamental values of Islam, along with the nature of rights and the responsibilities in a general context. The authors analyse the development of social thought and morality in Islam, and ways in which they are enforced through the family and education. Particular attention is paid to the status of women, children, youth and the socially excluded. Several chapters broach specially Islamic approaches to economics, government and justice. A world religion since its inception in the seventh century A.D., Islam is today seeking vigorous answers to contemporary problems through its multi-faceted history. Issues of poverty and wealth, inequality and demands for political expression, and respect for diversity in a difficult world of conformity are dealt with in this series. The study is organized along thematic rather than chronological lines and thus it is not necessary to read the volumes in order. Volume II is in fact the first to have been published. Volume IV is forthcoming end 2002, volume V mid 2003 and volumes III and VI in 2004. Drawing on startling new evidence from the mapping of the genome, an explosive new account of the genetic basis of race and its role in the human story Fewer ideas have been more toxic or harmful than the idea of the biological reality of race, and with it the idea that humans of different races are biologically different from one another. For this understandable reason, the idea has been banished from polite academic conversation. Arguing that race is more than just a social construct can get a scholar run out of town, or at least off campus, on a rail. Human evolution, the consensus view insists, ended in prehistory. Inconveniently, as Nicholas Wade argues in *A Troublesome Inheritance*, the consensus view cannot be right. And in fact, we know that populations have changed in the past few thousand years—to be lactose tolerant, for example, and to survive at high altitudes. Race is not a bright-line distinction; by definition it means that the more human populations are kept apart, the more they evolve their own distinct traits under the selective

pressure known as Darwinian evolution. For many thousands of years, most human populations stayed where they were and grew distinct, not just in outward appearance but in deeper senses as well. Wade, the longtime journalist covering genetic advances for The New York Times, draws widely on the work of scientists who have made crucial breakthroughs in establishing the reality of recent human evolution. The most provocative claims in this book involve the genetic basis of human social habits. What we might call middle-class social traits—thrift, docility, nonviolence—have been slowly but surely inculcated genetically within agrarian societies, Wade argues. These “values” obviously had a strong cultural component, but Wade points to evidence that agrarian societies evolved away from hunter-gatherer societies in some crucial respects. Also controversial are his findings regarding the genetic basis of traits we associate with intelligence, such as literacy and numeracy, in certain ethnic populations, including the Chinese and Ashkenazi Jews. Wade believes deeply in the fundamental equality of all human peoples. He also believes that science is best served by pursuing the truth without fear, and if his mission to arrive at a coherent summa of what the new genetic science does and does not tell us about race and human history leads straight into a minefield, then so be it. This will not be the last word on the subject, but it will begin a powerful and overdue conversation.

Puffin Books

Modern Art in the Arab World is a compendium of critical art writings by twentieth-century Arab intellectuals and

artists that explore the formation of a global modernism through debates on originality, public space, spiritualism and art, postcolonial exhibition politics, and Arab nationalism, among many other topics.

THE BLACK MAN: THE FATHER OF CIVILIZATION PROVEN BY BIBLICAL HISTORY

MIT Press (MA)

"Imagine it is the seventh century. As most of Europe continues its descent into a long period of intellectually dormancy, a quiet yet powerful academic revolution is erupting in another corner of the world. Over the next centuries, the geniuses of Muslim society will thrust the boundaries of knowledge forward to such a degree that their innovations still shape civilizations to this day. The staggering achievements of these men and women influenced the development of modern mathematics, science, engineering, and medicine. 1001 Inventions: The Enduring Legacy of Muslim Civilization sheds new light on this golden era that was once lost to so many, and celebrates the heritage that we all share"--P. jewel of “the Gardens,” a cloistered community in New York’s Greenwich Village. The neighborhood is a bubble within a bubble, and the residents are immediately intrigued by the eccentric newcomer and his family. Along with his improbable name, untraceable accent, and unmistakable whiff of danger, Nero Golden has brought along his three adult sons: agoraphobic, alcoholic Petya, a brilliant recluse with a tortured mind; Apu, the flamboyant artist, sexually and spiritually omnivorous, famous on twenty blocks; and D, at twenty-two the baby of the family, harboring an explosive secret even from himself. There is no mother, no wife; at least not until Vasilisa, a sleek Russian expat, snags the septuagenarian Nero, becoming the queen to his king—a queen in want of an heir. Our guide to the Golden’s world is their neighbor René, an ambitious young filmmaker. Researching a movie about the Golden’s, he ingratiates himself into their household. Seduced by their mystique, he is inevitably implicated in their quarrels, their infidelities, and, indeed, their crimes. Meanwhile, like a bad joke, a certain comic-book villain embarks upon a crass presidential run that turns New York upside-down. Set against the strange and exuberant backdrop of current American culture and politics, *The Golden House* also marks Salman Rushdie’s triumphant and exciting return to realism. The result is a modern epic of love and terrorism, loss and reinvention—a powerful, timely story told with the daring and panache that make Salman Rushdie a force of light in our dark new age. The operation of schools in the Arab world is a topic about which very little is known in the West. This volume, first published in 1991, provides information about the Arab school and thus contributes to an understanding of what is taught, by whom, and under what conditions. It seeks to define the interaction between traditional elements and innovative forces impinging on the Arab school, as well as reviewing policies that concern the education of Arab children. It is maintained that Arab

