**Crossing  
Critical  
Boundaries**

Oxford  
University  
Press  
This book  
brings  
together

scholars from a wide range of disciplines to creatively engage with place in the context of pedagogy. Beginning with an exploration of traditional place-based forms of education, such as outdoor

education, travel courses, and courses on sustainability, the authors go on to expand our popular notions of place, including the classroom, the campus, our interior selves, and our digital ecosystems. This

reconsideration of place-based education represents not only an engagement of prior literature on pedagogy and place, but also a re-imagining of the role that place might play in education. Authors stretch the notion of place, arguing for a holistic approach to disciplines in the humanities, social sciences, and natural sciences, bringing into focus an array of contentious

issues in philosophies and methods of teaching for multiple academic disciplines and their many intersections.

**INTERSECTIONS OF RACE, CLASS AND GENDER**

Oxford University Press Sociological literature tends to view the social categories of race, class and gender as distinct and has avoided discussing how multiple intersections inform and contribute to experiences of

injustice and inequity. This limited focus is clearly inadequate. Systemic Crises of Global Climate Change is an edited volume of 49 international, interdisciplinary contributions addressing global climate change (GCC) by intentionally engaging with the issues of race, gender, and class through an intersectional lens. The volume challenges and inspires readers to foster new

theoretical and practical linkages and think beyond the traditional, and oftentimes reductionist, environmental science frame by examining issues within their turbulent political, cultural, and personal landscapes. Varied media and writing styles invite students and educators to reflexively engage different, yet complementary, approaches to GCC analysis and interpretation, mirroring the disparate voices and viewpoints within the field. The second volume, Emergent Possibilities for Sustainability will take a similar approach but will examine the possibilities for solutions, as in the quest for global sustainability. This book is a valuable resource for academics, researchers and both undergraduate and post-graduate students in the areas of Environmental Studies, Climate Change, Gender Studies and International studies as well as those seeking a more intersectional analysis of GCC. Geotechnology and Sustainable Development Springer It must be acknowledged that any solutions to anthropogenic Global Climate Change (GCC) are interdependent and ultimately inseparable from both its causes and

consequences . As a result, limited analyses must be abandoned in favour of intersectional theories and practices. Emergent Possibilities for Global Sustainability is an interdisciplinary collection which addresses global climate change and sustainability by engaging with the issues of race, gender, and class through an intersectional lens. The book challenges readers to foster new

theoretical and practical linkages and to think beyond the traditional, and oftentimes reductionist, environmental science frame by examining issues within their turbulent political, cultural and personal landscapes. Through a variety of media and writing styles, this collection is unique in its presentation of a complex and integrated analysis of global climate change and its implications. Its companion

book, Systemic Crises of Global Climate Change, addresses the social and ecological urgency surrounding climate change and the need to use intersectionality in both theory and practice. This book is a valuable resource for academics, researchers and both undergraduate and post-graduate students in the areas of Environmental Studies, Climate

Change, Gender Studies and International studies as well as those seeking a more intersectional analysis of GCC.

Routledge  
The Art of Emergency charts the maneuvers of art through conflict zones across the African continent. Advancing diverse models for

artistic and humanitarian alliance, the volume urges conscientious deliberation on the role of aesthetics in crisis through intellectual engagement, artistic innovation, and administrative policy. Across Africa, artists increasingly turn to NGO sponsorship in pursuit of greater influence and funding, while simultaneously NGOs-both international and local-commission arts projects to buttress their

interventions and achieve greater reach and marketability. The key values of artistic expression thus become "healing" and "sensitization," measured in turn by "impact" and "effectiveness." Such rubrics obscure the aesthetic complexities of the artworks and the power dynamics that inform their production. Clashes arise as foreign NGOs import foreign aesthetic models and

preconceptions about their efficacy, alongside foreign interpretations of politics, medicine, psychology, trauma, memorialization, and so on. Meanwhile, each community embraces its own aesthetic precedents, often at odds with the intentions of humanitarian agencies. The arts are a sphere in which different worldviews enter into conflict and conversation. To tackle the

consequences of aid agency arts deployment, volume editors Samuel Mark Anderson and Chérie Rivers Ndaliko assemble ten case studies from across the African continent employing multiple media including music, sculpture, photography, drama, storytelling, ritual, and protest marches. Organized under three widespread yet under-analyzed

objectives for arts in emergency-demonstration, distribution, and remediation—each case offers a different disciplinary and methodological perspective on a common complication in NGO-sponsored creativity. By shifting the discourse on arts activism away from fixations on message and toward diverse investigations of aesthetics and power negotiations, *The Art of*

