Set your pulse racing with this stunning visual guide to over 1000 pin-up machines - iconic symbols

of wanderlust, speed, and the open road. From Gottlieb Daimler's gas-powered "engine on a bicycle" which set fire to the seat on its first outing, to superbikes such as the Ducati 916, *Motorcycle: The Definitive Visual History* takes you on an enthralling tour of the bike's history. It shows you bikes that appeal to the head - practical forms of transport - and to the heart - a parade of classic pin-ups including cult machines such as the Honda RC30, the Triumph Bonneville, and the Harley-Davidson XR750. *Motorcycle: The Definitive Visual History* shows the brilliance and impracticality of different

designs and features detailed cross-sections of engines such as the air-cooled two-stroke. It explains how the great marques such as the Royal Enfield, the "legendary" Indian Scout, Vespa, and Norton all became household names. Whether you are a hardcore enthusiast or looking forward to your first machine, this is one title you cannot be without.

Use your dining room table to help you combat climate change. When you go to the supermarket to buy groceries, you probably don't think much about how everything got to the store. There are the farmers, the harvesting machines, the delivery trucks, the stockers, and countless other people involved in getting meats and produce and ice cream from where they're made to your kitchen. But there are many real costs involved--and most of them involve impacts to the environment more than to bank accounts. Food production contributes one-fourth of our global greenhouse gas emissions. This is a significant number that's part of the climate change conversation. But you can take a few small steps to help lower that number--and The Low-Carbon Cookbook will show you how. This book will include science-backed information on how to make the most-climate friendly choices--from examining the impact of the supply chain for the foods that end up on our plates to evaluating the carbon footprint of various plant-based options we have. The Low-Carbon Cookbook will also feature 140 plant-based recipes made almost exclusively with locally sourced ingredients. If you're looking for a way to combat climate change from your kitchen, this book will help you with your goals.

An increasing number of agencies, academic institutes, and governmental and industrial bodies are embracing the principles of sustainability in managing their activities. Life Cycle Assessment (LCA) is an approach developed to provide decision support regarding the environmental impact of industrial processes and products. LCA is a field with ongoing research, development and improvement and is being implemented world-wide, particularly in the areas of pavement, roadways and bridges. Pavement, Roadway, and Bridge Life Cycle Assessment 2020 contains the contributions to the International Symposium on Pavement, Roadway, and Bridge Life Cycle Assessment 2020 (Davis,

CA, USA, June 3-6, 2020) covering research and practical issues related to pavement, roadway and bridge LCA, including data and tools, asset management, environmental product declarations, procurement, planning, vehicle interaction, and impact of materials, structure, and construction. Pavement, Roadway, and Bridge Life Cycle Assessment 2020 will be of interest to researchers, professionals, and policymakers in academia, industry, and government who are interested in the sustainability of pavements, roadways and bridges.

It is a largely forgotten fact that Britain was the first industrialized country in the world, but Guy Martin - the cult motorcycle racer and mechanic - is about to remind us how the industrial revolution helped make Britain great. Guy shows how the discoveries made in the late 18th-19th centuries are to thank for the ease of our every day lives: in order to cook a bacon and egg sandwich in Industrial-era conditions, Guy has to restore a steam locomotive and railway to have the components delivered to the local shop; he has to bring a saw mill back into working order to be able to make a bicycle; he has to revamp a Victorian fishing trawler so he can cook himself some fish and chips, and when he decides to mow the lawn, he restores a Victorian botanical garden. After all that, he's in need of a holiday - so he sets to work restoring a Victorian holiday resort. Illustrated throughout with specially commissioned photography as well as historical images, Guy will take us through each project; his passion, enthusiasm and sheer inventiveness bringing a completely new perspective to the Industrial Revolution. He invites us to live it with him, to enjoy the nostalgia, marvel in the mechanics and learn from its legacy.

Katharine Susannah Prichard was born in 1883 to Australian parents then living in Fiji, but she grew up in Tasmania, lived for a while in both Melbourne and London before finally settling in Western Australia. She was one of the co-founders of the Communist Party of Australia in 1921, and her status as a communist and a female writer led to her being frequently under surveillance and harassment by the Australian police and other government authorities. She wrote *The Black Opal* in 1921, and the novel focuses on the very close-knit opal-mining community living and working on Fallen Star Ridge, a fictitious location set in New South Wales, Australia. Life is hard for the miners as their fortunes rise and fall with the amounts and quality of black opal they can uncover. Black opal is a beautiful mineral with fiery gleams of color, much valued for jewelry. Finding productive seams of such opal is a matter of both hard work and good luck. The novel is a well-drawn study of the relationships of the people living on the Ridge, and the two main characters are portrayed with clarity: Michael Brady, an older man much respected by the other miners for this knowledge and ethical approach, and Sophie Rouminof, a beautiful teenage girl who is the darling of the camp but who abruptly runs away to America after being disappointed in love. Despite the difficulties the individual miners face, there is a community spirit and an agreement on basic values and principles of behavior at the Ridge. But this community of shared endeavor is eventually jeopardized by the influence of outsiders, in particular an American who wishes to buy up the individual mines, operate them under a company structure, and simply pay the miners a salary. This conflict between capitalism and honest manual labour becomes one of the most important themes of the work. This book is part of the Standard Ebooks project, which produces free public domain ebooks.

The first GSX-R was created in 1985 as a groundbreaking departure from the ponderous sportbikes of the day. That revolutionary motorcycle took a time-honored racing credo to heart: light is right. (And another one: It can never be too fast.) Never before had the performance and design of a race bike been so faithfully carried over to the street. In the seven generations since, Suzuki has remained true to the concept of the original GSX-R: to build the most serious, track-worthy sportbike. What's more, the company's engineers have been relentless in their pursuit to refine and improve the bike.
