Modern Banking John Wiley & Sons
 The ongoing globalization of financial markets has increased the importance to users of financial services, policy-makers and financial analysts of understanding

the structure and operation of banking systems in other countries as well as that in their own country. This volume contributes to such an understanding. The structure and operation of the banking system are described for 10 important countries, plus the European Economic Community, under one cover. The contributing authors are knowledgeable and widely respected experts. The author, or at least one of the coauthors, of each chapter is a resident of the country described. Each chapter follows a broadly similar outline, although the attention devoted to any particular area varies substantially according to authors' perceptions of its relative importance in the particular country. The chapters spotlight the similarities and differences among the structures. The volume should serve as both a handy and authoritative reference guide for practitioners, regulators and students of international banking. An early benefit of the book was an international conference held in Chicago in the fall of 1989 on the world

integration of financial markets. A number of the authors of the chapters presented brief versions of their papers. The conference was sponsored jointly by the Federal Reserve Bank of Chicago and the MidAmerica Institute. The audience was primarily senior officers and regulators of financial institutions in the midwest. The conference generated considerable interest in both the subject matter and the contents of this book.

Competition in the Investment Banking Industry
Competition law underpins the market economy by prohibiting anti-competitive agreements and practices, and the abuse of dominant positions in the market. Until the financial crisis it was widely assumed that the financial services industry was highly competitive. This book explores the extent to which this is the case. By analysing crisis and pre-crisis competition law cases and examples from the UK, the EU and around the world, David Harrison asks whether there exists good reason for financial services to be treated differently from the rest of the market economy. The theory of market efficiency is not borne out in practice. He particularly draws upon John Maynard Keynes in examining the differences between price mechanisms in product markets for "normal" goods, and price mechanisms in financial and investment markets where expectations of the future tend to play a greater role, leading to greater price fluctuations. In this evaluation, the book examines aspects of the practical functioning of capital markets such as the phenomenon of herding behaviour by financial participants, how short-term behaviour by intermediaries can be to the disadvantage of savers and productive investment, the relationship between investment markets and product markets and the extent to

which the same competition rules apply to undertakings involved in both. The book will be invaluable to students, researchers and practitioners of banking and finance law, and commercial and competition law.

This paper revisits the competitive environment of the banking system in Latin America and the Caribbean (LAC) and investigates the early impact of fintech development in the region thus far. Against the backdrop of high net interest margins (NIMs) and limited financial depth in the region, panel regressions broadly confirm results of existing literature on the association of NIMs with the changes in the financial sector structure, including market concentration, administrative costs, and foreign banks, although differences between domestic and foreign banks narrowed after the 2008-09 Global Financial Crisis. Difference-in-difference regressions and case studies on Brazil and Mexico suggest that fintech is associated with a reduction in NIMs and defensive responses by incumbent banks that benefit consumers. The case studies also shed light on regulatory approaches and prudential considerations in fostering financial innovation and banking sector competition.

Modern Banking focuses on the theory and practice of banking, and its prospects in the new millennium. The book is written for courses in banking and finance at Masters/MBA level, or undergraduate degrees specialising in this area. Bank practitioners wishing to deepen and broaden their understanding of banking issues may also be attracted to this book. While they often have exceptional and detailed knowledge of the areas they have worked in, busy bankers may be all too unaware of the key broader issues. Consider the fundamental questions: What is unique about a bank? and What differentiates it from other financial institutions? Answering these questions begins to show how banks should evolve and adapt - or fail. If bankers know the underlying reasons for why profitable banks exist, it will help them to devise strategies for sustained growth. Modern Banking concludes with a set of case studies that give practical insight into the key issues covered in the book: The core banking functions Different types of banks and diversification of bank activities Risk management: issues and techniques Global regulation: Basel 1 and Basel 2. Bank regulation in the UK, US, EU, and Japan Banking in emerging markets Bank failure and financial crises Competitive issues, from cost efficiency to mergers and acquisitions Case Studies including: Goldman Sachs, Bankers Trust/Deutsche Bank, Sumitomo Mitsui, Bancamer

Controlling Capital examines three pressing issues in financial market regulation: the contested status of public regulation, the emergence of 'culture' as a proposed modality of market governance, and the renewed ascendancy of private

regulation. In the years immediately following the outbreak of crisis in financial markets, public regulation seemed almost to be attaining a position of command – the robustness and durability of which is explored here in respect of market conduct, European Union capital markets union, and US and EU competition policies. Subsequently there has been a softening of command and a return to public-private co-regulation, positioned within a narrative on culture. The potential and limits of culture as a regulatory resource are unpacked here in respect of occupational and organisational aspects, stakeholder connivance and wider political embeddedness. Lastly the book looks from both appreciative and critical perspectives at private regulation, through financial market associations, arbitration of disputes and, most controversially, market ‘policing’ by hedge funds. Bringing together a distinguished group of international experts, this book will be a key text for all those concerned with issues arising at the intersection of financial markets, law, culture and governance.

