 Dynamical Systems with Applications Using Mathematica® by ...  
 Definition. A Lyapunov function for an autonomous dynamical system  $\dot{x} = f(x)$  with an equilibrium point at  $x^*$  is a scalar function  $V(x)$  that is continuous, has continuous first derivatives, is strictly positive, and for which  $-\nabla V \cdot f$  is also strictly positive. The condition that  $-\nabla V \cdot f$  is strictly positive is sometimes stated as  $-\nabla V \cdot f$  is "locally positive definite", or ...