Emergency brings into focus the conscious and unconscious configurations of humanitarian activism, the social lives it attempts to engage, and the often-fraught interactions between the two. *Intersections of race, class and gender* Macmillan International Higher Education The Routledge Handbook of Gender and Agriculture covers major theoretical issues as well as critical

empirical shifts in gender and agriculture. Gender relations in agriculture are shifting in most regions of the world with changes in the structure of agriculture, the organization of production, international restructuring of value chains, climate change, the global pandemic, and national and multinational policy changes. This book provides a cutting-edge

assessment of the field of gender and agriculture, with contributions from both leading scholars and up-and-coming academics as well as policymakers and practitioners. The handbook is organized into four parts: part 1, institutions, markets, and policies; part 2, land, labor, and agrarian transformation; part 3, knowledge, methods, and access to information; and part 4,

farming people and identities. The last chapter is an epilogue from many of the contributors focusing on gender, agriculture, and shifting food systems during the coronavirus pandemic. The chapters address both historical subjects as well as ground-breaking work on gender and agriculture, which will help to chart the future of the field. The handbook has an international

focus with contributions examining issues at both the global and local levels with contributors from across the world. With contributions from leading academics, policymakers, and practitioners, and with a global outlook, the Routledge Handbook of Gender and Agriculture is an essential reference volume for scholars, students, and practitioners interested in gender and agriculture.

*CSR, Sustainability, and Leadership*  
Routledge  
This book sheds light on the management challenges of crisis and emergency response in an arctic environment. It explores how the complexity of the operational environment impacts on the risk of operations and addresses a need for tailor-made emergency response mechanisms. Through case studies of the

arctic environment, the book illustrates how factors such as nature, geography, demographics and infrastructure increase the complexity of crises in the Arctic and present a significant danger to life and health, the environment and values in challenging Arctic waters. The case studies lay a special focus on contextual factors including conflicting interests and different

stakeholder groups, as well as the institutional platforms influencing crisis response and emergency management. They also explore the implications for the managerial roles, the mode of operations, and the structuring of the organizations responsible for the emergency response. The necessity to facilitate cooperation across organizations and borders

and a need for organizational flexibility in large scale operations are also emphasized. Written in an accessible style, this book will make for a useful resource for undergraduate and postgraduate students of disaster and emergency management, as well as for professionals involved in emergency services.  
**Emergency Petroleum Supply Act**  
Food First Books  
In the last few

decades, many European and American cities and towns experienced economic, social and spatial structural change. Strategies for urban regeneration include investments in infrastructures for production, consumption and communication, as well as marketing and branding measures, and urban design schemes. Bringing together leading academics

from across a range of disciplines, including Douglas Kelbaugh, Ali Madanipour, Saskia Sassen, Gregory Ashworth, Nan Elin, Emily Talen, and many others, *Emergent Urbanism* identifies the specific issues dominating today's urban planning and urban design discourse, arguing that urban planning and design not only results from deliberate planning and design measures, but

how these combine with infrastructure planning, and derive from economic, social and spatial processes of structural change. Combining explorations from urban planning, urban theory, human geography, sociology, urban design and architecture, the volume provides a comprehensive and state-of-the-art overview, highlighting the complexities of these

interactions in space and place, process and design.

## EXPLORING RE-EMBODIMENTS

Routledge  
At a time when environmental and social stakes are at their highest - with rising crises and contradictions at the nexus of a building sense of environmental and social collapse - there are no easy solutions. *Global Im-Possibilities* explores just what can be

done around the world to ameliorate this dynamic. Using a range of essays and a multitude of case studies, this book explores what new lessons can be learned from examining the challenges and impediments to achieving just sustainabilities on the levels of policy, planning, and practice, and considers how these challenges and impediments can be addressed by individuals

and/or governments. Taking a nuanced approach to provide an intersectional analysis of a particular issue relating to the ideals for achieving sustainability, this book asserts that that it is only in recognizing such complexity that we can hope to achieve just sustainabilities.

**The Conservation and Development of Biophysical Resources**  
IGI Global

This successful book has been completely revised and updated and is a comprehensive overview of the principles and practices of planning rural and urban environments. Introducing general ideas rather than specific practices, the book assumes little prior knowledge and includes concise introductions to the nature and purpose of town planning; wildlife and landscape

protection; and pollution control. This edition pays particular attention to the scientific and social scientific background to environmental planning. Specific topics covered include: environmental ly-sustainable agriculture; mulit-purpose forestry; the management of designated areas; urban wildlife; land resource evaluation; and environmental impact assessment. The conclusion

reviews methods for managing information and making decisions.  
*Hearing Before the Committee on Energy and Natural Resources, United States Senate, One Hundred Third Congress, Second Session, on S. 2032, to Amend the Energy Policy and Conservation Act with Respect to Purchases from the Strategic Petroleum Reserve by Entities in the Insular Areas*