schools are in a state of transition, reproducing society and its norms on one hand while on the other operating as agents seeking to transform society. This work examines this claim in detail, providing a unique discussion about education in the Arab world.

Ibn Khaldun Adam Publishers

The definitive account of the life and thought of the medieval Arab genius who wrote the Muqaddima Ibn Khaldun (1332–1406) is generally regarded as the greatest intellectual ever to have appeared in the Arab world—a genius who ranks as one of the world's great minds. Yet the author of the Muqaddima, the most important study of history ever produced in the Islamic world, is not as well known as he should be, and his ideas are widely misunderstood. In this groundbreaking intellectual biography, Robert Irwin provides an engaging and authoritative account of Ibn Khaldun's extraordinary life, times, writings, and ideas.

Vol. 2: Published for the first time in English alphabetical order, vol. 2 (of the 5 original volumes) of "Canon of Medicine" (Law of Natural Healing), is an essential addition to the history of medicine as it holds a treasure of information on natural pharmaceuticals used for over 1000 years to heal various diseases and disorders. Fully color illustrated with a 150 page, 7000 word index of the healing properties of each of the entries, the text itself is an alphabetical listing of the natural pharmaceuticals of the simple compounds. By simple compounds, Avicenna includes the individual plants, herbs, animals and minerals that have

healing properties. Avicenna lists 800 tested natural pharmaceuticals including plant, animal and mineral substances. The compiler has included the Latin, Persian and Arabic names of the drugs along with artistic renderings of the drugs as illustrations as well as Avicenna's Tables or Grid for each entry that describes the individual, specific qualities of simple drugs.

In Odessa, the greatest port on the Black Sea, a dream of cosmopolitan freedom inspired geniuses and innovators, from the writers Alexander Pushkin and Isaac Babel to Zionist activist Vladimir Jabotinsky and immunologist Ilya Mechnikov. Yet here too was death on a staggering scale, as World War II brought the mass murder of Jews carried out by the city's Romanian occupiers. Odessa is an elegy for the vibrant, multicultural tapestry of which a thriving Jewish population formed an essential part, as well as a celebration of the survival of Odessa's dream in a diaspora reaching all the way to Brighton Beach.

skilled in geometry, ingenious devices (!lival), music and astronomy. According to Ibn al-Nad!m and Ibn Khallikān their weakest subject was astronomy, but this seems to conflict with the opinions of Ibn Yunus and al-Birun!, both good judges, who spoke highly of the accuracy of the Banu Musa's astronomical observations. Muḥammad, who was the most influential of the brothers, specialised in geometry and astronomy, and excelled Al-Ḥaḍramī in all the sciences except in the construction of ingenious devices. Al-Ḥaḍramī was a brilliant geometrician with a retentive memory and great powers of deduction. A rival once tried to discredit him in front of al-Ma'mun by saying that al-Ḥaḍramī had read only six of the thirteen books of Euclid's Elements. Al-Ḥaḍramī replied by saying that it was unnecessary for him to read the remainder because he could arrive at the answers to any of Euclid's problems by deduction. Al-Ma'mun acknowledged al-Ḥaḍramī's skill, but did not excuse him, saying: "laziness has prevented you from reading the whole of it—it is to geometry as the letters a, b, t, 111 are to speech and writing." (H. 264). Al-Ḥaḍramī is rarely mentioned by name elsewhere in the sources and may have preferred to devote his time to scholarship, whereas his brothers were involved in a variety of undertakings. At the time of their entry into the House of Wisdom the Banu Muḥammad were poor and needy (H.

John Hobson claims that throughout its history most international theory has been embedded within various forms of

Eurocentrism. Rather than producing value-free and universalist theories of inter-state relations, international theory instead provides provincial analyses that celebrate and defend Western civilization as the subject of, and ideal normative referent in, world politics. Hobson also provides a sympathetic critique of Edward Said's conceptions of Eurocentrism and Orientalism, revealing how Eurocentrism takes different forms, which can be imperialist or anti-imperialist, and showing how these have played out in international theory since 1760. The book thus speaks to scholars of international relations and also to all those interested in understanding Eurocentrism in the disciplines of political science/political theory, political economy/international political economy, geography, cultural and literary studies, sociology and, not least, anthropology.

