Changing Structure of American  
Agriculture Routledge

The future sustainable economic development and well-being of citizens in South East Europe depend on greater economic competitiveness. Reinforcing the region's economic potential in a post-COVID-19 context requires a holistic, inclusive and growth-oriented approach to policy making.

Shipping World & Shipbuilder Springer

The Veterans Health Administration (VHA) is America's largest integrated health care system, providing care at 1,243 health care facilities, including 172 medical centers and 1,063 outpatient sites of care of varying complexity, serving 9 million enrolled Veterans each year. In addition, VHA has opened outpatient clinics and established telemedicine and other services to accommodate a diverse veteran population and continues to cultivate ongoing medical research and innovation. Facilities specific to VHA fulfill clinical, operational, research laboratory, and administrative functions. Each site is designed to serve a geographical location with specific health care needs. VHA's building inventory has sites of different ages, and often there is a mix of building size and age at each site or campus. At the

request of the VHA, this study presents a comprehensive resource planning and staffing methodology guidebook for VHA Facility Management Programs by reviewing the tasks of VHA building facilities staff and recommending actions for the VHA to meet the mission goals of delivering patient care, research, and effective operations.

## **GIS AND ENVIRONMENTAL MODELING**

Springer Science & Business Media  
Authors have attempted to create coherent chapters and sections on how the fundamentals of maintenance cost should be organized, to present them in a logical and sequential order.

Necessarily, the text starts with importance of maintenance function in the organization and moves to life cycle cost (LCC) considerations followed by the budgeting constraints. In the process, they have intentionally postponed the discussion about intangible costs and downtime costs later on in the book mainly due to the controversial part of it when arguing with managers. The book will be concluding with a short description of a number of sectors where maintenance cost is of critical importance. The goal is to train the readers for a deeper study and understanding of these elements for decision making in maintenance, more specifically in the context of asset management. This book is intended for managers, engineers, researchers, and practitioners, directly or indirectly

involved in the area of maintenance. The book is focused to contribute towards better understanding of maintenance cost and use of this knowledge to improve the maintenance process. Key Features:

- Emphasis on maintenance cost and life cycle cost especially under uncertainty.
- Systematic approach of how cost models can be applied and used in the maintenance field.
- Compiles and reviews existing maintenance cost models.
- Consequential and direct costs considered.
- Comparison of maintenance costs in different sectors, infrastructure, manufacturing, transport.

#### Maintenance Costs and Life Cycle Cost Analysis AMACOM

The main objective of CSAIT 2013 is to provide a forum for researchers, educators, engineers and government officials involved in the general areas of Computational Sciences and Information Technology to disseminate their latest research results and exchange views on the future research directions of these fields. A medium like this provides an opportunity to the academicians and industrial professionals to exchange and integrate practice of computer science, application of the academic ideas, improve the academic depth. The in-depth discussions on the subject provide an international communication platform for educational technology and scientific research for the world's universities, engineering field experts, professionals and business executives.

A comprehensive look at the impact of technology on facility managers Facility managers are tasked with operating and maintaining the built environment. Technology plays a big role in this function, and often facility managers are asked to install, implement, and work

with a variety of technologies without any prior experience in information technology. *Technology for Facility Managers* presents the cutting-edge technology that facility managers will come across in their careers. Each chapter covers a different technology and includes an overview and basic primer about the technology—the current use of the technology, how it's evolving, and how it will impact the practice of facility management in the future—and is complemented with case studies that address how the technology was implemented and the effect it had on the organization. Technologies covered include: Building information modeling (BIM) Building automation systems (BAS) FM automation (CAFM/IWMS) Condition assessment/life cycle analysis Radio frequency identification (RFID) Geographic information systems (GIS) Social networking Sustainability and energy analysis Information and communications technology (ICT) Workflow technology that supports standards such as Business Process Modeling Notation (BPMN) and those developed by the Workflow Management Coalition (WfMC) *Technology for Facility Managers* is appropriate as a textbook for IFMA Accredited Degree Programs and as a resource for professionals studying for certification through IFMA.

