The circular economy  
offer opportunities to

reduce resource use and waste whilst providing business opportunities. This is also true in the mobile phone industry that has been characterised by high rates of product obsolescence. The emergence of the smart phone has changed the

landscape, making repair, refurbishment and resell attractive to businesses and consumers. Moreover, emerging modular phone design should allow functional upgrades with low resource wastage. This report investigates the adoption of circular business models within

Nordic markets. Producers, retailers, refurbishers, recyclers and resellers tell of their motivation, experiences and the challenges that they face. A special look is taken at consumer and waste law and the challenges and opportunities they represent. The report ends with 17 policy proposals that can accelerate the adoption of circularity in the sector. Packed with tested strategies and practical tips, this book is the essential, life-changing guide for everyone who owns a smartphone. Is your phone the first thing

you reach for in the morning and the last thing you touch before bed? Do you frequently pick it up “just to check,” only to look up forty-five minutes later wondering where the time has gone? Do you say you want to spend less time on your phone—but have no idea how to do so without giving it up completely? If so, this book is your solution. Award-winning journalist Catherine Price presents a practical, hands-on plan to break up—and then make up—with your phone. The

goal? A long-term relationship that actually feels good. You’ll discover how phones and apps are designed to be addictive, and learn how the time we spend on them damages our abilities to focus, think deeply, and form new memories. You’ll then make customized changes to your settings, apps, environment, and mindset that will ultimately enable you to take back control of your life. *The Unauthorized Guide to iPhone, iPad, and iPod Repair* Mondraim Nig.

An investigation of the causes and consequences of the strange, ambivalent, and increasingly central role of infrastructure repair in modern life. Infrastructures--communication, food, transportation, energy, and information--are all around us, and their enduring function and influence depend on the constant work of repair. In this book, Christopher Henke and Benjamin Sims explore the causes and consequences of the

strange, ambivalent, and increasingly central role of infrastructure repair in modern life. Henke and Sims offer examples, from local to global, to investigate not only the role of repair in maintaining infrastructures themselves but also the social and political orders that are created and sustained through them.

 Communities of repair in Kampala salvage phones; they bring dead ones back to life and rework

recycled ones to operate with unfamiliar networks. How do these communities of repair congeal around the mobile phone? How do they form and develop? How is 'repair' understood and negotiated? The 'moment' of mobile phone repair exposes the multi-layered physical and social relationships that underpin mobile telephony in Kampala. Mobile phone workshops provide a rich and productive terrain for thinking about both the sociality and materiality of

human-technology relations. Multi-sited ethnographic fieldwork of markets and small, informal businesses will enable the detailed exploration of socio-technical assemblages of mobile phone 'maintenance' and 'repair'. Perhaps the Kampalan 'repair cultures' can also suggest some new approaches towards computing and telephony in mature markets globally, particularly with reference to the growing problem of e-waste. The Ugandan proliferation of

mobile repair businesses gives an insight into a new paradigm for computing, where hard and software are left more radically open to upgrade, and companies move towards a role of service provision (Graham and Thrift 2007: 19).

This book draws on the perspectives of non-migrants and urban youth in Bamenda, in the Northwest region of Cameroon, as well as on the views of Cameroonian migrants in Switzerland, to explore the meaning

and role of New Media in the negotiation of sociality in transnational migration. New Media facilitated connectedness serve as a privileged lens through which Cameroonians, home and away, scrutinise and mediate sociality. In this rich ethnography, Bettina Frei describes how the internet and mobile phones are adopted by migrants and their non-migrant counterparts in order to maintain transnational relationships, and how the specific medialities of

these communication technologies in turn impact on transnational sociality. Contrary to popular presumptions that New Media are experienced as mainly connecting and enabling, this study reveals that in a transnational context in particular, New Media serve to mediate tensions in transnational social ties. The expectations of being connected go hand in hand with an awareness of social and geographical distance and separation.

Despite the advancements made by Information and Communication Technologies in several international development sectors, further evidence is needed on how mobile phone technology is reaching women, improving their learning, and providing them with new opportunities and better living conditions.

Can mobile phones develop women's literacy and strengthen their capability to choose and benefit from wider educational, social and decent work opportunities that can improve their lives? Based on a cross-analysis of nine mobile learning projects in three world regions, this publication sheds light on the extent to which mobile phones can enhance women's literacy and lead to their empowerment. The challenges encountered among the nine projects

reviewed and the recommendations derived from these experiences provide a way forward for policy-makers and practitioners in the conceptualization and implementation of quality mobile learning as part of women's human development.

Urbanisation and climate  
change are pushing cities  
to find novel pathways  
leading to a sustainable

future. The urban context may be viewed as a new experimentation space to accelerate the transition to a circular economy. Urban symbiosis and the circular economy are emerging concepts attracting more and more attention within the urban context. Moreover, new business models are emerging around sharing and peer-to-peer practices, which are challenging existing roles of actors in society. These developments are having an important impact on the flows of resources and

the use of the city infrastructure, and each research area has taken a different perspective in the analysis of such impacts. This Special Issue aims to explore what a “circular city” could constitute and how and why cities engage in circularity. This Special Issue includes seven high-quality papers on the theories and practices of circular cities. Actors, concepts, methods, tools, the barriers to and enablers of circular cities are discussed and a solid base and inspiration for

the future development of circular cities are provided.
