Nigel Calder, a diesel mechanic for more than 25 years, is also a boatbuilder, cabinetmaker, and machinist. He and his wife built their own cruising sailboat, Nada, a project they completed in 1984. Calder is author of numerous articles for *Yachting Monthly* and many other magazines worldwide, as well as the bestselling *Boatowner's Practical and Technical Cruising Manual* and *Boatowner's Mechanical and Electrical Manual*, both published by Adlard Coles Nautical. Here, in this goldmine of a book, is everything the reader needs to keep their diesel engine running cleanly and efficiently. It explains how diesel engines work, defines new terms, and lifts the veil of mystery that surrounds such engines. Clear and logical, this extensively illustrated guide will enable the reader to be their own diesel mechanic. As Nigel Calder says: 'there is no reason for a boatowner not to have a troublefree relationship with a diesel

engine. All one needs is to set the engine up correctly in the first place, to pay attention to routine maintenance, to have the knowledge to spot early warning signs of impending trouble, and to have the ability to correct small ones before they become large ones.'

This is a well known fact that the resources of mineral oils are depleting day-by-day, and the cost of exploration of the remaining reserves is bound to escalate. Moreover, the burning of fossil fuels increases the level of carbon-dioxide in the atmosphere causing the 'Green House' effect. In this context, a viable and sustainable alternative fuel is necessary to cater to a large fleet of automobiles across the world. The advent of bio-diesel has come to the rescue in such a warranting situation. Efforts are being made to streamline the systems to produce bio-diesels at economically viable rates and apply

them in running the diesel engines in lieu of petrodiesel. And the present study is an attempt in this direction. It seeks to exploit non-edible oil plants, especially Jatropha, mahua and palm, to replace diesel oil usage in the conventional diesel engines. Providing transesterification procedure for all the three non-edible oils, it deals with the heat release rate calculations based on the pressure data collected in the combustion chamber. It also extends discussion on the instrumentation and experimentation, as well as the results of the findings.

Porting heads is an art  
and science. It takes a  
craftsman's touch to  
shape the surfaces of the  
head for the optimal flow  
characteristics and the  
best performance. Porting  
demands the right tools,  
skills, and application of  
knowledge. Few other  
engine builders have the  
same level of knowledge  
and skill porting engine  
heads as David Vizard. All  
the aspects of porting  
stock as well as  
aftermarket heads in  
aluminum and cast-iron  
constructions are covered.  
Vizard goes into great  
depth and detail on  
porting aftermarket  
heads. Starting with the  
basic techniques up to  
more advanced  
techniques, you are  
shown how to port iron  
and aluminum heads as  
well as benefits of hand  
and CNC porting. You are  
also shown how to build a  
high-quality flow bench at  
home so you can test your  
work and obtain  
professional results.  
Vizard shows how to  
optimize flow paths  
through the heads, past  
the valves, and into the  
combustion chamber. The  
book covers blending the  
bowls, a basic porting  
procedure, and also  
covers pocket porting,  
porting the intake  
runners, and many

advanced procedures. These advanced procedures include unshrouding valves, porting a shortside turn from the floor of the port down toward the valve seat, and developing the ideal port area and angle. All of these changes combine to produce optimal flow velocity through the engine for maximum power.

#### Diesel Car Digest Adlard Coles

This book offers a comprehensive and timely overview of internal combustion engines for use in marine environments. It reviews the development of modern four-stroke marine engines, gas and gas-diesel engines and low-speed two-stroke crosshead engines, describing their application areas and providing readers with a useful snapshot of their technical features, e.g. their dimensions, weights, cylinder arrangements, cylinder capabilities, rotation speeds, and exhaust gas temperatures. For each marine engine, information is provided on the manufacturer, historical background, development and technical characteristics of the manufacturer's

most popular models, and detailed drawings of the engine, depicting its main design features. This book offers a unique, self-contained reference guide for engineers and professionals involved in shipbuilding. At the same time, it is intended to support students at maritime academies and university students in naval architecture/marine engineering with their design projects at both master and graduate levels, thus filling an important gap in the literature.

Modern Diesel Technology: *Diesel Engines* is an ideal primer for the aspiring diesel technician, using simple, straightforward language and a building block approach to build a working knowledge of the modern computer-controlled diesel engine and its subsystems. The book includes dedicated chapters for each major subsystem, along with

coverage devoted to dealing with fuel subsystems, and the basics of vehicle computer control systems. Fuel and engine management systems are discussed in generic terms to establish an understanding of typical engine systems, and there is an emphasis on fuel systems used in post-2007 diesel engines. Concluding with a chapter on diesel emissions and the means used to control them, this is a valuable resource designed to serve as a foundation for more advanced studies in diesel engine technology [Porsche 911, 1965-1989](#) Delmar Learning brings Chilton Automotive Repair Information into the 21st century with their new Chilton Total Car Care Consumer CD-ROMs. These CDs allow users to decide which specific Truck, Van, or Sport Utility Vehicle they will have access to from a selection of over 150 of the most popular vehicles on the road today.