*Federal Information Sources and Systems* Springer

This report provides a summary for FY-2008 of activities, analyses and products from the Material Transportation, Storage and Disposal (M-TSD) sub-task of Systems Analysis within the Advanced Fuel Cycle Research & Development area of the Global Nuclear Energy Partnership. The objective of this work is to evaluate near-term material management requirements for initial

GNEP facilities and activities, long-term requirements for large-scale GNEP technology deployment, and alternatives and paths forward to meet these needs. For FY-08, the work expanded to include the Integrated Waste Management Strategy as well as integration with the newly formed Waste Forms Campaign. The M-TSD team was expanded with the addition of support from Savannah River National Lab (SRNL) to the existing team of Lawrence Livermore National Lab (LLNL), Argonne National Lab (ANL), Idaho National Lab (INL), Sandia National Lab (SNL) and University of Nevada - Reno (UN-R). During the first half of the year, analysis was focused on providing supporting technical analysis and documentation to support anticipated high-level decisions on program direction. A number of analyses were conducted and reports prepared as program deliverables. This work is briefly summarized in this report. Analyses provided informally to other program efforts are included in this report to provide documentation. This year-end summary was planned primarily as a compilation of activities following the anticipated programmatic decisions. These decisions were deferred beyond the end of the year, and funds were reallocated in a number of areas, thus reducing the M-TSD activities. This report summarizes the miscellaneous 'ad-hoc' work conducted during the later part of the year, such as support to the draft Programmatic Environmental Impact Statement (PEIS), and support to other program studies. Major programmatic contributions from the M-TSD team during the year included: (1) Completion of the IWMS in March 2008 as the baseline for waste management calculations for the GNEP Programmatic Environmental Impact Statement (PEIS).

The IWMS represents a collaborative effort between the Systems Analysis, Waste Forms, and Separations Campaigns with contributing authors from multiple laboratories. The IWMS reference is: 'Global Nuclear Energy Partnership Integrated Waste Management Strategy, D. Gombert, INL, et al, GNEP-WAST-WAST-AI-RT-2008-000214, March 2008'. (2) As input to the IWMS and support for program decisions, an evaluation of the current regulatory framework in the U.S. pertaining to the disposal of radioactive wastes under an advanced nuclear fuel cycle was completed by ANL. This evaluation also investigated potential disposal pathways for these wastes. The entire evaluation is provided in Appendix A of this report. (3) Support was provided to the development of the GNEP Programmatic Environmental Impact Statement from INL, SNL and ANL M-TSD staff. (4) M-TSD staff prepared input for DSARR (Dynamic Systems Analysis Report for Nuclear Fuel Recycle) report. The DSARR is an INL led report to examine the time-dependent dynamics for a transition from the current open fuel cycle to either a 1-tier or 2-tier closed fuel cycle. Section 5.3 Waste Management Impacts was provided to INL for incorporation into the DSARR. (5) SNL M-TSD staff prepared a M2 milestone report 'Material Transportation, Storage and Disposal Contribution for Secretarial Decision Package'. The report purpose was to comprehensively evaluate and discuss packaging, storage, and transportation for all potential nuclear and radioactive materials in the process and waste streams being considered by the GNEP program. In particular, a systems view was used to capture all packaging, storage, and transport operations

needed to link the various functional aspects of the fuel cycle. (6) SRNL M-TSD staff developed a deliverable report 'Management of Decay Heat from Spent Nuclear Fuel'. This report evaluated a range of options for managing the near-term decay heat associated with Cs and Sr in spent nuclear fuel (SNF) reprocessing wastes. (7) M-TSD staff participated in a series of meetings of the US-Japan GNEP Working Group on Waste Management, developing the content for the first deliverable of the working group.

