"Stuart Fox, Ph.D., wrote the first edition (published 1983) to help students understand the concepts of human physiology, and this objective has remained the guiding principle through all of the

subsequent editions. All editions have been lauded for their readability, the currency of the information, and the clarity of the presentation. The fifteenth edition continues this tradition by presenting human physiology in the most current, readable, and student-oriented way possible. This milestone edition is marked by a unique cover, the addition of a Digital Author, a new art program, and the updating of terminology and content. It takes a village! To create this landmark fifteenth edition, Stuart had the support of Krista Rompolski as the Digital Author and a superb team at McGraw-Hill Education and MPS Limited. This team includes Michael Ivanov, Fran Simon, Andrea Eboh, Kelly Hart, Jessica Portz, Christina Nelson, Joan Weber, Angela FitzPatrick, Amy Reed, Jim Connely, Kristine Rellihan, Matt Backhaus, and Lori Hancock. We are all incredibly grateful to the many reviewers who provided their time and expertise to critically examine individual chapters and be Board of Advisor partners. These"--

Body by Design defines the basic anatomy and physiology in each of 11 body systems from a creational viewpoint. Every chapter explores the wonder, beauty, and creation of the human body, giving evidence for creation, while exposing faulty evolutionistic reasoning. Special explorations into each body system look closely at disease aspects, current events, and discoveries, while profiling the classic and contemporary scientists and physicians who have made remarkable breakthrough in studies of the different areas of the human body. Body by Design is an ideal textbook for Christians

high school or college students. It utilizes tables, graphs, focus sections, diagrams, and illustrations to provide clear examples and explanations of the ideas presented. Questions at the end of each chapter challenge the student to think through the evidence presented.

A groundbreaking look at marriage, one of the most basic and universal of all human institutions, which reveals the emotional, physical, economic, and sexual benefits that marriage brings to individuals and society as a whole. The Case for Marriage is a critically important intervention in the national debate about the future of family. Based on the authoritative research of family sociologist Linda J. Waite, journalist Maggie Gallagher, and a number of other scholars, this book's findings dramatically contradict the anti-marriage myths that have become the common sense of most Americans. Today a broad consensus holds that marriage is a bad deal for women, that divorce is better for children when parents are unhappy, and that marriage is essentially a private choice, not a public institution. Waite and Gallagher flatly contradict these assumptions, arguing instead that by a broad range of indices, marriage is actually better for you than being single or divorced—physically, materially, and spiritually. They contend that married people live longer, have better health, earn more money, accumulate more wealth, feel more fulfillment in their lives, enjoy more satisfying sexual relationships, and have happier and more successful children than those who remain single, cohabit, or get divorced. The Case for Marriage combines clearheaded analysis, penetrating cultural criticism, and practical advice for strengthening the institution of marriage, and provides clear, essential guidelines for reestablishing marriage as the foundation for a healthy and happy society. "A compelling defense of a sacred union. The Case for Marriage is well written and well argued, empirically rigorous and learned, practical and commonsensical." -- William J. Bennett, author of *The Book of Virtues* "Makes the absolutely critical point that marriage has been misrepresented and misunderstood." -- *The Wall Street Journal* www.broadwaybooks.com

The first part of the book covers the theories of the emotions of Plato and Aristotle and later ancient views from Stoicism to Neoplatonism (Ch. 1) and their reception and transformation by early Christian thinkers from Clement and Origen to Gregory of Nyssa, Cassian and Augustine (Ch. 2). The basic ancient alternatives were the compositional theories of Plato and Aristotle and their followers and the Stoic judgement theory. These were associated with different conceptions of philosophical therapy. Ancient theories were employed in early Christian discussions of sin, Christian love, mystical union, and other forms of spiritual experience. The most influential theological themes were the monastic idea of supernaturally caused feelings and Augustine's analysis of the relations between the emotions and the will. The first part of Ch. 3 deals with the twelfth-century reception of ancient themes through monastic, theological, medical, and philosophical literature. The subject of the second part is the theory of emotions in Avicenna's faculty psychology, which, to a great extent, dominated the philosophical discussion of emotions in early thirteenth century. This approach was combined with Aristotelian ideas in later thirteenth century, particularly in Thomas Aquinas' extensive taxonomical theory. The increasing interest in psychological voluntarism led many Franciscan authors to abandon the traditional view that emotions belong only to the lower psychosomatic level. John Duns Scotus, William Ockham and their followers argued that there are also emotions of the will. Chapter 4 is about these new issues introduced in early fourteenth-century discussions, with some remarks on their influence on early modern thought.