*of the United States, and for Other Purposes, May 24, 1994* IGI Global

The field of Environmental Management (EM) involves a broad and evolving repertoire of practices. The field originated around 1970 in response to new policy, regulation and public concern about environmental issues. EM has undergone many changes and improvements since then, progressing from a reactive, compliance-based focus toward, in leading cases, practices reflecting strong commitment to sustainability. And yet, EM remains, for the most part, ill-equipped to deal with the complex and highly uncertain implications of the ecological crisis. Environmental Management offers a rigorous critique of conventional EM and explores alternative ideas, frameworks and approaches that are currently considered "fringe", but which have the potential to transform the practice of EM. This book goes beyond narrow definitions and considers questions regarding the purpose, roles, scope and potential of environmental management. EM is situated and contextualized within the evolving and expanding realm of environment and

sustainability literature. The book argues that new approaches to EM need to be more flexible, imaginative and better equipped to address future environmental problems of a scale and severity previously unforeseen. This book will be of great interest to students and scholars of environmental management, environmental planning, resource management, and environmental assessment.

**Land Justice:**

**Re-imagining Land, Food, and the Commons**  
 Bloomsbury Publishing  
 This volume presents new theoretical approaches, methodologies, subject pools, and topics in the field of environmental anthropology. Environmental anthropologists are increasingly focusing on self-reflection - not just on themselves and their impacts on environmental research, but also on the reflexive

qualities of their subjects, and the extent to which these individuals are questioning their own environmental behavior. Here, contributors confront the very notion of "natural resources" in granting non-human species their subjectivity and arguing for deeper understanding of "nature," and "wilderness" beyond the label of "ecosystem services." By engaging in interdisciplinary efforts,

these anthropologists present new ways for their colleagues, subjects, peers and communities to understand the causes of, and alternatives to environmental destruction. This book demonstrates that environmental anthropology has moved beyond the construction of rural, small group theory, entering into a mode of solution-based methodologies and interdisciplinary theories for understanding

human-environmental interactions. It is focused on post-rural existence, health and environmental risk assessment, on the realm of alternative actions, and emphasizes the necessary steps towards preventing environmental crisis. *Urban Planning & Design in Times of Structural and Systemic Change* Routledge In Mindful Movement, exercise physiologist, somatic

therapist, dance educator and advocate Martha Eddy uses original interviews, case studies and practice-led research to define the origins of a new holistic field - somatic movement education and therapy - and its impact on fitness, ecology, politics, health, education and performance. The book reveals the role dance has played in informing and inspiring the historical and cultural

narrative of somatic arts – approaches to consciousness based in the awareness of the soma, the living body. Providing an overview of the antecedents and recent advances in somatic study and with contributions by diverse experts, Eddy highlights the role of Asian movement, the European physical culture movement as well as the language of neuroscience and their relationship to the

performing arts, and female perspectives in developing somatic movement, somatic dance, social somatics, somatic fitness, somatic dance and spirituality, and ecosomatics. Mindful Movement unpacks and helps to popularize awareness of both the body and the mind.

**Global  
Sustainability**  
Routledge  
In recent  
decades, the  
various  
strands of the  
food  
movement  
have made  
enormous  
strides in  
calling

attention the many shortcomings and injustices of our food and agricultural system. Farmers, activists, scholars, and everyday citizens have also worked creatively to rebuild local food economies, advocate for food justice, and promote more sustainable, agroecological farming practices. However, the movement for fairer, healthier, and more autonomous

food is continually blocked by one obstacle: land access. As long as land remains unaffordable and inaccessible to most people, we cannot truly transform the food system. The term land-grabbing is most commonly used to refer to the large-scale acquisition of agricultural land in Asian, African, or Latin American countries by foreign investors. However, land

has and continues to be “grabbed” in North America, as well, through discrimination, real estate speculation, gentrification, financialization, extractive energy production, and tourism. This edited volume, with chapters from a wide range of activists and scholars, explores the history of land theft, dispossession, and consolidation in the United States. It also looks at alternative ways forward

toward democratized, land justice, based on redistributive policies and cooperative ownership models. With prefaces from leaders in the food justice and family farming movements, the book opens with a look at the legacies of white-settler colonialism in the southwestern United States. From there, it moves into a collectively-authored section on Black Agrarianism, which details

the long history of land dispossession among Black farmers in the southeastern US, as well as the creative acts of resistance they have used to acquire land and collectively farm it. The next section, on gender, explores structural and cultural discrimination against women landowners in the Midwest and also role of “womanism” in land-based struggles. Next, a

section on the cross-border implications of land enclosures and consolidations includes a consideration of what land justice could mean for farm workers in the US, followed by an essay on the challenges facing young and aspiring farmers. Finally, the book explores the urban dimensions of land justice and their implications for locally-autonomous food systems, and lessons from previous

struggles for democratized land access. Ultimately, the book makes the case that to move forward to a more equitable, just, sustainable, and sovereign agriculture system, the various strands of the food movement must come together for land justice.

