CHAMBERS PATRICK

Manuale di economia e politica agraria Routledge

Between 1909-17, Gustavo Del Vecchio developed a 'theory of circulation'. In a series of articles he set out his thoughts on the utility and value of money, credit, discount rates, banking and international payments. Tusset re-evaluates Del Vecchio's theory, concluding that money represents a technology which organizes both economy and society.

Nuovo manuale di sociologia Edizioni Studio Tesi

This book discusses the history of economic theories, drawing largely from periodical literature, which is often hard to obtain. The book is divided into sections along linguistic lines (German,

MANUALE DI ECONOMIA POLITICA : (CONTINUAZIONE E FINE)

Springer

Time Time b a Space Space Time Time c d Space Space Fig. 1 Different possible scales for growth and innovation analyses spatial dimension, the sectoral dimension and the time dimension are represented. In Fig. 1a, regional development analyses are revealed, where the economy is sliced vertically into regions and their dynamics are investigated. The study of the evolution of industries, typical of evolutionary industrial economics, is represented in Fig. 1b, where the economy is divided horizontally into sectoral slices. This approach has progressed considerably in recent years (see Malerba 2006, for a recent survey). Modifications of industries have important spatial implications, which however are not normally at the core of these analyses even though spatial patterns of

innovation differ greatly from sector to sector (Breschi 2000). Our approach operates in the manner of Fig. 1a and we will focus on regions, extending the analysis to industries only where this is regionally and structurally relevant. Hence, the approach in the book belongs to the tradition of regional development theories, but, in contrast to the more traditional analyses, we will not consider the region as an economic unit per se. Rather, interactions between and within regions are very relevant to the performance of individual regions in an integrated world and will be at the core of the analyses of the following chapters.

Associazionismo economico e diffusione dell'economia politica nell'Italia dell'Ottocento Giuffrè Editore

URBAN HERITAGE MANAGEMENT

FrancoAngeli

Il testo è rivolto agli studenti dei corsi di laurea di Economia, Giurisprudenza, Scienze Politiche, Sociologia che devono superare l'esame di Economia politica. Utile supporto al manuale istituzionale, ma anche alla preparazione di concorsi pubblici. È strutturato in modo tale che ogni capitolo sia corredato da un questionario e da una mappa concettuale; è consigliato per il ripasso della Microeconomia e della Macroeconomia.

Compendium of Applied Economics (Global Capitalism) FrancoAngeli

This book provides a comprehensive methodological and philosophical inquiry into, and a comprehensive scientific analysis of, the fundamental economic dynamics of capitalism as a world system.

Elementi di economia del turismo FrancoAngeli

The first of an eight-volume series, The Literature of the Agricultural Sciences, this book analyzes the trends in the published literature of agricultural economics and rural sociology during the past fifty years. It uses citation analysis and other bibliometric techniques to identify the primary journals, report series, and monographs of current importance to the developed industrial countries as well as those in the Third World.

dalle società economico-agrarie alle associazioni di economisti Routledge

In order to ensure their immediate survival, humans accept any sacrifice at the expense of their surrounding ecosystem. Sustainability is the key to build and harmony between our development and the consumption of our planet's limited resources. Mindful of their past mistakes, developed countries should try and lead underdeveloped areas to a sustainable growth, finding compromises, making sacrifices and not exporting their worst practices, like speculating on the desperate need for survival of others, but their best ones instead. Such responsibility would be facilitated by a change coming from the bottom, a change in the aspirations of individuals and communities. The city, a urban ecosystem, is indeed the starting point of such changes. By interpreting these general targets, this paper aims at practically achievable actions that individuals can carry on in the urban environment, with a basic support by local authorities, to improve the socio-economic livability of

their communities, considering ecological balance, well-being and technological progress. Turkey is a very interesting country, a growing economy and a melting pot of Western and Islamic culture. With a special look on this land, the actions that we've focused on concern: a. Sustainable mobility - introducing an approach to improve mobility in cities like Istanbul, as well as a model of sustainable mobility for the whole country. b. Cultural heritage, economic development and value creation - improving Turkish enormous cultural heritage through management renewal and the adoption of advanced technologies such as 3D. These two fields, are very much interlaced when considering urban development and sustainability. One stimulates territorial identification, the other allows to reach it. The global crisis we are witnessing today is not just a matter of ecology; it has to do with our lifestyles, the way we developed and how we manage our resources. The opportunity to rediscuss the principles of growth can be used to counter the enduring international economic crisis through the rediscovery of those values concerning the sustainable quality of life we need to aim at for our future development.

