Fermentation Process Modeling Using

Takagi Sugeno Fuzzy Model The prediction accuracy and generalization of fermentation process modeling on exopolysaccharide (EPS) production from *Lactobacillus* are often deteriorated by noise existing in the corresponding experimental data. In order to circumvent this problem, a novel entropy-based criterion is proposed as the objective function of several commonly used modeling methods, i.e. Multi-Layer Perceptron (MLP) ... Fermentation process modeling of exopolysaccharide using ... The objective of this work is to present a Takagi-Sugeno (T-S) controller for temperature regulation in an alcoholic fermentation process. The controller gains are computed using the second Lyapunov method in order to provide closed loop stability. The starting point to design the controller is to select a non-linear mathematical model that represents adequately the process dynamics. Temperature control of an alcoholic fermentation process ... the fermentation process modeling [2]. In the last decade, artificial neural networks (ANNs) have been proved to be able to model nonlinear systems and successfully applied in various chemical and biological models [3]. Especially they have emerged as an attractive tool for predicting and approximating the parameters in fermentation process modeling of exopolysaccharide using ... In the case where the nonlinear model of the process is known, a fuzzy system may be used. A first approach can be done using the Takagi-Sugeno (TS) fuzzy model, (Takagi and Sugeno, 1985), where the consequent part of the fuzzy rules are replaced by linear systems. This can be attained, for example, using the method of sector nonlinearities TAKAGI-SUGENO MULTIPLE-MODEL CONTROLLER FOR A CONTINUOUS ... fermentation process modeling using
