Sharks & Rays Roberts
Rinehart Publishers
A guidebook for the
naturalist, commercial
or recreational fisher,
outdoor enthusiast, or
beachgoer covers
almost all species of
sharks and rays that
can be found in Gulf
waters, and includes
information on
reproduction, sensory
systems, feeding, and
more.

**SHARKS AND RAYS
OF AUSTRALIA**

Food & Agriculture Org.
Clears up
misconceptions about
sharks, looks at

common species of
sharks and rays, and
describes their habits
and behavior

JHU Press
Much fear of sharks is
driven by media
reports or films that
sensationalize shark
attacks, despite the
rarity of such
occurrences. With
contributors ranging
from Briony Penn to
David Suzuki, Gary
Geddes and Michael
Nicoll Yahgulanaas,
this collection provides
the most accurate and
up-to-date information
on chondrichthyans in
British Columbia
waters, including
detailed species
descriptions and

identification information. Sharks, Skates, Rays and Chimeras of British Columbia presents sharks and their relatives as valuable members of our coastal fish community, worthy of respect, study, admiration, and protection.

Sharks, Skates, and Rays of the Carolinas Reef Sharks and Rays of the World

The definitive field guide to all the sharks, rays and chimaeras of the European Atlantic and Mediterranean The waters of the northeast Atlantic and Mediterranean Sea are home to an amazing variety of sharks, rays and chimaeras. This comprehensive and easy-to-use field guide covers all 146 species found in the

Mediterranean, the waters of the European Atlantic and Iceland, along all the Scandinavian coasts, in the Black Sea and as far south as the Canary Islands. Detailed species accounts describe key identification features, habitat, biology and status. Every species account comes with a colour distribution map, a depth guide, at-a-glance icons and colour illustrations. This must-have field guide also features illustrated key guides that enable you to accurately identify down to species, comparison plates of similar species, illustrations of eggcases where known and plates of teeth. The first field guide to cover all 146 species Features hundreds of

colour illustrations, photos, maps and diagrams Describes key features, habitat, biology and status Includes depth guides, at-a-glance icons, key guides and teeth plates Guide to the Sharks and Rays of Southern Africa Univ of California Press

This full-color field guide is the result of a collaborative project between the governments of the United States, Malaysia, Indonesia and Australia, and is funded by the National Science Foundation.

The first comprehensive reference on the sharks and rays of Borneo, it contains everything you need to know about recognizing and identifying the sharks, rays and chimaeras

caught and marketed in Indonesia. Its user-friendly layout contains information on identifying features, size, distribution, local common names, habitat, biology and conservation status of 118 species. It is an essential reference for all shark and ray enthusiasts - including local fishers and consumers, fisheries and conservation officers and scientists.

SHARKS AND RAYS

Voyageur Press (MN) Encourages a better understanding of these creatures, a chance to get closer to their real-life world, be it on a dive in their natural habitat or a visit to an aquarium.

FIELD IDENTIFICATION

**GUIDE TO THE
SHARKS AND RAYS
OF THE RED SEA
AND GULF OF ADEN**

Princeton University
Press

"Ebert has herein assembled an enormous body of knowledge about California's 43 shark species ranging from shark and human behavior to taxonomic minutiae, along with up-to-date explanations of their ecology, status and fisheries. More importantly, his Herculean effort includes the often-overlooked 25 species of skates, rays and chimaeras. That, along with the fine illustrations of Mat Squillante, should answer any question that a student, diver, natural history buff, or

recreational or commercial fisher might ask."—John E. McCosker, coauthor of *Great White Shark* "The timing of this publication is ideal given the status of some of California's elasmobranch populations and the need for a deeper understanding of their biology, ecology, and fishery management. The book is a comprehensive treatment—if one wants to find out the latest information on any species of shark or ray off California, this is the place to go. An outstanding work!"—Gregor M. Cailliet, Professor, Moss Landing Marine Laboratories, and Director, Pacific Shark Research Center

REEF SHARKS AND RAYS OF THE WORLD

Steve Parish

Examines the physical characteristics and behavior patterns of the great white shark and the Manta ray.