The Paretian Tradition During the Interwar Period Maggioli Editore

The years in-between the two World Wars were a crucial period for the building of economic dynamics as an autonomous field. Different competing research programs arose at international level. Great progress was achieved by studies on the business cycle, with the first statistical applications. Outside the theory of the business cycle, a significant line of inquiry was that pursued at the end of the 1930s by Hicks and Samuelson. This period also saw the formulation of another approach to formal economic dynamics which in the 1930s represented the frontier of research from the analytical point of view. It was an approach which set the notion of equilibrium at the basis of dynamics, exactly as in the case of statics, thus leading to the definition of a dynamic equilibrium approach. The aim of this volume is to take into consideration this original research field sparked from Pareto's works and initially developed during the 1920s in the United States by two American mathematicians, G. Evans and C. Ross. In the 1930s, the concept of dynamic equilibrium became the main research field of the Pareto school which gave its most important contributions in this field. The Paretian economists as Amoroso, de Pietri Tonelli, Sensini, and the younger, such as Bordin, Palomba, La Volpe, Fossati and Zaccagnini, for the most part students of the former, developed this approach in many directions. The theory of dynamic equilibrium reached remarkable results from an analytical viewpoint through the wide application of the functional calculus, thus anticipating a perspective which was taken into consideration in the 1960s with the theory of optimal growth. Despite the Pareto school's relevance, it remained widely unknown, not only at international level, but also in Italy. Recently, it has been object of renewed interest. This present work aims at reconstructing the fundamental contributions offered by the Pareto school in forming the economic dynamics theory.

Manuale di scienza delle finanze FrancoAngeli

Questo libro definisce le condizioni e le modalità per individuare, promuovere e attuare un massiccio piano di investimenti pubblici e privati, nazionali, regionali e locali, che operi come "motore trainante" del rilancio della crescita e dell'occupazione.

A look at Turkey FrancoAngeli

The book studies the origins and evolution of economic textbooks in the nineteenth and early

twentieth century, up to the turning point represented by Paul Samuelson's *Economics* (1948), which became the template for all the textbooks of the postwar period. The case studies included in the book cover a large part of Europe, the British Commonwealth, the United States and Japan. Each chapter examines various types of textbooks, from those aimed at self-education to those addressed to university students, secondary school students, to the short manuals aimed at the popularisation of political economy among workers and the middle classes. An introductory chapter examines this phenomenon in a comparative and transnational perspective.

This book explores the in-depth relationship between historic-cultural heritage and landscape, urban, and regional planning. It analyzes recent cultural and discipline positions and addresses research to interpret legacy values and the necessity for conservation within the urban setting. It also presents a method that helps urban planners to implement the suggestions, based on extensive knowledge of topographic methods and urban archaeology, to enhance the shaping and planning of the historic and present-day city. A rapid evolution of techniques and methods that provide innovative planning instruments and contribute to conservation projects involving cities and territories is now being witnessed in urban planning. Actors involved in the planning process use an organic and multidisciplinary vision of techniques and methods to understand the relation between the historic-cultural goods and their settlement context. Through urban archaeology it is now possible to orient—in a systematic way—interventions in the historic centers of European cities and document the origin and evolution of the urban shape, to reconcile renewal demand and preservation of ancient heritage.

La raccolta di saggi contenuta in questo libro è dedicata al ricordo di due economisti dell'Università degli Studi di Genova. Nella prima parte, in omaggio al Maestro, alcuni suoi allievi tratteggiano la figura del professor Vittorio Sirotti, danno conto del Suo impegno in qualità di Preside dell'ex-Facoltà di Economia e Commercio e ne illustrano la raffinata pedagogia dell'attività didattica e l'acutezza della ricerca scientifica contenuta in due piccoli libri, pubblicati entrambi nel 1965. Il primo di essi sintetizza in maniera esemplare i concetti e le relazioni della moderna macroeconomia keynesiana, mentre il secondo affronta l'analisi della definizione e della misura del progresso tecnico. Nella seconda parte, in ricordo di un discepolo, oltre al ritratto che ne dà lo stesso professor Sirotti, sono inclusi due saggi di Luciano Stella che, a distanza di molti anni, mantengono intatta la loro attualità. La prefazione di A.Philip Thirlwall al libro di Stella sulle teorie dell'aggiustamento della bilancia dei pagamenti e la postfazione di Giorgio Rampa arricchiscono e completano la raccolta di saggi di questo libro.

Agricultural Economics and Rural Sociology libreriauniversitaria.it Edizioni

Many important economic and political debates today refer to the nature and the role of the State: should governments intervene in the economy and interfere with the operation of markets? In which occasions, and how? In order to better understand these questions and the controversies they have raised, this book re-considers the debates crucial for the issues at stake, the most important schools of thought, and the central concepts in an historical perspective. After a tribute to Sir Alan Peacock and the first publication of two hitherto unpublished papers written in the 1950s, the chapters focus on important developments that occurred in Europe during the 19th and early 20th centuries. The final part includes contributions on public economics after World War II, focusing on concepts such as merit goods, externalities and the "Coase theorem". This book was originally published as a special issue of *The European Journal of the History of Economic Thought*.