The Middle Ages were a period of tremendous cultural and scientific advancement in the Islamic Empire—ideas and inventions that shaped our world. Did you know that: • The numbers you use every day (Arabic numerals!) are a Muslim invention? • The marching band you hear at football games has its roots in the Middle East? • You are drinking orange juice at breakfast today thanks to Islamic farming innovations? • The modern city's skyline was made possible by Islamic architecture? The Muslim world has often been a bridge between East and West, but many of Islam's crucial innovations are hidden within the folds of history. In this important book, Bryn Barnard uses short, engaging text and gorgeous full-color artwork to bring Islam's contributions gloriously to life. Chockful of information and pictures, and eminently browsable, *The Genius of*

Islam is the definitive guide to a fascinating topic.

A Radical Re-Vision of Capitalism

Yale University Press

The Western narrative of world history largely omits a whole civilization.

Destiny Disrupted tells the history of the world from the Islamic point of view, and restores the centrality of the Muslim perspective, ignored for a thousand years. In *Destiny Disrupted*, Tamim Ansary tells the rich story of world history as it looks from a new perspective: with the evolution of the Muslim community at the center. His story moves from the lifetime of Mohammed through a succession of far-flung empires, to the tangle of modern conflicts that culminated in the events of 9/11. He introduces the key people, events, ideas, legends, religious disputes, and turning points of world history, imparting not only what happened but how it is understood from the Muslim perspective. He clarifies why two great civilizations—Western and Muslim—grew up oblivious to each other, what happened when they intersected, and how the Islamic world was affected by its slow recognition that Europe—a place it long perceived as primitive—had somehow hijacked destiny. With storytelling brio, humor, and evenhanded sympathy to all sides of the story, Ansary illuminates a fascinating parallel to the world narrative usually heard in the West. *Destiny Disrupted* offers a vital perspective on world conflicts many now find so puzzling.

Destiny Disrupted W. W. Norton & Company

This study illustrates why the language of the Qur'an is miraculous, unique, and evidence of divine authority. The author compares the language of the Qur'an with the language of pre-Islamic poetry,

the Prophet's words (hadith), and the language of the Arabs both past and present, to demonstrate that although the Qur'an was revealed in Arabic it was at the same time an Arabic which was entirely new. Original and early Muslim audiences viewed this as miraculous and responded to the Qur'an's words, sounds, rhythms, etc. in a manner consistent with a deeper appreciation of its beauty and majesty which modern ears, trained by familiarity, and despite being surrounded by all manner of dictionaries and studies, are at a loss to capture. The author attempts to remove this veil and present the Qur'an to readers as if hearing it for the first time, to bring to life some of this wonder. In doing so he guides readers to appreciate the beauty of the Qur'an, to become more immersed in it, and to have a clearer understanding of its structure and flow. Devoting special attention to Surah Al Muddaththir, to underpin his analysis, Saeh thus brings the Revelation to life, to demonstrate that each surah has distinct features and characteristics that make it stand out uniquely within the design and sweep of the whole.

Is global capitalism on its last legs? Is the era of American leadership over? Has the West begun a decline into a new Dark Age? Does American civilization deserve to survive? These are the unnerving questions raised by the Great Crash of 2009. This book presents a radically new answer, insisting that global society has only begun to realize its full potential. Author Howard Bloom argues that there's a hidden mandate beneath the surface of capitalism: "It's struggling to whisper and rumble its message to you and me. That hidden imperative can lift us from economic crisis, can make us a leader in the next-generation economy, and can dramatically upgrade our ability to empower our fellow human beings." Bloom sees crisis as opportunity, opportunity for the whole human race. In more than eighty short, fast chapters, insights appear suddenly, like the quick

bursts of flashbulbs, taking the reader on a sweeping tour of human history, from the Stone Age to the present. Every chapter conveys a radically new way to see the astonishing mechanism we call "Western Civilization." Bloom marvels at how humans have turned toxic waste into food and fuel, trash into treasure, and garbage into gold. He shows how we've produced material miracles based on immaterial things—passion, persistence, and fantasy. He shows that what many regard as the end is just the beginning. The beginning of something you've never before imagined. The author explains why the secret to capitalism's next great leap does not lie in new financial tricks, but in tapping things right under our noses in radically new ways—that is, tapping our imagination, our desire to feel useful, our desire to help others, and our desire to be recognized for contributing to the welfare of humanity. The key to next-generation capitalism lies in a big-picture view that's utterly unlike anything you've previously perceived. A big-picture view that will startle you. A big-picture view with which you can ignite the world, get a new handle on your life, and help transform society. This brilliant, inspirational work of daring ideas and breathtaking research offers more than hope. It offers unseen levels of understanding. Understanding that can literally redefine what it means to be a human being.