Advanced Maritime Technologies and Applications Papers from the ICMAT 2021 This book describes the latest methods and tools for the management of information within facility management services and explains how it is possible to collect, organize, and use information over the life cycle of a building in order to optimize the integration of these services and improve the efficiency of processes. The coverage includes presentation and analysis of basic concepts, procedures, and international standards in the development and management of real estate inventories, building registries, and information systems for facility management. Models of strategic management are discussed and the functions and roles of the strategic management center, explained. Detailed attention is also devoted to building information modeling (BIM) for facility management and potential interactions between information systems and BIM applications. Criteria for evaluating

information system performance are identified, and guidelines of value in developing technical specifications for facility management services are proposed. The book will aid clients and facility managers in ensuring that information bases are effectively compiled and used in order to enhance building maintenance and facility management.

Blockchain, Internet of Things, and Artificial Intelligence provides an integrated overview and technical description of the fundamental concepts of blockchain, IoT, and AI technologies. State-of-the-art techniques are explored in depth to discuss the challenges in

each domain. The convergence of these revolutionized technologies has leveraged several areas that receive attention from academicians and industry professionals, which in turn promotes the book's accessibility more extensively. Discussions about an integrated perspective on the influence of blockchain, IoT, and AI for smart cities, healthcare, and other business sectors illuminate the benefits and opportunities in the ecosystems worldwide. The contributors have focused on real-world examples and applications and highlighted the significance of the strengths of blockchain to transform the readers' thinking toward finding potential solutions. The faster maturity and stability of blockchain is the key differentiator in artificial intelligence and the Internet of Things. This book discusses their potent combination in realizing intelligent systems, services, and environments. The contributors present their technical evaluations and comparisons with existing technologies. Theoretical explanations and experimental case studies related to real-time scenarios are also discussed.

**FEATURES** Discusses the potential of blockchain to significantly increase data while boosting accuracy and integrity in IoT-generated data and AI-processed information. Elucidates definitions, concepts, theories, and assumptions involved in smart contracts and distributed ledgers related to IoT systems and AI approaches. Offers real-world uses of blockchain technologies in different IoT systems and further studies its influence in supply chains and logistics, the automotive industry, smart homes, the pharmaceutical industry, agriculture, and other areas. Presents readers with ways of employing

blockchain in IoT and AI, helping them to understand what they can and cannot do with blockchain. Provides readers with an awareness of how industry can avoid some of the pitfalls of traditional data-sharing strategies. This book is suitable for graduates, academics, researchers, IT professionals, and industry experts.

*Encyclopedia of Environmental Control Technology: Volume 7* National Academies Press

This book offers a state-of-the-art overview of on abiotic stresses in terms of the challenges; scope and opportunities; coping strategies for adaptation and mitigation using novel tools for building resilience in agricultural crops and livestock; as well as for policy implementation. Divided into four major parts: advances and prospects for understanding stress environments; adaptation and mitigation options; crop-based mitigation strategies; and mitigation options in animal husbandry, the book focuses on problem-solving approaches and techniques that are essential for the medium to long-term sustainability of agricultural production systems. The synthesis and integration of knowledge and experiences of specialists from different disciplines offers new perspectives in the versatile field of abiotic stress management, and as such is useful for various stakeholders, including agricultural students, scientists, environmentalists, policymakers, and social scientists.

