THE ORIGINS AND IMPORTANCE

OF AQUACULTURE
 EAquaculture Production
 Aquaculture In TheSalmon production dominates UK aquaculture, representing over 80% of the production both in volume and value, with most production concentrated in Scotland. Salmon is an anadromous fish (born in freshwater, spends most of its life at ssea and return to freshwater to spawn) and during the freshwater stages is

produced in hatcheries and nurseries, with seawater net-pen production used from ongrowing to harvest. Aquaculture in the UK; UK Aquaculture; Newcastle University Aquaculture production. The contribution of aquaculture to global supplies of fish, crustaceans, molluscs and other aquatic animals³ continues to grow, increasing from 3.9 percent of total

production by weight in 1970 to 27.1 percent in 2000 and 32.4 percent in 2004. Aquaculture continues to grow more rapidly than all other animal food-producing sectors. Aquaculture Production | The Fish Site Aquaculture production is defined as the cultivated fish and crustaceans taken from marine and inland waters and sea tanks. Aquaculture is seen as

playing a key role in many emerging economies, by virtue of its potential to contribute to increased food production while helping reduce pressure on fish resources. Fisheries - Aquaculture production - OECD Data Aquaculture will soon surpass wild fisheries as the main source of seafood. This reflects the transition which happened on land in the past with the evolution from

hunting to most growth plants.

AQUACULTURE STATISTICS FOR THE UK, WITH A FOCUS ON ENGLAND ...

Aquaculture is understood to mean the farming of aquatic organisms including fish,

molluscs, crustaceans and aquatic plants. Farming implies some form of intervention in the rearing process to enhance production, such as regular stocking, feeding, protection from predators, etc. Farming also implies individual or corporate ownership of the stock being cultivated.

WHERE ARE AQUACULTURE'S

UPCOMING INVESTMENT OPPORTUNITIES ...

The fisheries and aquaculture sector significantly expanded in the past decades and total production, trade and consumption reached an all-time record in 2018. However since early 1990s, most growth in production from the sector as a whole has been from aquaculture, while capture fisheries production

has been relatively stable, with some growth essentially concerning inland capture **Aquaculture Production | The Fish Site** "When we first started looking at aquaculture in 2011, we were primarily interested in investing in biomass," Aqua-Spark's Amy Novogratz told attendees at IntraFish's Seafood Investor Forum.
