"When we decided to write a nursing textbook, we wanted it to be written to the entry-level student, not about the student. We

designed it so that students could truly understand what they are reading without the need for prior nursing experience or knowledge. We wrote it to guide the student in developing simple problem-solving skills and then progressing to clinical judgment in real-world nursing. Our aim is to teach students to understand and connect the what, why, and how of safe and effective care"--

`This book makes an important contribution to the growing literature in the health promotion arena, with its comprehensive coverage of contemporary philosophical, research and practice issues. The healthy public policy chapter provides the best treatment of this topic I have read' - Professor Maurice B Mittelmark, University of Bergen, Norway and President of the International Union of Health Promotion and Education `This book advances a fresh proposition, rather than rehashing the standard theories that we have read endless times... it sets out a "New Health Education", which has shaken off its victim blaming shackles, and focus on individual behaviour, to truly complement the aims of health promotion' - National Oral Health Promotion Group Journal `This book advances a fresh proposition, rather than rehashing the standard theories that we have read endless times... it sets out a "New Health Education", which has shaken off its victim blaming shackles, and focus on individual behaviour, to truly complement the aims of health promotion' `Keith Tones has, over the years, provided a solid theoretical framework for health promotion, with successive texts on the subject. This latest publication continues the trend, with a systematic layout and thorough review of health promotion issues... The text has a wide appeal to a wider audience, ranging from public health practitioners and health promotion specialists, to health and

social care students at postgraduate level' - RCN Research Headlines 'Whether you are a student exploring health promotion for the first time, or an experienced practitioner developing your knowledge, this text will provide you with a clear and comprehensive resource... this is not a heavy tome full of complex language; rather it is a very articulate examination of a wide range of aspects of health promotion, presented in a clear and easily understood way' - Journal of Community Nursing Health Promotion is written for all professionals who strive to improve the health of others. Beginning with a critical appraisal of the concept itself, the book outlines new models for defining 'health promotion' and sets out the factors involved in planning health promotion programmes that work. The authors describe detailed strategies for action and show how these can be applied within a range of contexts and settings. In an attempt to bridge the gap that persists between ideological perspectives and practical implementations, they delve beyond the rhetoric of empowerment and show how it can be incorporated into practice. Focusing particularly on the synergistic relationship between policy and education, the book re-appraises the notion of health education - an idea which has become marginalised in recent years - and shows the fundamental importance of education in creating individual choice and generating effective advocacy for social change. The question of 'evidence' is central to the text and the book concludes by examining methods of evaluation and the role it plays in creating more effective health promotion programmes.

People in many cultures have long been aware of themselves as having a spirit as well as body and as being influenced by spiritual energies and spiritual presences. Nurses know that something exists beyond the day-to-day care of people. Nurses are with people in time of crisis, when the mind turns to thoughts of what exists beyond. When a nurse can help someone to confront issues of doubt and belief, the sense of fulfilment explains why nurses do what they do. Spirituality: The Heart of Nursing is written by Australian nurses, from their own experience, for the benefit of other nurses. The message of the book is that nurses are special people conscious that our spiritual well-being is just as important as our physical health.

"Over 1.2 million people die each year on the world's roads, and between 20 and 50 million suffer non-fatal injuries. In most regions of the world this epidemic of road traffic injuries is still

increasing. In the past five years most countries have endorsed the recommendations of the World report on road traffic injury prevention which give guidance on how countries can implement a comprehensive approach to improving road safety and reducing the death toll on their roads. To date, however, there has been no global assessment of road safety that indicates the extent to which this approach is being implemented. This Global status report on road safety is the first broad assessment of the status of road safety in 178 countries, using data drawn from a standardized survey conducted in 2008. The results provide a benchmark that countries can use to assess their road safety position relative to other countries, while internationally the data presented can collectively be considered as a global "baseline" against which progress over time can be measured"-- Executive summary.