### **THE IMPACT OF CUTTING-EDGE TECHNOLOGY ON FACILITY MANAGEMENT**

Springer Nature

Progress and Research Issues CRC Press  
 GIS and Environmental Modeling: Progress and Research Issues Michael F. Goodchild, Louis T. Steyaert, Bradley O. Parks, Carol Johnston, David Maidment, Michael Crane, and Sandi Glendinning, Editors With growing pressure on natural resources and landscapes there is an increasing need to predict the consequences of any changes to the environment. Modelling plays an important role in this by helping our understanding of the environment and by forecasting likely impacts. In recent years moves have been made to link models to Geographical Information Systems to provide a means of analysing changes over an area as well as over time. GIS and Environmental Modeling explores the progress made to date in integrating these two software systems. Approaches to the subject are made from theoretical, technical as well as data stand points. The existing capabilities of current systems are described along with important issues of data availability, accuracy and error. Various case studies illustrate this and highlight the common concepts and issues that exist between researchers in different environmental fields. The future needs and prospects for integrating GIS and environmental models are also explored with developments in both data handling and modelling discussed. The book brings together the knowledge and experience of over 100 researchers from academic, commercial and government backgrounds who work in a wide range of disciplines. The themes followed in the text provide a fund of knowledge and guidance for those involved in environmental modelling and GIS. The

book is easily accessible for readers with a basic GIS knowledge and the ideas and results of the research are clearly illustrated with both colour and black and white graphics.

## **THE CARE AND KEEPING OF CULTURAL FACILITIES**

Elsevier

Introduction to Facility Management is a comprehensive introduction to the dynamic and diverse field of facility management (FM). It answers questions such as: What is facility management? What does a facility management professional do? How can we classify facility management products and services? How do you set up a facility management organisation? How do you manage service processes using a master dashboard? Reflecting on current events, the book defines new and exciting roles for facility management professionals. This first international edition of the bestselling Dutch Basisboek Facility Management describes global trends and developments and international FM-standards and practices. With contributions of thought leaders, such as Diane Levine, Jens Schlüter, Michiel Bakker, Elizabeth Nelson, Nicolas White and Susanne Balslev Nielson, Introduction to Facility Management is the first international book on facility management, which is supplemented and commented on by facility management teachers and practitioners; intriguingly and enthusiastically describes the full scope of the FM-profession; provides a theoretical framework and insight into FM-practice. *Acronyms, Initialisms & Abbreviations Dictionary* AMACOM Div American Mgmt Assn  
 Loaded with procedures, checklists,

guidelines, samples, and templates, The Facilitator's Fieldbook covers all the key areas of successful team management, including establishing ground rules, planning meetings and agendas, brainstorming, resolving conflict, making decisions, and helping groups optimize their time. The completely revised third edition of this longtime go-to resource for novice and experienced facilitators provides new team-building exercises as well as updated information on virtual meetings, mediation, strategic planning, and much more. You'll also gain tips on maintaining the tone and flow of meetings, and will learn to determine when to delegate projects to individuals rather than assembling a group. Collaborative projects have become an increasingly prevalent feature of modern business strategies and workplace dynamics. But intentional, strategic facilitation is essential to making sure these groups and teams are effective. The Facilitator's Fieldbook provides readers the comprehensive tools and knowledge they need to help their teams--and, ultimately, their organizations--succeed.

Rowman & Littlefield

The deteriorating condition of federal facilities poses economic, safety, operational, and environmental risks to the federal government, to the achievement of the missions of federal agencies, and to the achievement of public policy goals. Primary factors underlying this deterioration are the age of federal facilities--about half are at least 50 years old--and decades of inadequate investment for their maintenance and repair. These issues are not new and there are no quick fixes. However, the current operating environment provides both the impetus and the opportunity to place

investments in federal facilities' maintenance and repair on a new, more sustainable course for the 21st Century. Despite the magnitude of investments, funding for the maintenance and repair of federal facilities has been inadequate for many years, and myriad projects have been deferred. Predicting Outcomes of Investments in Maintenance and Repair of Federal Facilities identifies processes and practices for transforming the current portfolio of federal facilities into one that is more economically, physically, and environmentally sustainable. This report addresses ways to predict or quantify the outcomes that can be expected from a given level of maintenance and repair investments in federal facilities or facilities' systems, and what strategies, measures, and data should be in place to determine the actual outcomes of facilities maintenance and repair investments.