Investment banks play a critically important role in channeling capital from investors to corporations. Not only do they float and distribute new corporate securities, they also assist companies in the private placement of securities, arrange mergers and acquisitions, devise specialized financing, and provide other corporate financial services. After sketching the history and evolution of investment banking, the authors describe the structure of the industry, focusing on the competitive forces at work within it today. They explore patterns of concentration and analyze the strategic and economic factors that underlie those patterns. The authors directly examine the pairing up of investment banks with their corporate clients. They show that the market is sharply segmented, with banks and corporate clients being matched in roughly rank order, the most prestigious banks with the largest, most powerful clients, and so on. Vigorous competition occurs within each segment, but much less between them. With the industry now

confronting a changing regulatory environment, a growing tendency of clients to arrange their own financing, and increasing competition both from within and from commercial banks and foreign institutions, *Competition in the Investment Banking Industry* is essential reading for anyone interested in the future of investment banking.

A distinguished economist examines competition, regulation, and stability in today's global banks. Does too much competition in banking hurt society? What policies can best protect and stabilize banking without stifling it? Institutional responses to such questions have evolved over time, from interventionist regulatory control after the Great Depression to the liberalization policies that started in the United States in the 1970s. The global financial crisis of 2007–2009, which originated from an oversupply of credit, once again raised questions about excessive banking competition and what should be done about it. *Competition and Stability in Banking* addresses the critical relationships between competition, regulation, and stability, and the implications of coordinating banking regulations with competition policies. Xavier Vives argues that while competition is not responsible for fragility in banking, there are trade-offs between competition and stability. Well-designed regulations would alleviate these trade-offs but not eliminate them, and the specificity of competition in banking should be accounted for. Vives argues that regulation and competition policy should be coordinated, with tighter prudential requirements in more competitive situations, but he also shows that supervisory and competition authorities should stand separate from each other, each pursuing its own objective. Vives reviews the theory and empirics of banking competition, drawing on up-to-date analysis that incorporates the characteristics of modern market-based banking, and he looks at regulation, competition policies, and crisis interventions in Europe and the United States, as well as in emerging economies. Focusing on why banking competition policies are necessary, *Competition and Stability in Banking* examines regulation's impact on the industry's efficiency and effectiveness.

Mutual funds form the bedrock of retirement savings in the United States, and, considering their rapid growth, are sure to be more critical in the future. Because the size of fees paid by investors to mutual fund advisers can strongly affect the return on investment, these fees have become a contentious issue in Congress and the courts, with many arguing that investment advisers grow rich at the expense of investors. This groundbreaking book not only conceptualizes a new economic model of the mutual fund industry, but also uses this model to test for price competition between investment advisers, evaluating the assertion that market forces fail to protect investors' returns from excessive fees. Highly experienced authors track the growth of the industry over the past twenty-five years and present arguments and evidence both for and against theories of adviser malfeasance. The authors review the regulatory history of mutual fund fees and summarize leading case decisions addressing excessive fees. Revealing the extent to which the governance structure of mutual funds truly impacts fund performance, this book provides the best understanding of today's mutual fund industry and is a vital tool for investors, money managers, fund directors, securities lawyers, economists, and anyone concerned with the regulation of mutual funds.

The Changing Structure of American Banking John Wiley & Sons

Louis D. Brandeis was a Supreme Court Justice and a patriot. He wrote "Other People's Money and How Bankers Use It" to warn the American people about the greedy bankers that control the United States and drive us into financial ruin. The book attacked the use of investment funds to promote the consolidation of various industries under the control of a small number of corporations, which Brandeis alleged were working in concert to prevent competition. Brandeis harshly criticized investment bankers who controlled large amounts of money deposited in their banks by middle-class people. The heads of these banks, Brandeis pointed out, routinely sat on the boards of railroad companies and large industrial manufacturers of various products, and routinely directed the resources of their banks to promote the interests of their own companies. These companies, in turn, sought to maintain control of their industries by crushing small businesses and stamping out innovators who developed better products to compete against them. Brandeis supported his contentions with a discussion of the actual dollar amounts--in millions of dollars--controlled by specific banks, industries, and industrialists such as J. P. Morgan, noting that these interests had recently acquired a far larger proportion of American wealth than corporate entities had ever had before. He extensively cited testimony from a Congressional investigation performed by the Pujo Committee, named after Louisiana Representative Arsène Pujo, into self-serving and monopolistic business dealing. Chapter V of the book ("What Publicity Can Do") contains in its opening section a well-known line that has frequently been cited in support of regulation through disclosure obligations: "Sunlight is said to be the best of disinfectants; electric light the most efficient policeman."
