This study, by more than 130 contributors, assesses the moves to decentralize educational administration. The text contains overviews by individual authors, and joint papers forming dialogues between different academic contenders. It provides a survey of educational policies and planning, and an analysis of the changes in England and Wales. Curriculum control,

privatization and leadership issues are also debated. This book is one of four volumes which consider the educational dilemmas facing governments, professional educators and practising administrators in the current educational climate. The issues are addressed from international and comparative perspectives.

 My Revision Notes: Edexcel AS/A-level Geography
 Since the 1990s, new economic geography has received a lot of attention as mainstream economists such as

Krugman and others began to focus on where economic activity occurs and why. Coincidentally, international trade, location theory, and urban economics all appear to be asking the same question: where is economic activity located and why? The challenge is to explain the economic concentration or agglomeration of a large number of activities in certain geographical space. This volume breaks down the various types of cities and evaluates the key factors used to look at

cities, such as innovation, green growth, spatial concentration, and smart cities in order to understand how cities work. Why is it that certain cities attract talent? How do some cities become business hubs? Why is it that few cities become increasingly competitive while others remain stagnant? As development specialists are increasingly focusing on how to make cities competitive, this book can serve as a guide for providing key insights, backed by cases on how

cities can possibly become more competitive and productive.

This study deals with the development, existence, and dilemmas concerning European identity among youth in Europe. It compiles the results of a research conducted within

the Comenius project "Perception, Attitude, Movement - Identity Needs Action (PAM-INA)." The eight participating institutions in the PAM-INA project were from Germany, Slovenia, France, Greece, Poland, Northern Ireland (UK), Cyprus, and Sweden. The authors from the respective countries discuss the results and present their views on the issue of European identity and citizenship. (Series: Learning Europe. Simply stated, geography studies the locations of things and the explanations that underlie spatial distributions. Profound forces at work throughout the world have made geographical knowledge increasingly important for understanding numerous human dilemmas and our capacities to address them. With more than 1,200 entries, the Encyclopedia of Geography reflects how

the growth of geography has propelled a demand for intermediaries between the abstract language of academia and the ordinary language of everyday life. The six volumes of this encyclopedia encapsulate a diverse array of topics to offer a comprehensive and useful summary of the state of the discipline in the early 21st century. Key Features Gives a concise historical sketch of geography's long, rich, and fascinating history, including human geography, physical

geography, and GIS Provides succinct summaries of trends such as globalization, environmental destruction, new geospatial technologies, and cyberspace Decomposes geography into the six broad subject areas: physical geography; human geography; nature and society; methods, models, and GIS; history of geography; and geographer biographies, geographic organizations, and important social movements Provides

hundreds of color illustrations and images that lend depth and realism to the text Includes a special map section Key Themes Physical Geography Human Geography Nature and Society Methods, Models, and GIS People, Organizations, and Movements History of Geography This encyclopedia strategically reflects the enormous diversity of the discipline, the multiple meanings of space itself, and the diverse views of geographers. It brings

together the diversity of geographical knowledge, making it an invaluable resource for any academic library.
