Black people are not dark-skinned white people, says advertising visionary Tom Burrell. In fact, they are a lot more. They are survivors of the Middle Passage and centuries of humiliation and deprivation, who have excelled against the odds, constantly making a way out of no way! Seminar paper from the year 2008 in the subject English Language and Literature Studies - Literature, grade: 2, University of Frankfurt (Main), language: English, abstract: Harry Potter is a heptalogy of fantasy novels by the English author Joanne K. Rowling about an adolescent boy named Harry Potter, first published in England in 1997. Harry Potter attends the Hogwarts School of Witchcraft and Wizardry, a boarding school for young wizards and witches. Up to his eleventh birthday his cruel relatives, the Dursleys, have raised the orphaned Harry. On this day he learns that he is a wizard and has been invited to attend Hogwarts. The story is mostly set on the school premises, with

each of the seven volumes describing a school year at Hogwarts and a year of Harry's growing-up. The main topic is Harry Potter's fight against the evil wizard Lord Voldemort who killed Harry's parents when he was still an infant. Throughout the story the Dark Lord Voldemort gains more and more power and tries to kill Harry several times. In Hallows the climax is reached and the final battle between Harry and Lord Voldemort which will decide the future of the wizarding world. The fight of good versus evil is one of the oldest topics of mankind. Starting with the original sin in the Garden of Eden this fight has dominated moral concepts of the Christian world ever since. This paper presents an analysis of how good and evil are portrayed and presented in the Harry Potter series. First, there is a description of Christian motifs in the series and how these motifs can be compared to certain characters in the books. Second, 'good' characters such as Harry's close friends Ron and Hermione, and Harry's mentor, Professor Dumbledore, are described and characterised as to why they are part of the 'good'. Third, the 'evil' opponents Draco Malfoy and the evil Dark Lord Voldemort are analysed as to how they exhibit 'evil' behaviour. The last chapter deals with the question of whether Harry Potter is 'good' or 'evil' as he does not always act as an exemplary student.

The digital transformation is in full swing and fundamentally changes how we live, work, and communicate with each other. From retail to finance, many industries see an inflow of new technologies, disruption through innovative platform business models, and employees struggling to cope with the significant shifts occurring. This Fourth Industrial Revolution is predicted to also transform Logistics and Supply Chain Management, with delivery systems becoming automated, smart networks created everywhere, and data being collected and analyzed universally. The Digital Transformation of Logistics: Demystifying Impacts of the Fourth Industrial Revolution provides a holistic overview of this vital subject clouded by buzz, hype, and misinformation. The book is divided into three themed-sections: Technologies such as self-driving cars or virtual reality are not only electrifying science fiction lovers anymore, but are also increasingly presented as cure-all remedies to supply chain challenges. In The Digital Transformation of Logistics: Demystifying Impacts of the Fourth Industrial Revolution, the authors peel back the layers of excitement that have grown around new technologies such as the Internet of Things (IoT), 3D printing, Robotic Process Automation (RPA), Blockchain or Cloud computing, and show use cases that give a glimpse about the fascinating future we can expect. Platforms that allow businesses to centrally acquire and manage their logistics services disrupt an industry that has been

relationship-based for centuries. The authors discuss smart contracts, which are one of the most exciting applications of Blockchain, Software as a Service (SaaS) offerings for freight procurement, where numerous data sources can be integrated and decision-making processes automated, and marine terminal operating systems as an integral node for shipments. In The Digital Transformation of Logistics: Demystifying Impacts of the Fourth Industrial Revolution, insights are shared into the cold chain industry where companies respond to increasing quality demands, and how European governments are innovatively responding to challenges of cross-border eCommerce. People are a vital element of the digital transformation and must be on board to drive change. The Digital Transformation of Logistics: Demystifying Impacts of the Fourth Industrial Revolution explains how executives can create sustainable impact and how competencies can be managed in the digital age - especially for sales executives who require urgent upskilling to remain relevant. Best practices are shared for organizational culture change, drawing on studies among senior leaders from the US, Singapore, Thailand, and Australia, and for managing strategic alliances with logistics service providers to offset risks and create cross-functional, cross-company transparency. The Digital Transformation of Logistics: Demystifying Impacts of the Fourth Industrial Revolution provides realistic insights, a ready-to-use knowledge base, and a working vocabulary about current activities and emerging trends of the Logistics industry. Intended readers are supply chain professionals working for manufacturing, trading, and freight forwarding companies as well as students and all interested parties.

