#### AIRCRAFT ACCIDENT REPORTS

Ian Allen Pub

This is a completely new and revised edition of the General Aviation Handbook, long overdue since it has been over 10 years since the last edition was published. This edition is fully revised and updated and contains 10 years worth of updated material, including the addition of a number of manufacturers and aircraft which were omitted from earlier editions for various reasons. Aircraft new to this edition include the so-called "heavy microlights", which are now an important part of the worldwide light aircraft scene. About 90 percent of the photos are new, and larger page size provides greater space for large data tables and photos. Previous editions have been strong sellers; this is the main reference book on this important sector of the aviation world, and this new edition will be welcomed by both aviation enthusiasts and those involved in the aviation industry.

The Lloyd's Register of Shipping records the details of merchant vessels over 100 gross tonnes, which are self-propelled and sea-going, regardless of classification. Before the time, only those vessels classed by Lloyd's Register were listed. Vessels are listed alphabetically by their current name.

The 55th edition of the yearbook contains statistics on the external trade performances of 179 individual countries or reporting customs areas, in terms of current value, volume and price; the importance of trading partners; and the significance of individual commodities imported and exported for the year 2005. The yearbook is published in two volumes containing i) data tables for individual countries or areas, and ii) data tables for the total trade of certain commodities analysed by regions and countries. In this edition, commodities are classified according to SITC Revision 3, and regional groupings are given in accordance with the regions used in the framework of the Millennium Development Goal (MDG) Indicator Database.

*Including Physical and Chemical Properties, Engine Performance, Economics, Patents, and Books* International Trade Statistics Since the first days of rivalry between the Wright Brothers and Glenn Curtiss, aircraft manufacturers have been vying for lucrative military aircraft contracts and competing for prized long-term production runs. As a result, many advanced and now legendary aircraft have been designed, built, and flown in every generation of aviation development. Focusing on the Cold War era, this book shows readers how crucial fly-off competitions have been to the development of America's military air arsenal. This book not only explains in detail how fly-off competitions are conducted, it shows the reader what both competing aircraft designs looked like during their trials, and then what the losing aircraft would have looked like in operational markings had it actually won. Described in vivid detail are the specific aircraft and how they fared, as well as the inside political maneuvering and subterfuge involved in often-controversial aircraft contract awards. Beginning with the Boeing B-47 Stratojet's decisive victory over rival Convair and Martin designs and ending with today's advanced unmanned aerial marvels, this book covers every era of Post-World War II aviation. Author Erik Simonsen uses the wonders of modern digital photography to create highly believable images of aviation's most tantalizing 'might have beens.'