**Global Sustainability and Communities of Practice**

CRC Press  
A comprehensive overview of the

interdisciplinary field of Women's and Gender Studies, featuring original contributions from leading experts from around the world The Companion to Women's and Gender Studies is a comprehensive resource for students and scholars alike, exploring the central concepts, theories, themes, debates, and events in this dynamic field. Contributions from leading scholars and researchers

cover a wide range of topics while providing diverse international, postcolonial, intersectional, and interdisciplinary insights. In-depth yet accessible chapters discuss the social construction and reproduction of gender and inequalities in various cultural, social-economic, and political contexts. Thematically-organized chapters explore the development

of Women's and Gender Studies as an academic discipline, changes in the field, research directions, and significant scholarship in specific, interrelated disciplines such as science, health, psychology, and economics. Original essays offer fresh perspectives on the mechanisms by which gender intersects with other systems of power and privilege, the relation of androcentric approaches to science and gender bias in research, how feminist activists use media to challenge misrepresentations and inequalities, disparity between men and women in the labor market, how social movements continue to change Women's and Gender Studies, and more. Filling a significant gap in contemporary literature in the field, this volume: Features a broad interdisciplinary and international range of essays Engages with both individual and collective approaches to agency and resistance Addresses topics of intense current interest and debate such as transgender movements, gender-based violence, and gender discrimination policy Includes an overview of shifts in naming, theoretical approaches, and central

topics in contemporary Women's and Gender Studies Companion to Women's and Gender Studies is an ideal text for instructors teaching courses in gender, sexuality, and feminist studies, or related disciplines such as psychology, history, education, political science, sociology, and cultural studies, as well as practitioners and policy makers

working on issues related to gender and sexuality. Critical thinking and emerging practices Routledge With the acceptance of CSR and Sustainability as important business performance indicators, it is timely now to assess the impact that leadership has on the development of these processes. CSR, Sustainability, and Leadership seeks to explore the integration of

these three elements through an examination of concerns and trends in contemporary organisations. The authors discuss empirical and theoretical studies which focus on processes and practices which inform the field. Organisations wish not only to participate in responsible behaviour, but also actively lead within their local environments. However, businesses are failing in their execution of

CSR because of ineffective leadership. Business leaders are central to an organisation's purpose in the world and this book will inform a robust discussion about social issues which are pressing to scholars, policymakers, not-for-profit organisations and students. *Environmental Anthropology* Routledge Unprecedented levels of wealth, technology and institutional capacity can forge a just,

peaceful and ecologically resilient future. However, the authors argue, social polarization, geo-political conflict and environmental degradation are threatening the long-term well-being of humanity and the planet. Global Sustainability explores the alternative futures that could emerge from the resolution of these antagonisms. Based on extensive international and

interdisciplinary research, the book identifies the perils of market-driven scenarios and considers the possibility of the failure of conventional approaches. It also, however, presents a vision of the possibility of a 'Great Transition' in which revised human values and development goals bring a new stage of civilization. It will be essential reading for all scholars and professionals interested in the future of

the environment, international affairs, and sustainable development.

**ENVIRONMENTAL PLANNING**

SAGE Contributions to Law, Philosophy and Ecology: Exploring Re-Embodiments is a preliminary contribution to the establishment of re-embodiments as a theoretical strand within legal and ecological theory, and philosophy. Re-

embodiments are all those contemporary practices and processes that exceed the epistemic horizon of modernity. As such, they offer a plurality of alternative modes of theory and practice that seek to counteract the ecocidal tendencies of the Anthropocene. The collection comprises eleven contributions approaching re-embodiments from a multiplicity of fields,

including legal theory, eco-philosophy, eco-feminism and anthropology. The contributions are organized into three parts: 'Beyond Modernity', 'The Sacred Dimension' and 'The Legal Dimension'. The collection is opened by a comprehensive introduction that situates re-embodiments in theoretical context. Whilst closely bound with embodiment and new materialist theory, this book

contributes a unique voice that echoes diverse political processes contemporaneous to our times. Written in an elegant and accessible language, the book will appeal to undergraduates, postgraduates and established scholars alike seeking to understand and take re-embodiments further, both politically and theoretically. Exploring the Paradoxes of Just Sustainability Intellect

**Books**  
The authors provide both a realistic assessment of the contemporary efforts to perpetuate imperial domination and the various visions and strategies that could knit together global popular struggles into a vibrant, democratic, transnational movement for a humane and ecologically balanced world.
