A change in the sequence of nucleotide bases in the DNA will result in a change in the sequence of the nucleotide bases in the mRNA and this may lead to a change in the sequence of the amino acids in the protein. This new sequence of amino acids in the protein could affect its function either positively or negatively. Chapter 1: An Introduction to Biology Questions and Study ... Evolution is the process of change in all forms of life over generations, and evolutionary biology is the study of how evolution occurs. Biological populations evolve through genetic changes that correspond to

changes in the organisms' observable traits. Genetic changes include mutations, which are caused by damage or replication errors in organisms' DNA. As the genetic variation of a population drifts randomly over generations, natural selection gradually leads traits to become more or less common.