The Trick with Sticks is an uplifting story about self-worth, acceptance, happiness, building confidence and that it is ok to be

different, but most of all, it is a story that helps demystify friendships and the formation of bonds. "The Trick with Sticks" is just one strategy to help children with friendships and bonds by creating a framework to understand and discuss social interactions. Friendships are a natural development process for most children, but there are some who find the development of friendships tricky. What draws children together? What keeps them together? What can parents, teachers or carers do to help children develop these friendships? What are these bonds and how can they be explained? There are many opportunities throughout the story for meaningful conversations, and the chance to reflect on the things that are happening in your child's life. This is so empowering for children who may be going through a tough time making friends or for a range of challenges such as bullying, self-esteem, self-worth, unhappiness, low confidence and acceptance of themselves and others. This is highly recommended for children with Autism Spectrum Disorder (ASD), as they can really struggle with friendships and can often miss social cues or miss opportunities to connect or they can make the same mistakes again and again. In addition to this, neuro-typical children often miss the clues on how to be inclusive and supportive of some of their friends and this concept will empower everyone.

For women, understanding how the brain works during the key stages of life - in utero, childhood, puberty and adolescence, pregnancy and motherhood, menopause and old age - is essential to their health. Dr Sarah McKay is a neuroscientist who knows everything worth knowing about women's brains, and shares it in this fascinating, essential book. This is not a book about the differences between male and female brains, nor a book using neuroscience to explain gender-specific behaviours, the 'battle of the sexes' or 'Mars-Venus' stereotypes. This is a book about what happens inside the brains and bodies of women as they move through the phases of life, and the unique - and often misunderstood - effects of female biology and hormones. Dr McKay give insights into brain development during infancy, childhood and the teenage years (including the onset of puberty) and also takes a look at mental health as well as the ageing brain.

The book weaves together findings from the research lab, case studies and interviews with neuroscientists and other researchers working in the disciplines of neuroendocrinology, brain development, brain health and ageing. This comprehensive guide explores the brain during significant life stages, including: In utero Childhood Puberty The Menstrual Cycle The Teenage Brain Depression and Anxiety Pregnancy and Motherhood Menopause The Ageing Brain

Social platforms such as MySpace, Facebook and Twitter have rekindled the initial excitement of cyberspace. Text-based, computer-mediated communication has been enriched with face-to-face communication such as Skype, as users move from desktops to laptops with integrated cameras and related hardware. Age, gender and culture barriers seem to have crumbled and disappeared as the user base widens dramatically. Other than simple statistics relating to e-mail usage, chatrooms and blog subscriptions, we know surprisingly little about the rapid changes taking place. This book assembles leading researchers on nonverbal communication, emotion, cognition and computer science to summarize what we know about the processes relevant to face-to-face communication as it pertains to telecommunication, including video-conferencing. The authors take stock of what has been learned regarding how people communicate, in person or over distance, and set the foundations for solid research helping to understand the issues, implications and possibilities that lie ahead.

Anesthesia Crash Course is uniquely positioned to address the needs of new trainees in anesthesia. This book is written in a conversational tone, avoiding unnecessary jargon and distilling the key concepts of anesthesia into easy-to-remember tidbits - an approach in increasing demand by medical students and junior physicians. The audience for this book is chiefly new anesthesia residents, interns, medical students who rotate through anesthesia services, and nurse anesthetists. By demystifying the world of anesthesia, it provides a welcome resource to medical students and RNs who are considering additional training in this popular but poorly understood specialty. Surgical residents who

feel they're not up to speed with what's happening on the other side of the "ether screen" would certainly also benefit from reading *Anesthesia Crash Course*. New anesthesia trainees face an extremely daunting learning curve. As they progress through training, they will read longer and more detailed treatises on every aspect of modern anesthesia. It is not realistic to imagine that someone might finish such a book in the first week of his or her training! *Anesthesia Crash Course* will serve as a bridge between a trainee's pre-anesthesia experience and more formal training. It can be read in the last month of internship, or in evenings while completing the first few weeks of anesthesia training. It can also serve as a medical student's accompaniment for a two-week anesthesia elective.

Combining ideas from philosophy, artificial intelligence, and neurobiology, Daniel Dennett leads the reader on a fascinating journey of inquiry, exploring such intriguing possibilities as: Can any of us really know what is going on in someone else's mind? What distinguishes the human mind from the minds of animals, especially those capable of complex behavior? If such animals, for instance, were magically given the power of language, would their communities evolve an intelligence as subtly discriminating as ours? Will robots, once they have been endowed with sensory systems like those that provide us with experience, ever exhibit

the particular traits long thought to distinguish the human mind, including the ability to think about thinking? Dennett addresses these questions from an evolutionary perspective. Beginning with the macromolecules of DNA and RNA, the author shows how, step-by-step, animal life moved from the simple ability to respond to frequently recurring environmental conditions to much more powerful ways of beating the odds, ways of using patterns of past experience to predict the future in never-before-encountered situations. Whether talking about robots whose video-camera "eyes" give us the powerful illusion that "there is somebody in there" or asking us to consider whether spiders are just tiny robots mindlessly spinning their webs of elegant design, Dennett is a master at finding and posing questions sure to stimulate and even disturb.