Suggested level: junior, primary, intermediate.

A Guide to Sharks & Rays Princeton

University Press

The Biology of Sharks and Rays is a comprehensive resource on the biological and physiological characteristics of the cartilaginous fishes: sharks, rays, and chimaeras. In sixteen

chapters, organized by theme, A. Peter Klimley covers a broad spectrum of topics, including taxonomy, morphology, ecology, and physiology. For example, he explains the body design of sharks and why the ridged, toothlike denticles that cover their entire bodies are present on only part of the rays' bodies and are absent from those of chimaeras. Another chapter explores the anatomy of the jaws and the role of the muscles and teeth in jaw extension, seizure, and handling of prey. The chapters are richly illustrated with pictures of sharks, diagrams of sensory organs, drawings of the body postures of sharks during threat and reproductive displays, and maps showing the

extent of the species' foraging range and long-distance migrations. Each chapter commences with an anecdote from the author about his own personal experience with the topic, followed by thought-provoking questions and a list of recommended readings in the scientific literature. The book will be a useful textbook for advanced ichthyology students as well as an encyclopedic source for those seeking a greater understanding of these fascinating creatures.

Underwater Predators
Tuttle Pub

This volume presents a fully illustrated field guide for the identification of the sharks and rays most relevant to the

fisheries of the Red Sea and Gulf of Aden. An extensive literature review and two field surveys in the region were carried out for the preparation of this document. A total of 49 sharks and 45 batoids reliably reported for the region are listed and those common in the fisheries or likely to be found through fisheries operations are fully treated. The guide includes sections on technical terms and measurements for sharks and batoids, and fully illustrated keys to those orders and families that occur in the region. Color plates for a large number of the species are included.

habitats.

Sharks and Rays
ProStar Publications
Successor to the

classic work in shark studies, *The Elasmobranch Fishes* by John Franklin Daniel (first published 1922, revised 1928 and 1934), *Sharks, Skates, and Rays* provides a comprehensive and up-to-date overview of elasmobranch morphology. Coverage has been expanded from anatomy to include modern information on physiology and biochemistry. The new volume also provides equal treatment for skates and rays. The authors present general introductory material for the relative novice but also review the latest technical citations, making the book a valuable primary reference resource. More than 200 illustrations

supplement the text. *Sharks, Skates, and Rays of the Gulf of Mexico: A Field Guide* Food & Agriculture Org. Examines the natural history and evolution of various species of sharks and rays, members of the same subclass, describing their physical characteristics, feeding, reproduction, and human encounters. *California Sharks and Rays* University of Chicago Press Rays are among the largest fishes and evolved from shark-like ancestors nearly 200 million years ago. They share with sharks many life history traits: all species are carnivores or scavengers; all reproduce by internal fertilisation; and all have similar

morphological and anatomical characteristics, such as skeletons built of cartilage. Rays of the World is the first complete pictorial atlas of the world's ray fauna and includes information on many species only recently discovered by scientists while undertaking research for the book. It includes all 26 families and 633 valid named species of rays, but additional undescribed species exist for many groups. Rays of the World features a unique collection of paintings of all living species by Australian natural history artist Lindsay Marshall, compiled as part of a multinational research initiative, the Chondrichthyan Tree of Life Project. Images sourced from around

the planet were used by the artist to illustrate the fauna. This comprehensive overview of the world's ray fauna summarises information such as general identifying features and distributional information about these iconic, but surprisingly poorly known, fishes. It will enable readers to gain a better understanding of the rich diversity of rays and promote wider public interest in the group. Rays of the World is an ideal reference for a wide range of readers, including conservationists, fishery managers, scientists, fishers, divers, students and book collectors.
