Tamil Nadu Accident and Emergency Care Initiative has the following 6 Pillars1. Trauma CareTAEI Protocols for Pre Arrival Intimation, Referrals and Transfers. (Version 1.3)Page 8 of 342. Stroke Care3. Myocardial Infarction Care4. Care of Burns5. Care of Poison Victims6. PREM (Paediatrics)The Entire TimeLine From the moment of Incident to Discharge of the patient from theHospital after completion of treatment can be divided into various stages. These stages are for easeof understanding and are not discrete events. They overlap each other and happen simultaneouslyand the patient receives care in continuum. For Example, Triage and Primary Survey overlap.Primary Survey and Resuscitation happen together. It is again emphasised that the care the patientreceives is in continuum.Of the above, this booklet deal with the following in details1. RE.1 : Referral.2. HE.1 : Hospital Emergency Codes.

Do you know how to insert a part of a program into another program at the desired location? Background editing?? Using PCMCIA card??? Or, maybe, a simple task such as replacing G02 by G03 in the whole file???? When it comes to manual program entry on the machine, or searching / deleting / editing / copying / moving / inserting an existing program residing in the control memory or the PCMCIA card, most people resort to trial and error method. While they might be able to accomplish what they desire, the right approach would save a lot of their precious time. If this is exactly what you want, this book is for you. The information contained herein is concise, yet complete and exhaustive. The best part is that you can enjoy the convenience of having the wealth of useful information on editing techniques even on your smart phone which is always with you! You would often need to refer to it because it is not possible to memorize all the steps which are many a time too complex and devoid of common logic, so as to make the correct guess. The following excerpt from the book would give an idea of the methodical and step-by-step approach adopted in the book: Writing a file on the memory card: The following operation will save program number 1234 in the memory card, with the name TESTPRO: * Select the EDIT mode on the MOP panel. * Press the PROG key on the MDI panel. * Press the next menu soft key. * Press the soft key CARD. * Press the soft key OPRT. * Press the soft key PUNCH. * Type 1234 and press the soft key O SET. * Type TESTPROG and press the soft key F NAME. * Press the soft key EXEC. While the file is being copied on the memory card, the character string OUTPUT blinks at the lower right corner of the screen. Copying may take several seconds, depending on the size of the file being copied. If a file with file name TESTPROG already exists in the memory card, it may be overwritten unconditionally or a message confirming the overwriting may be displayed, depending on a parameter setting. In case of such a warning message, press the EXEC soft key to overwrite, and CAN soft key to cancel writing. However, system information such as PMC ladder is always overwritten unconditionally. The copied file is automatically assigned the highest existing file number plus one. The comment, if any, with the O-word

(i.e., in the first block of the program) will be displayed in the COMMENT column of the card directory. To write all programs, type -9999 as the program number. In this case, if file name is not specified, all the programs are saved in file name PROGRAM.ALL on the memory card. A file name can have up to 8 characters, and an extension up to 3 characters (XXXXXXXX.XXX). Repeat the last three steps to copy more files. Finally, press the CAN soft key, to cancel the copying mode and go to the previous menu.

NURSING BASICS FOR CLINICAL PRACTICE

From the foreword: "One of the High Line's powers is its ability to evoke time, to remind us of the changes we've experienced during our own lives, to bring forth echoes of the past, and to make us guess what life might be like years from now. I love the photos on these pages, because they have that power, too." --Joshua David, Co-Founder of the Friends of the High Line. Ten Avenues Press, in association with Friends of the High Line, announce the publication of *High Line Nudes*. In 2006, photographer Kevin McDermott took three of his friends up on the abandoned railroad tracks that would become New York City's High Line park to shoot a series of nudes. As McDermott states in his introduction, "at the time I took these photos, what I sought from its beauty was its sense of isolation, being alone, surrounded by nature in the middle of this metropolis." A decade later, this location is now one of the most visited tourist destinations in NYC and one of the largest real estate developments in the world. *High Line Nudes* captures a seemingly impossible, but beautiful moment in the history of the West Side Rail Yards, Chelsea and an ever changing New York City. The cloth hardcover book is beautifully printed in color and rich black and white duotone images.

Industrial radiography is a well-established non-destructive testing (NDT) method in which the basic principles were established many years ago. However, during 1993-95 the European Standards Organisation (CEN) commenced drafting many new standards on NDT including radiographic methods, and when completed these will replace national standards in all the EC member countries. In some cases these standards vary significantly from those in use in the UK at present. These CEN standards are accepted by majority, not unanimous voting, so they will become mandatory even in countries which vote against them. As most are likely to be legal by the time this second edition is published, they are described in the appropriate places in the text. The most important new technical development is the greater use of computers in radiology. In the first edition, computerized tomography was only briefly mentioned at the end of Chapter 11, as it was then largely a medical method with only a few equipments having found a place in industrial use. The method depends on a complex computer program and a large data store. Industrial equipments are now being built, although their spread into industry has been slow. Computer data storage is also being used for radiographic data. Small computers can now store all the data produced by scanning a radiographic film with a small light-spot, and various programs can be applied to these data.

Until recently professionalism was transmitted by respected role models, a method that depended heavily on the presence of a homogeneous society sharing values. This is no longer true, and medical schools and postgraduate training programs in the developed world are now actively teaching professionalism to students and trainees. In addition, licensing and certifying bodies are attempting to assess the professionalism of practising physicians on an ongoing basis. This is the only book available to provide guidance to those designing and implementing programs on teaching professionalism. It outlines the cognitive base of professionalism, provides a theoretical basis for teaching the subject, gives general principles for establishing programs at various levels (undergraduate, postgraduate, and continuing professional development), and documents the experience of institutions who are leaders in the field. Teaching aids that have been used successfully by contributors are included as an appendix.
