CLINICAL CASES

Elsevier Health Sciences

This is new edition of the book previously called Acute Clinical Medicine in the highly popular Kumar and Clark family. Cases in Clinical Medicine covers in handbook form the complete range of acute medical conditions and problems that junior doctors are likely to encounter during the first years of training. It is divided into chapters reflecting core medical specialties - including infectious diseases; STD; gastroenterology; etc. Each chapter is then subdivided into case-based problems, such as (for example) pyrexia of unknown origin (under the Infectious Disease Group), HIV/Aids (under STD) and Vomiting and Weight Loss (under Gastroenterology). Each problem follows a standard pattern or template: it begins with a case history, and is accompanied by short, succinct text divided up by headings such as 'What are the commonest causes of...'; 'What factors predispose to...'. Where relevant there are also sections on pathology, pathophysiology and prognosis. Important points to note in the acute context are picked out in boxes ('Beware', 'Remember!' and 'Information') as are vital investigations. More than 200 cases

Making speedy and appropriate clinical decisions and then choosing the best course of action is an essential skill for doctors.

Exploring initial medical assessment, 100 Cases in Clinical Medicine presents 100 scenarios commonly seen by medical students and junior doctors in the emergency or outpatient department, on the ward, or in the community setting. Each case begins with a succinct summary of the patient's history, examination, and initial investigation. The text includes photographs where relevant and questions on the diagnosis and management of each case. The answers provide a detailed discussion on each topic, with further illustration where appropriate. Most of the cases included are common problems but the book also includes more unusual cases to illustrate specific points and to emphasize that rare things do present. The first 20 cases are arranged by systems; the next 80 are in random order because symptoms such as breathlessness and pain may relate to many different clinical problems in various systems. These true-to-life cases will teach students and junior doctors to recognize important clinical symptoms and signs and to develop the diagnostic and management skills needed for the cases they will encounter on the job.
