This newest edition of Broadcast Journalism continues its long tradition of covering the basics of broadcasting from gathering news sources, interviewing, putting together a programme, news writing, reporting, editing, working in the studio, conducting live reports, and more. Two new authors have joined forces in this new edition to present behind the scenes perspectives on multimedia broadcast news, where it is heading, and how you get there. Technology is meshing global and local news. Constant interactivity between on-the-scene reporting and nearly instantaneous broadcasting to the world has changed the very nature of how broadcast journalists must think, act, write and report on a 24/7 basis. This new edition takes up this digital workflow and convergence. Students of broadcast journalism and professors alike will find that the sixth edition of Broadcast Journalism is completely up-to-date. Includes new photos, quotations, and coverage of convergent journalism, podcasting, multimedia journalism, citizen journalism, and more! **Basic Radio Journalism** Burns & Oates The life-long inventor, Lee de Forest

invented the three-element vacuum tube used between 1906 and 1916 as a detector, amplifier, and oscillator of radio waves. Beginning in 1918 he began to develop a light valve, a device for writing and reading sound using light patterns. While he received many patents for his process, he was initially ignored by the film industry. In order to promote and demonstrate his process he made several hundred sound short films, he rented space for their showing; he sold the tickets and did the publicity to gain audiences for his invention. Lee de Forest officially brought sound to film in 1919. Lee De Forest: King of Radio, Television, and Film is about both invention and early film making; de Forest as the scientist and producer, director, and writer of the content. This book tells the story of de Forest's contribution in changing the history of film through the incorporation of sound. The text includes primary source historical material, U.S. patents and richly-illustrated photos of Lee de Forest's experiments. Readers will greatly benefit from an understanding of the transition from silent to audio motion pictures, the impact this had on the scientific community and the popular culture, as well as the economics of the entertainment industry.

*King of Radio, Television, and Film*

Hastingshouse/Daytrips Publ.

Media Production is an introductory guide to radio, TV and film production techniques. Illuminating the step by step process from conception to delivery, from the initial brainstorm, through planning, research and editing, this book creates a guided structure to help students learn about media production. Aimed at those producing radio, film or TV productions for the first time, this book offers relevant advice which takes

account of the context in which students work and the type of equipment available to them. Supported by online resources, this textbook provides templates, notes and exercises to help students prepare for their own productions, as well as a video and audio library showcasing techniques, interviews and behind the scenes industry footage.

Study Guide for Radio-television and

Basic Electronics Taylor & Francis

Basic TV Technology is the essential

basic guide to the fundamentals

underlying all television and video

systems, written for students and

nontechnical professionals. You don't

need to have a math or science

background in order to understand this

explanation of how the principal pieces

of equipment work, what their functions

are, and how they are integrated to form

a complex video system. An

understanding of this material will be

necessary for you to succeed in the real

world, where one person often has to

perform many different roles and

functions within a production. Armed

with some basic technical background

information, you'll be more effective at

figuring out new applications and at

problem-solving. The fourth edition of

Basic TV Technology has been updated

to reflect the industry shift to digital

video and includes new information on

compression, television standards, LCD

displays, HD, and equipment. This book

features the accessible Media Manual

format, in which every topic is covered in

two pages: one of explanatory text and

one of figures. Need more information on

TV technologies, go to:

Basic Radio & Television, 2/E

Basic Radio Journalism is a working manual and practical guide to the tools and techniques necessary to succeed in radio journalism. It will be useful both to students starting a broadcasting career as well as experienced journalists wishing to develop and expand their skills. Based on the popular Local Radio Journalism, this book covers the core skills of news gathering, writing, interviewing, reporting and reading with extensive hints and tips. It outlines working practices in both BBC and commercial radio. There are revamped legal and technical sections as well as a new chapter on the journalist as programme producer. For the student, there is extensive advice about getting a job, marketing yourself and dealing with job interviews. The Foreword is by Lord Ryder of Wensum, vice chairman of the BBC.
